RVTEC Nov, 2022 - Seattle, WA

Jules Hummon
University of Hawaii

Instrument = “**ADCP**”:

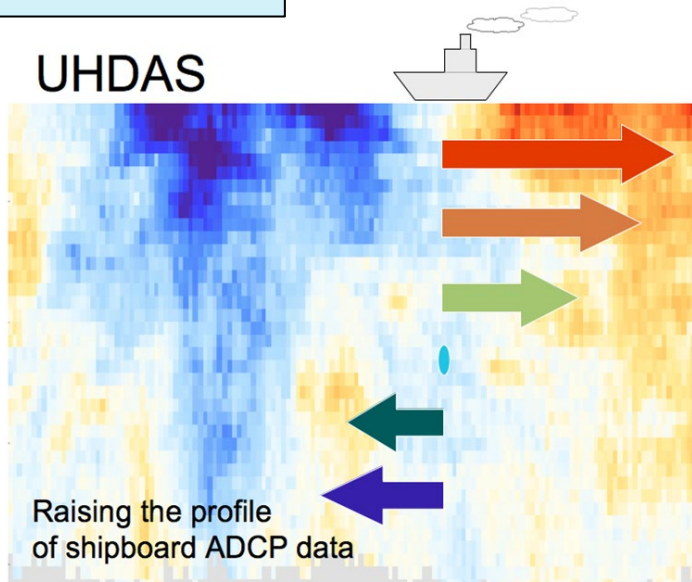

- **A**coustic **D**oppler **C**urrent **P**rofiler
- Use the Doppler return from 4 beams
- (+heading and position) to calculate a profile of ocean currents

Acquisition System = “**UHDAS**”:

