

# **OceanScope: Satellites of the Sea**

**Peter B. Ortner**

**Cooperative Institute for Marine & Atmospheric Studies**

**Rosenstiel School/University of Miami**

**What is truly unique about the OceanScope concept is its proposal to directly measure ocean currents, to create synergies by integrating circulation measurements with simultaneous present and next-generation chemical and biological measurements and to freely distribute these data to the international research and operational ocean communities.**

# “OceanScope” Vessel Capabilities

Near Surface Properties/Met Data – **AMOS**  
ADCP(s) – supplementary GPS/B\_T  
Automated XBT launchers

.....

pCO<sub>2</sub> systems

M-AERI

Full VPN connection to shoreside?

# AMOS Installation

- Located in bow thruster space

## PARAMETERS

- Sea Surface Temperature
- Sea Surface Salinity
- Tuner Designs C6
  - DOM
  - Chlorophyll *a*
  - Turbidity
  - Phycoerythrin
  - Crude Oil
  - Optical brighteners
- pCO<sub>2</sub> (separate module)

# AMOS Technology

- Uses “off-the-shelf” components
- Uses National Instruments cRIO Real Time Controller (as opposed to running from a computer system)
- Program is burned into memory
- Critical functions are executed in an FPGA, improving reliability
- Written in LabVIEW Graphical Programming Language
- Bio-fouling controlled through fresh water flushing and mechanical wipers
- Turns on and off automatically when entering and departing ports (exclusion zones)

# The AMOS “advantge”

- **Leak detection:** automatic shutdown with audible and visual alarms
- **Pressure monitoring:** programmable over pressure level signals automatic shutdown
- **Bypass valve:** programmatically regulates system pressure and flow
- **Air bound system:** provides pump protection depending on sea state, conditions
- **Exclusion zones:** system turns on and off automatically based on predetermined lat/lon coordinates
- **Network Camera:** real time observation of system and valve states
- **Extensive monitoring:**
  - 1) Allows diagnosis of problems with system state
  - 2) Permits instruction of shipboard personnel to perform maintenance

# Our Current “Fleet”

CMV/Oleander (BCL)

M/S Norröna (Smyril Line)

CMV/Nuka Arctica (Royal Arctic Line)

Allure of the Seas (RCCL)

Equinox (Celebrity)

**Harmony of the Seas ( RCCL 3/2015)**

Limpets on Hull Surface

# Representative Vessels

# Bubble Sweepdown Issue

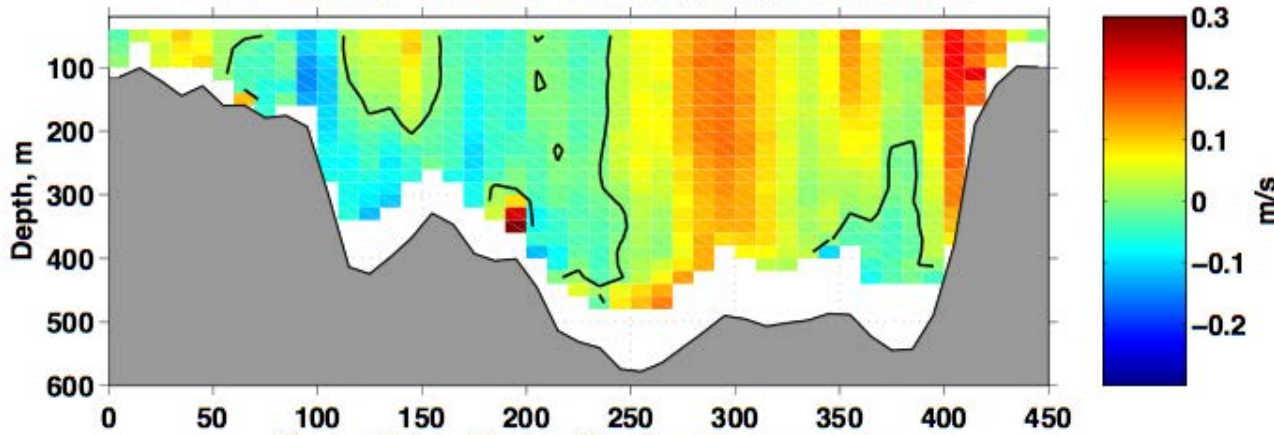

# Modular ADCP Installation

# Repeated ADCP lines can be used to Estimate Transport

Mean Detided Across-Section (~NE) Component

Iceland-Faroe  
mean north flow  
= 4.5 Sv

Faroe-Shetland  
mean north flow  
= 4.1 Sv

Mean Detided Across-Section (~NE) Component

Directly estimated inflow into the Nordic Seas  
between Iceland and Scotland = 8.5 Sv.