University of **H**awaii **D**ata **A**cquisition **S**ystem

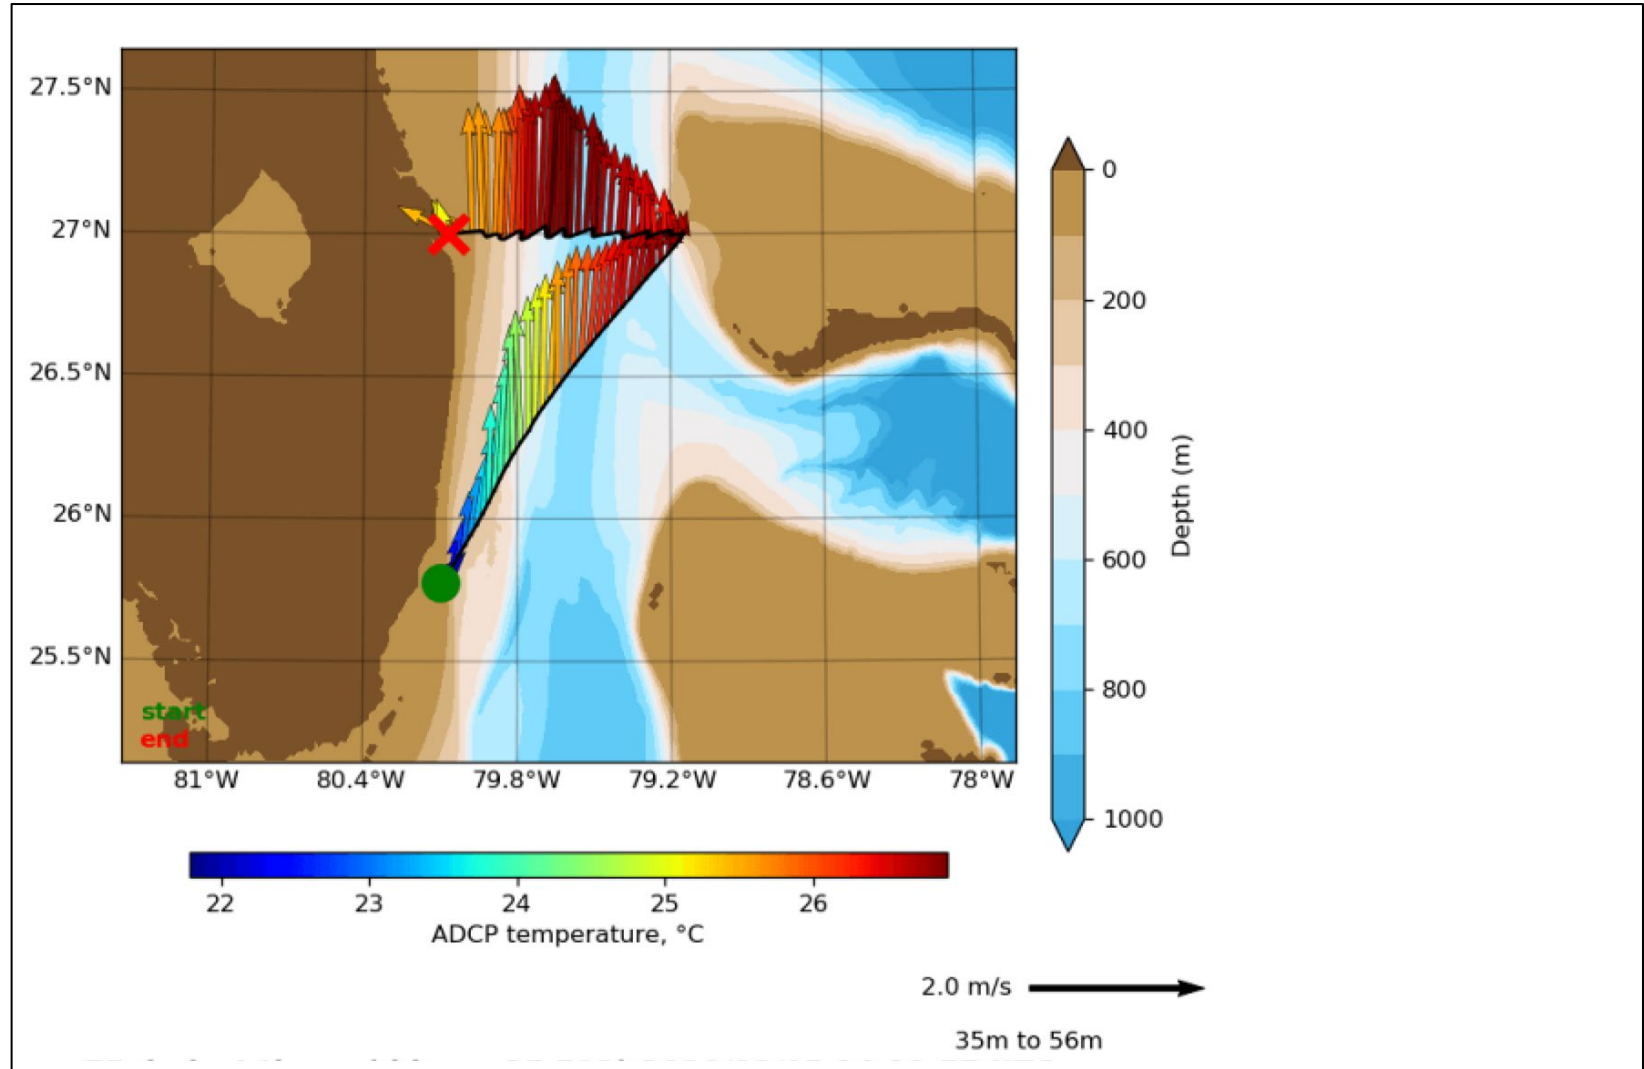

UHDAS Goals:

- reliable near real-time ocean currents at sea
- long-term utility of original and processed data

UHDAS+ADCP: What does it do?

Time,
ADCP
Position
Attitude

primitive data

ocean velocities

UHDAS+ADCP: what does it do?