# To Quantify GS Variability

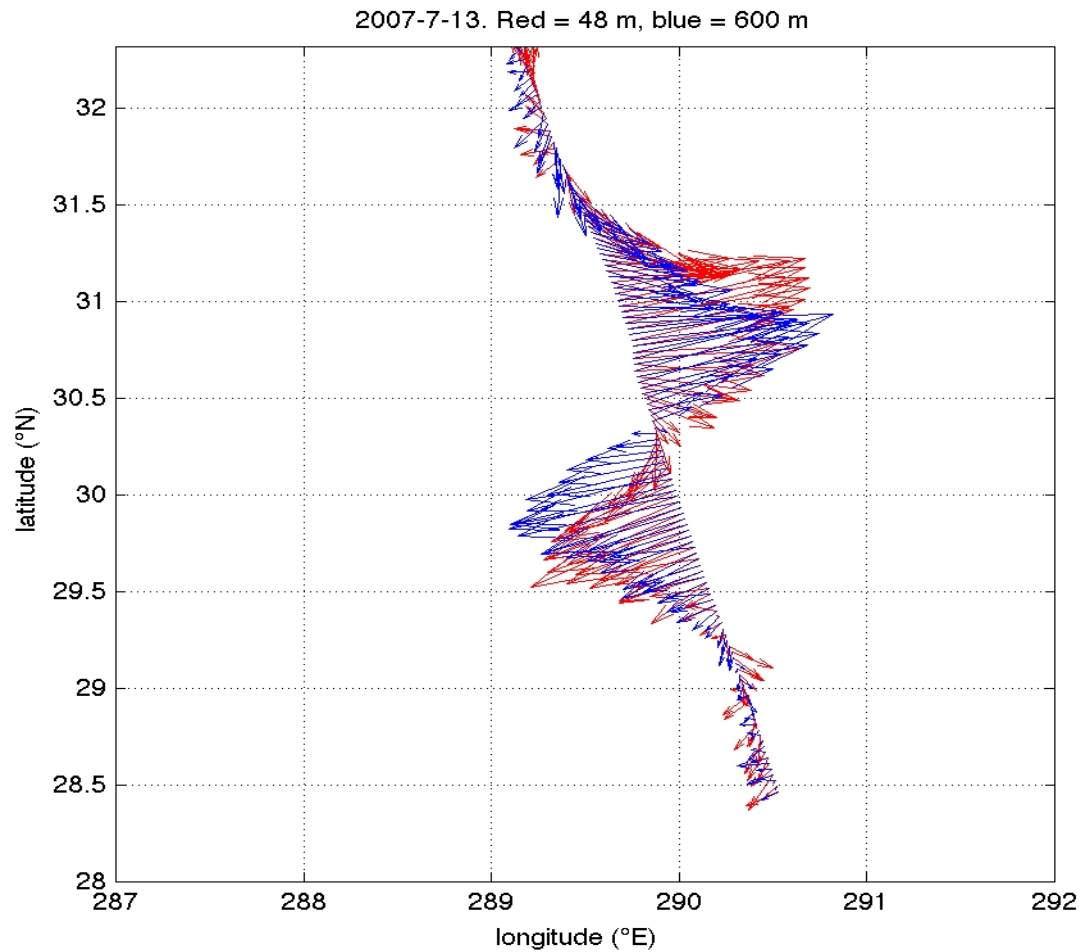

**Figure 1.** Mean velocity and variance ellipses between the mid-Atlantic Bight shelf break and Bermuda at 52/55 m depth for the 1993–2012 period. The bar corresponds to  $1 \text{ m s}^{-1}$  and  $0.5 \text{ m}^2 \text{ s}^{-2}$ , respectively. The depth contours range from 1000 to 5000 m.