- **Acquisition:** collect the data well
 - reliable, robust, duplicate feeds (ADCP, GPS, accurate heading)
- **Monitoring:** Keep it working well
 - daily scrutiny by UHDAS Team and people on shore (email)
 - at-sea web site has diagnostic plots
- **Processing:** provide access to data and plots at sea
 - Balance real-time output and post-cruise recovery
 - data access and figures in [at-sea web site](#)
 - Open Source code and [documentation](#)
- **Stewardship:**
 - improve QA, accessibility, visibility, understanding
 - rely on R2R and NCEI for conduit and archiving

At-sea web site overview

Various institutions or projects fund the “other” ships

UHDAS Systems Installed (2022)

- **17 UNOLS ships:** Atlantic Explorer, Neil Armstrong, Atlantis, Blue Heron, Endeavor, Hugh Sharp, Kilo Moana, Langseth, Pelican, R.Revelle, Sally Ride, Savannah, Sikuliaq, R.G.Sproul, Rachel Carson, T.G.Thompson, F.G.Walton Smith, - Oceanus, +Taani
- **3 polar ships:** Healy, L.M.Gould, N.B.Palmer
- **11 (+/-) NOAA ships:** Okeanos Explorer, F.Hassler, G.Gunter, H.Bigelow, N.Foster, Pisces, R.Brown, R.Lasker, Sette, B.Shimada, Dyson, +T.Jefferson
- **6 (+) International research ships:** Falkor (too), Pt Sur, Investigator, Kristine Bonnevie, Discovery, James Cook, G.O.Sars, Johan Hjort
- **3 (+/-) Volunteer Observing Ship:** Oleander, Bulk Xaymaca, Norrona, (RCCL Adventure of the Seas, RCCL Celebrity Flora)