# To Measure Mesoscale Eddy Velocity

# Good enough velocities to estimate density

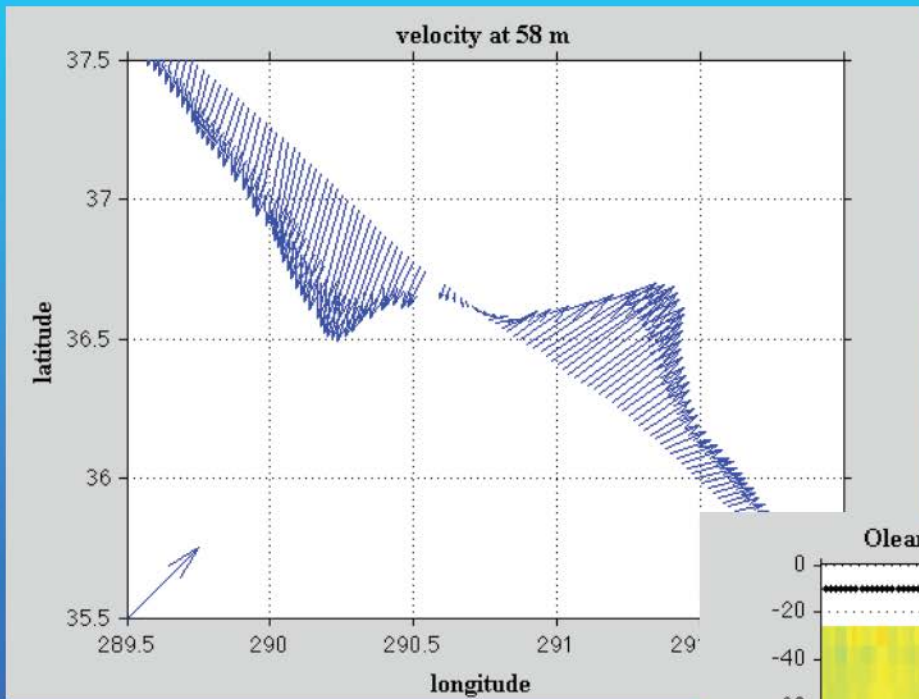

# Good Enough for Potential Vorticity

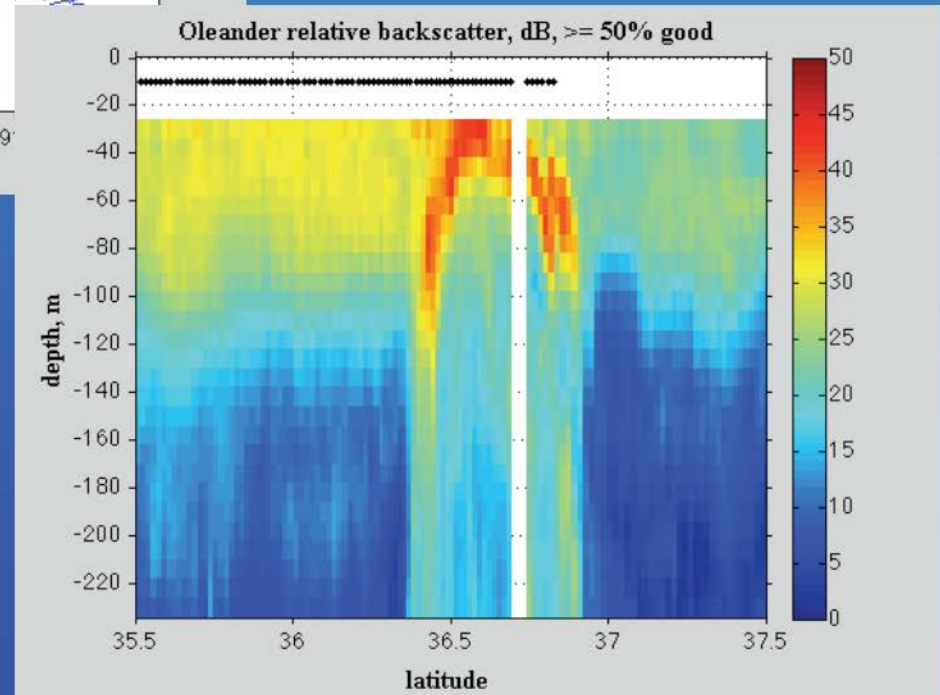

**But I am a Biological  
Oceanographer:**

**An ADCP yields not just Doppler  
Shift  
but also Signal Strength !!**

# CCR Zooplankton at the GS Front

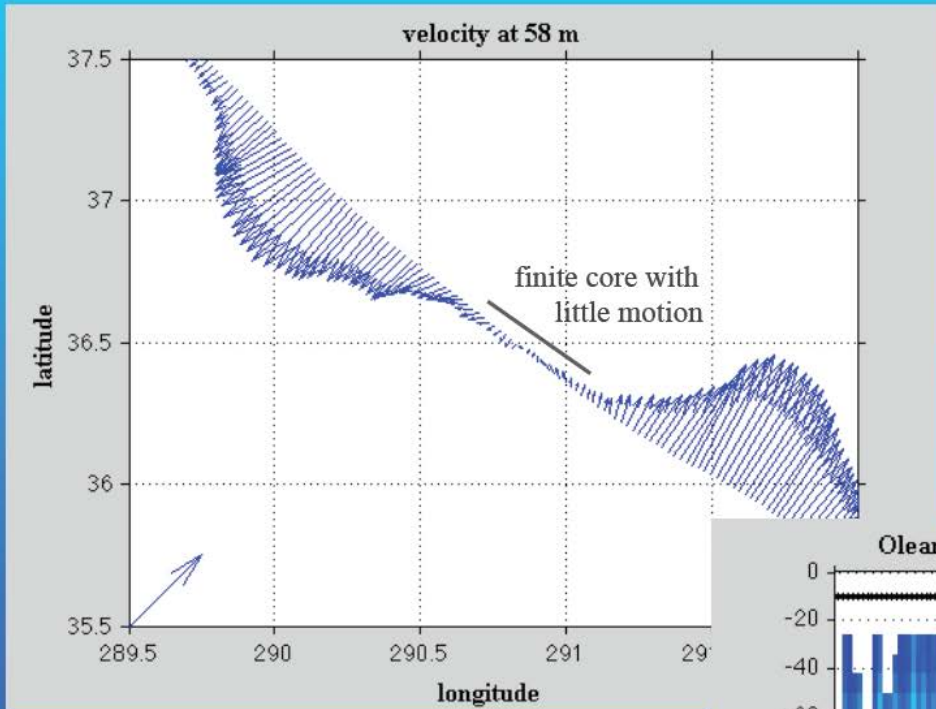

Slice through GS trough shows sharp biomass boundary between Slope and Sargasso waters.