2022: UHDAS recap

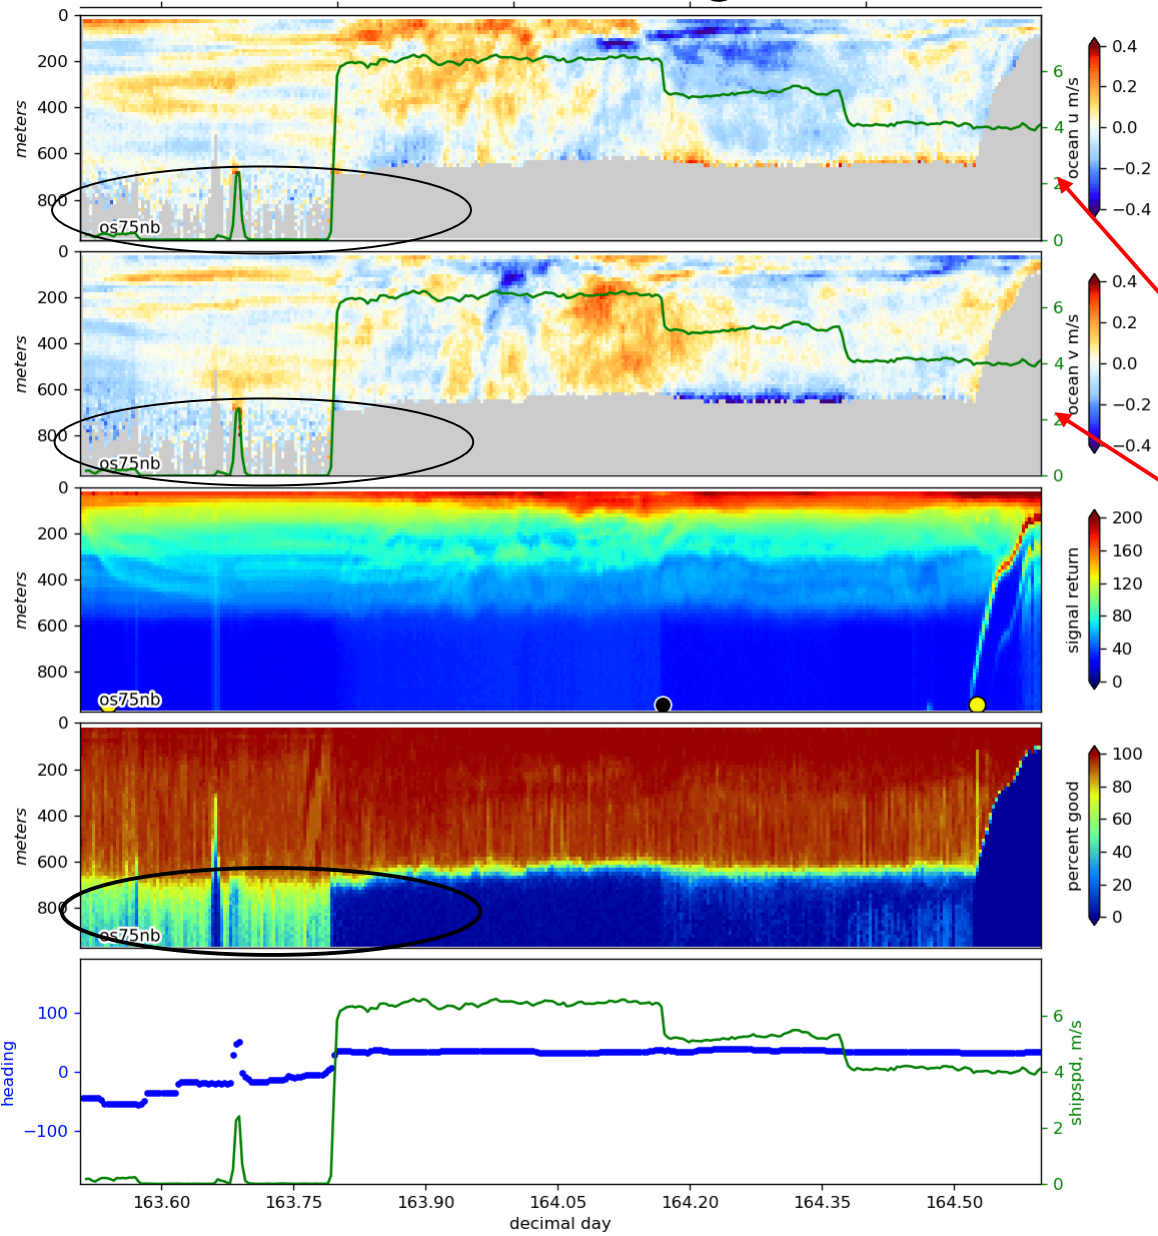

- . Usually Operating System upgrades are done in person, must do it without travel.
 - . Complete operating system upgrade of 24 UNOLS computers on (13 ships)
 - fedex computers to Hawaii, upgrade, ship back
 - remote install using ship's tech support
 - remote upgrade using “do-release-upgrade”
 - . total number of remote login “service calls” requiring a change: 165

- . New in 2022:
 - UHDAS Best Practices page in documentation
 - daily netCDF files (to reduce data transmission requirements)
 - temperature diagnostics plot (rolling out)
 - gga time diagnostics plot (rolling out)
 - POSMV thrashing times (identify)

2022: Instrument Quality (ADCsPs)

- . temperature fluctuations may indicate failure
 - . L.M.Gould os38, Atlantis os75
- . electrical noise (also indicated by temperature)
 - . Ron Brown (os75 - fixed in drydock by moving chassis)
 - . Thompson (os75 - will be fixed during inport)
 - . L.M.Gould (os38 - moved chassis)
 - . Sikuliaq os38
- . strange biases
 - . Sikuliaq wh300
- . failures

Electrical noise in averaged ADCP data

on-station "velocities" below the instrument's normal range

Percent Good is marginal (but not zero) below normal range

underway at slower speeds: strong bias at the bottom of the velocities

2022 Instrument Quality (not ADCPs)

POSMV

- thrashing (log and send POSPAC data to Applanix, beta firmware, and now it's back)

Seapath

- Position: quality indicator= 6: "free inertial" (dead reckoning)
- heading: reduced quality

ABXTWO

- end of life - replacement is untested, (BX982=closest relative, not great)