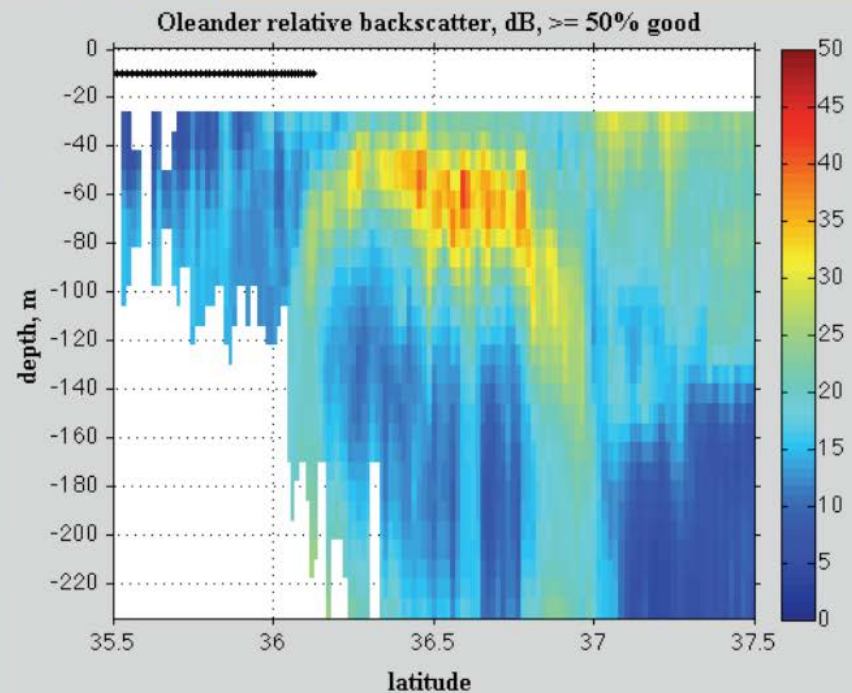

# CCR just 1 week later

1 week later nascent CCR shows remnants of GS structure: ring current and quiet center

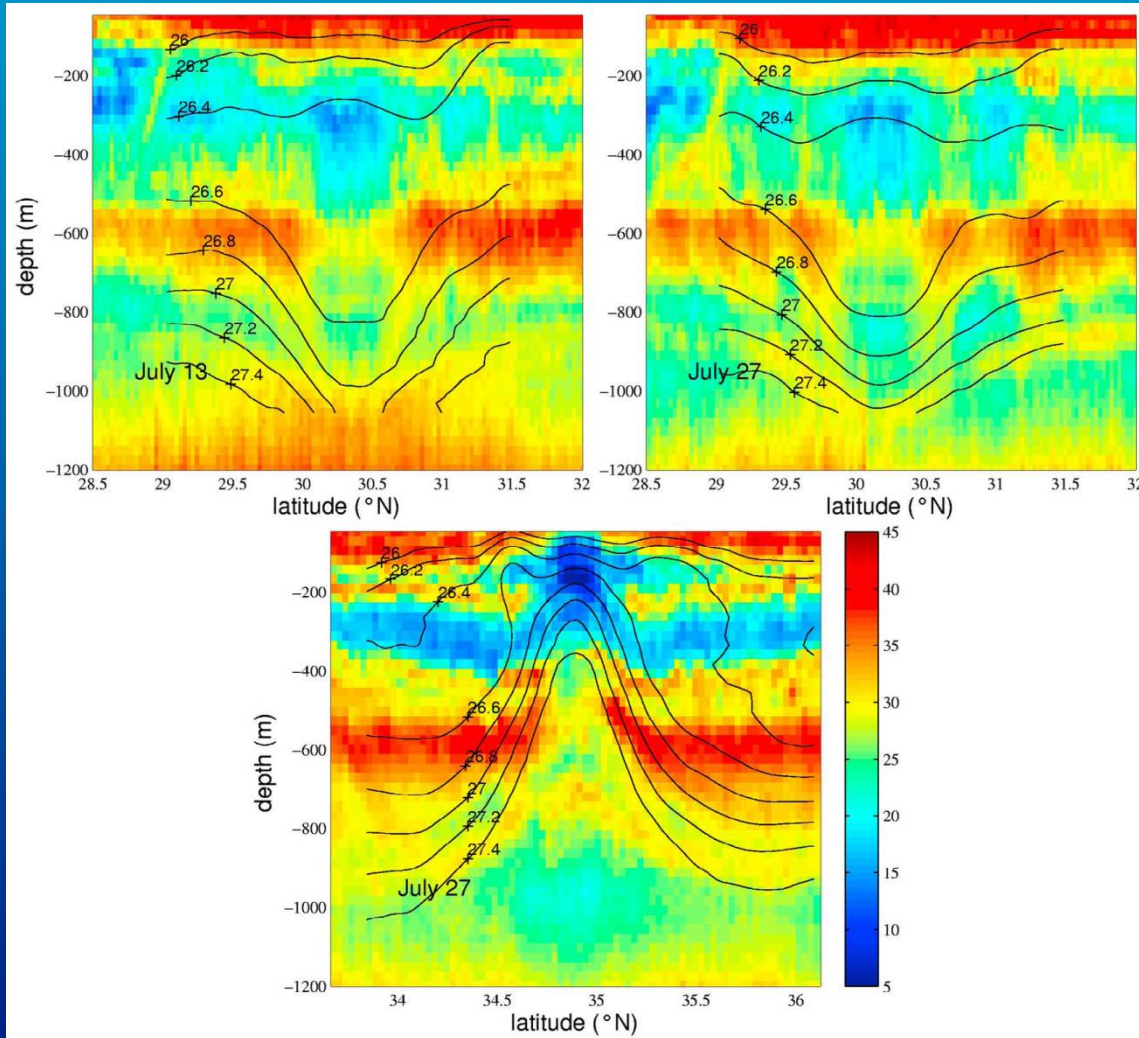

**More than just the plankton...**

# Mesopelagic Fish

# Mesopelagic Biomass SS (38KHz)

**Anti-Cyclonic  
Eddy**

**Cyclonic  
Eddy**

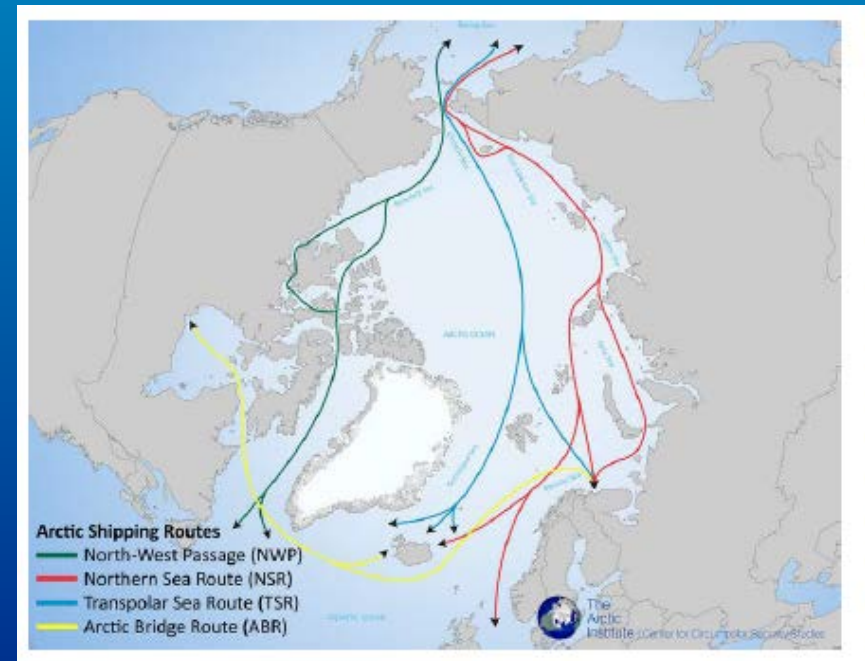

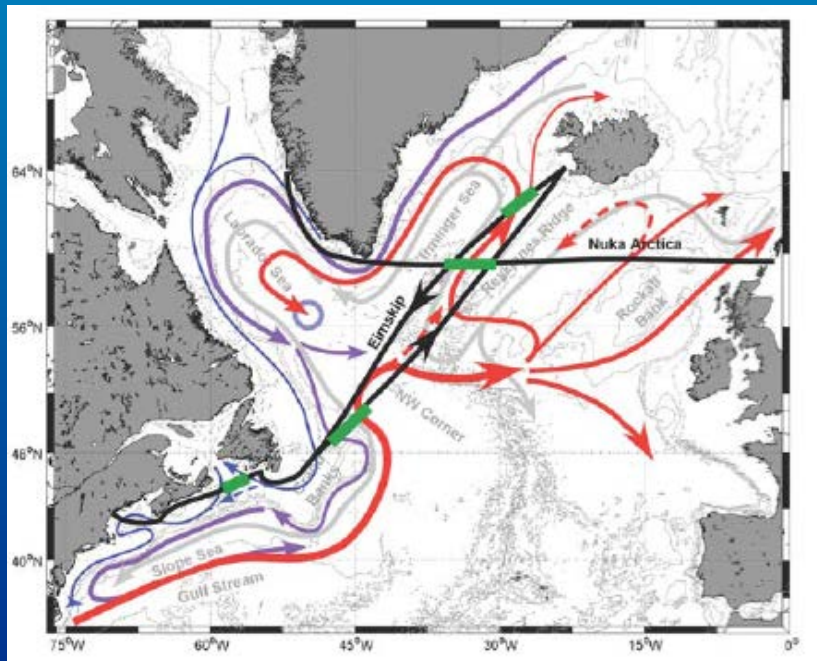

**A Highly Counter-Intuitive Result !**

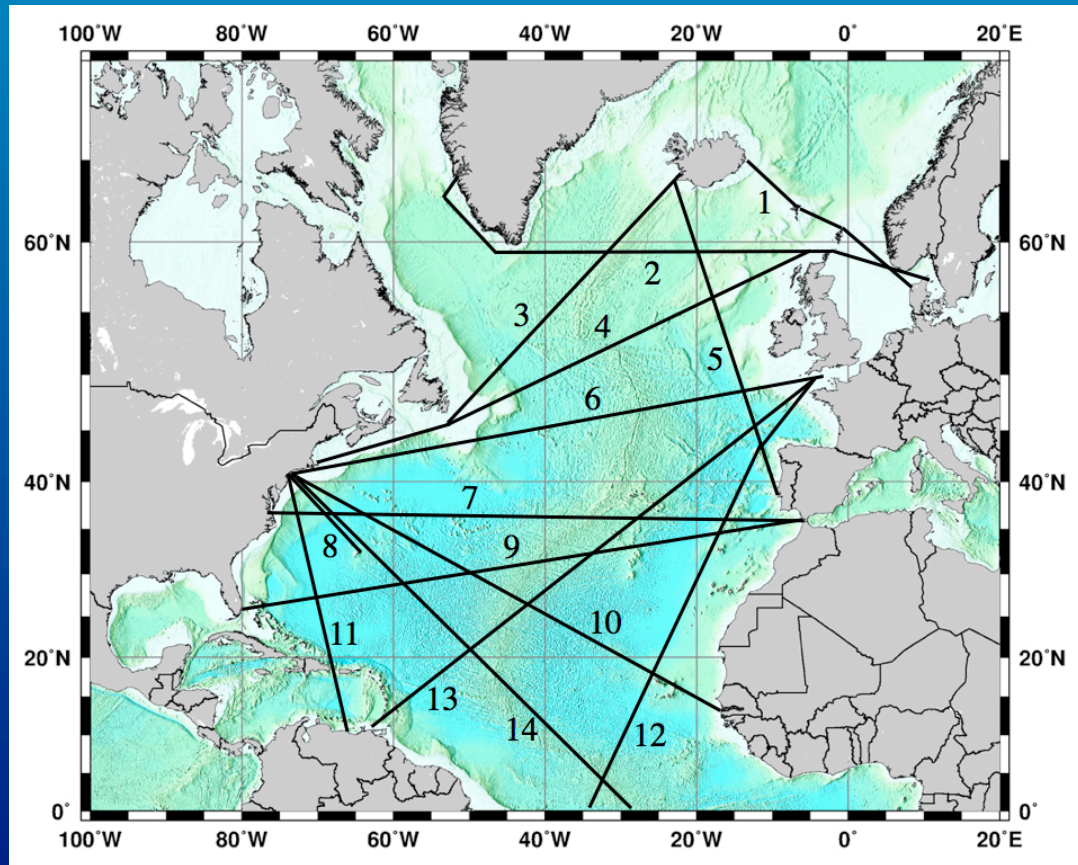

# Emerging Opportunities to Expand Our Fleet

Elm-Skip / NSF

Arctic Ocean / S.Korea

# Beginning to Populate OceanScope Phase One

# Promising Technology Developments

- **AutoXBT Launcher Options**
- **Improved Expendable Probes - Climate Quality Physics (CT) and BioChemical Parameters (pH, O<sub>2</sub>, Chlorophyll)**
- **UHDAS for OceanScope**
- **Dual Frequency/Adjustable Beam Angle Phased Array ADCPs**

# Conclusions

Realizing OceanScope could open up entirely new fields (of oceanic properties) for detailed and quantitative description.

OceanScope can provide unique information complementing research fleet and GOOS

**Progress Slow and Timing Terrible**

**BUT**

**We are Moving Forward !!**