Timeservers

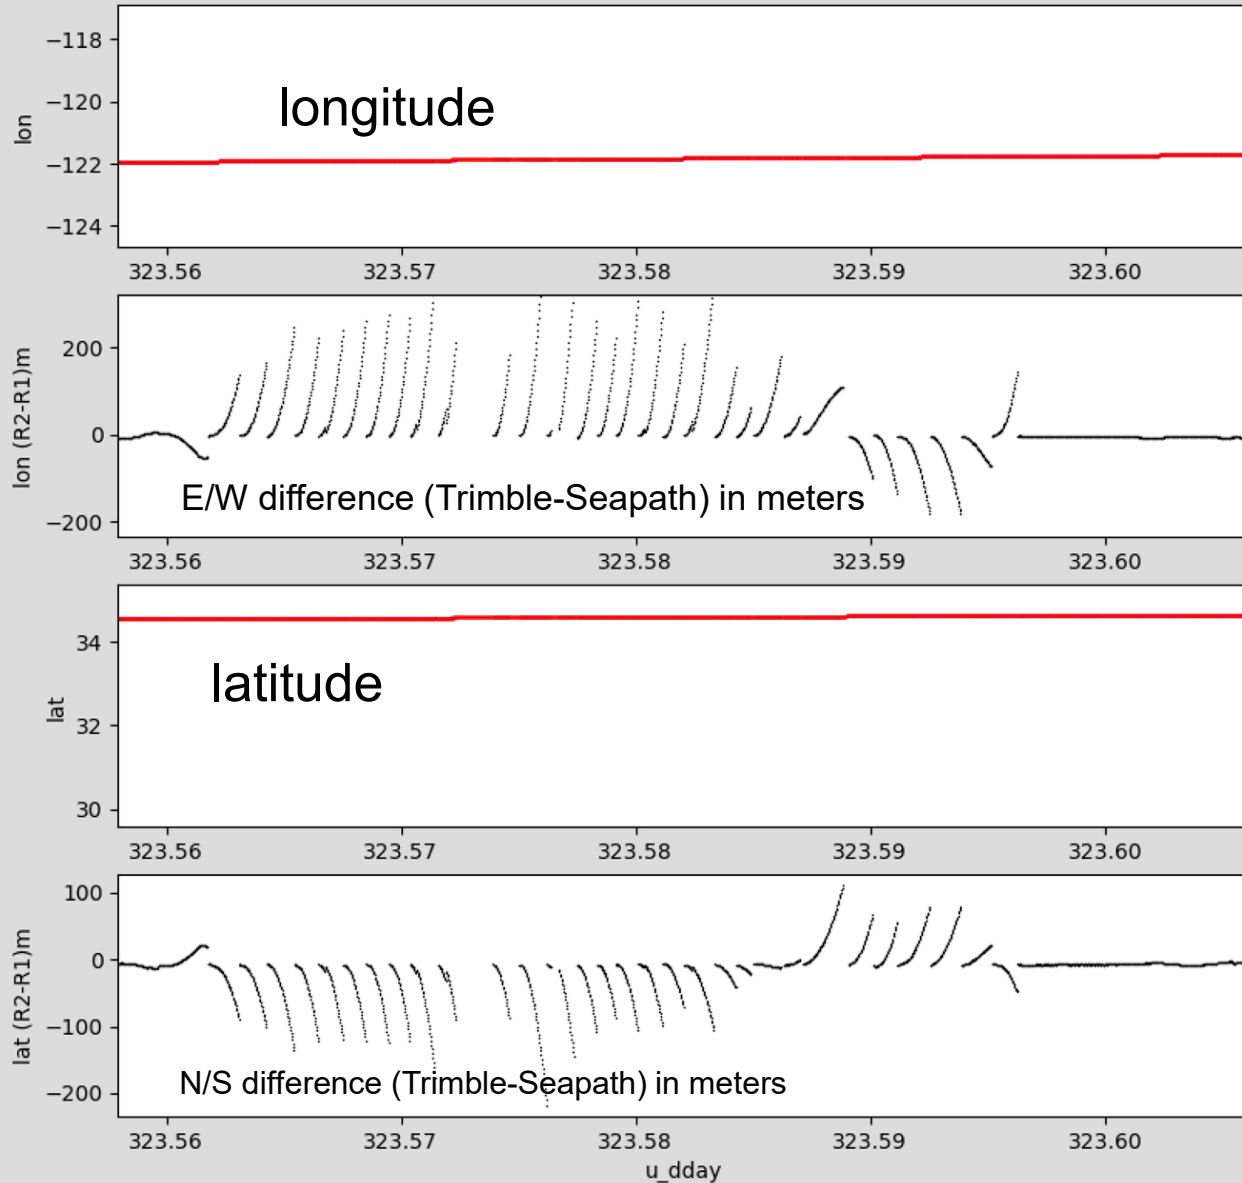

- VM - how to treat time?
- ABXTWO - technically 'can serve ntp', but not very good

Network issues

- UDP storms (network loop) 3+ ships
- multiple UDP streams to the same port (3+ ships)
- network-based serial conversion (eg. moxa) and network glitches (3+)

up to 200m difference in position

- seapath:gps
- trimble:gps
- Diff.

Seapath position

- quality = 6: “free inertial” (dead reckoning)
- dubious quality
- must disregard for ADCP processing

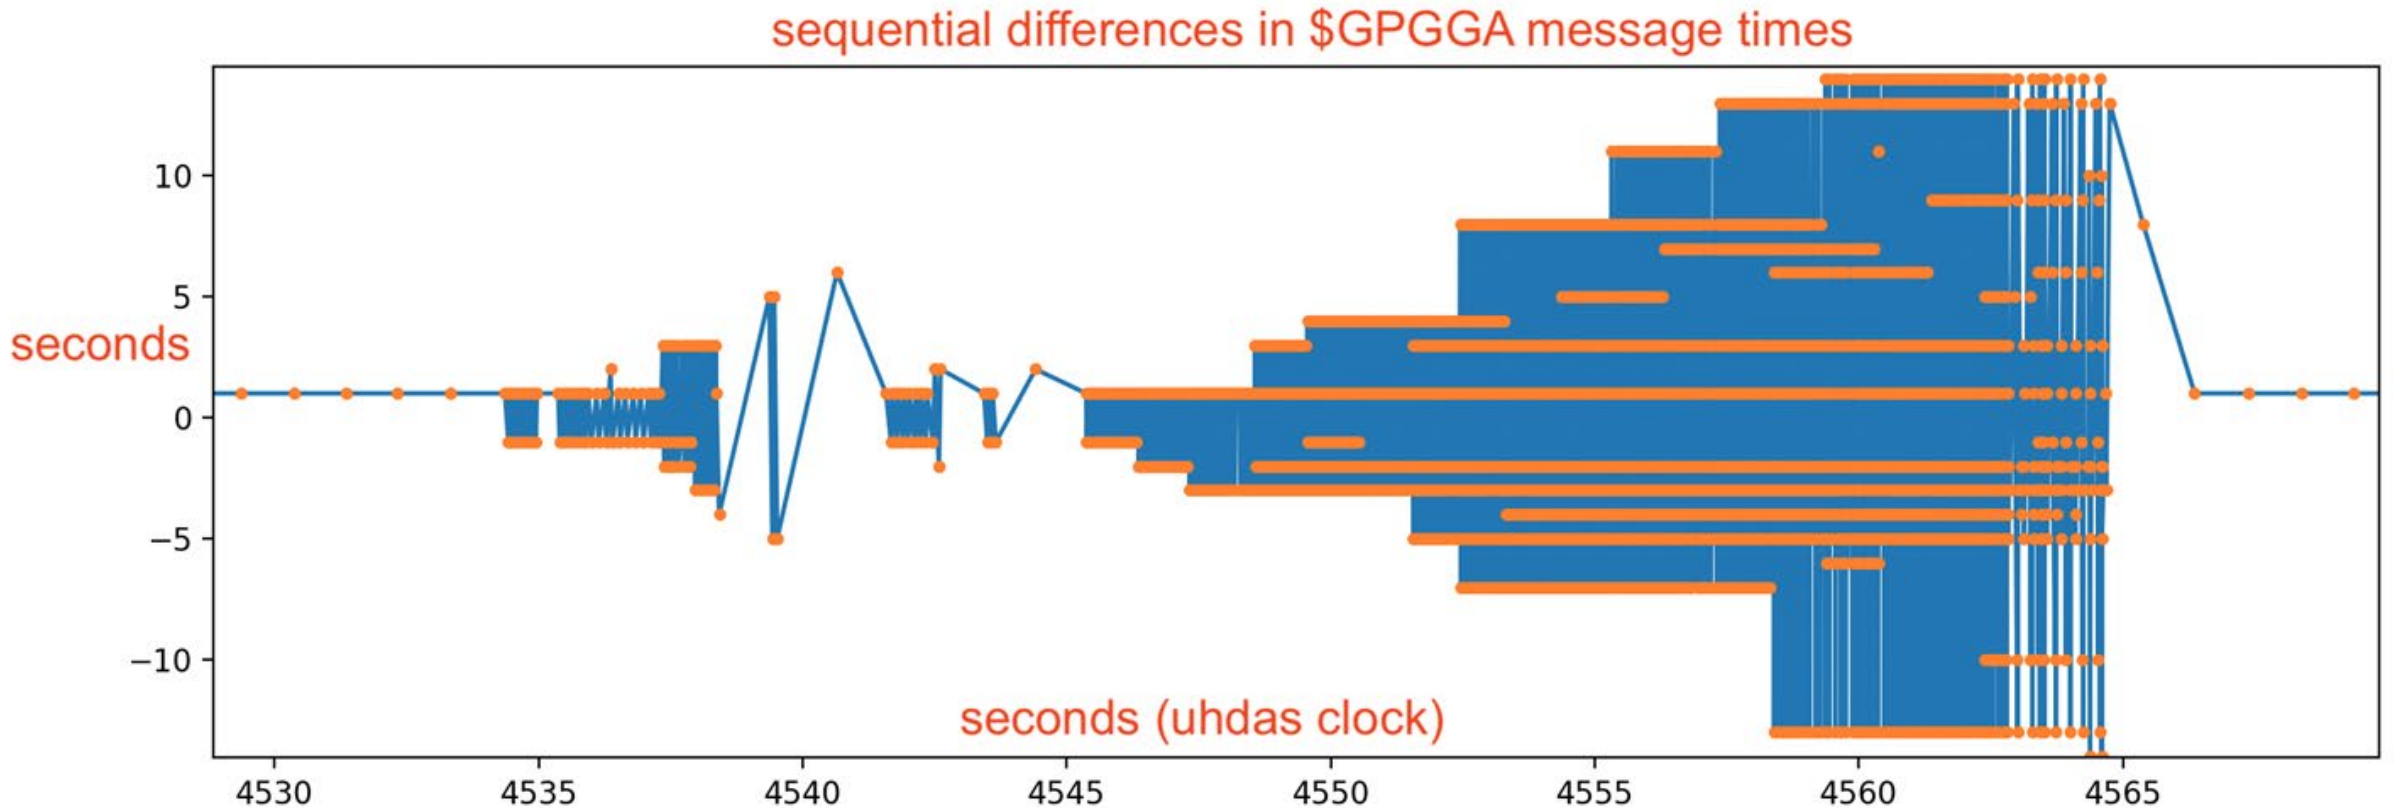

difference between UHDAS PC clock and GGA message time

steps of 0.1-0.6 seconds every

UDP Problems: UDP Storm”

- network loop causes UDP messages to bounce around
- in a few seconds those few GGA messages are send in shuffled order
- easily 5000 (shuffled, duplicate) messages can arrive in that few seconds

Coming up in 2022/2023

- testing Kongsberg EC150 (Sally Ride, “Falkor (too)”) - requires coordination
- test RDI Pinnacle45 (Armstrong, early Jan 2023)
- switch to the next Operating System (22.04), test
 - start upgrading computers
- Hire 1-2 more people
- Continue documentation improvements, software development, helping
