

Rough Cut at proposal success as it relates to ship time requests.

Based on all of the “Active” ship time requests in my status spreadsheets. This will not include in requests submitted prior to 2006 that had been declined, but it does include (in the funded category) earlier requests. This skews the results in favor of funded requests. I don’t have an easy or accurate way to get all the requests and their eventual funding status using our current system because so many people re-use their ship time request form when resubmitting and because we have not tracked this success rate purposefully. These are for NSF only, except that OPP has been excluded.

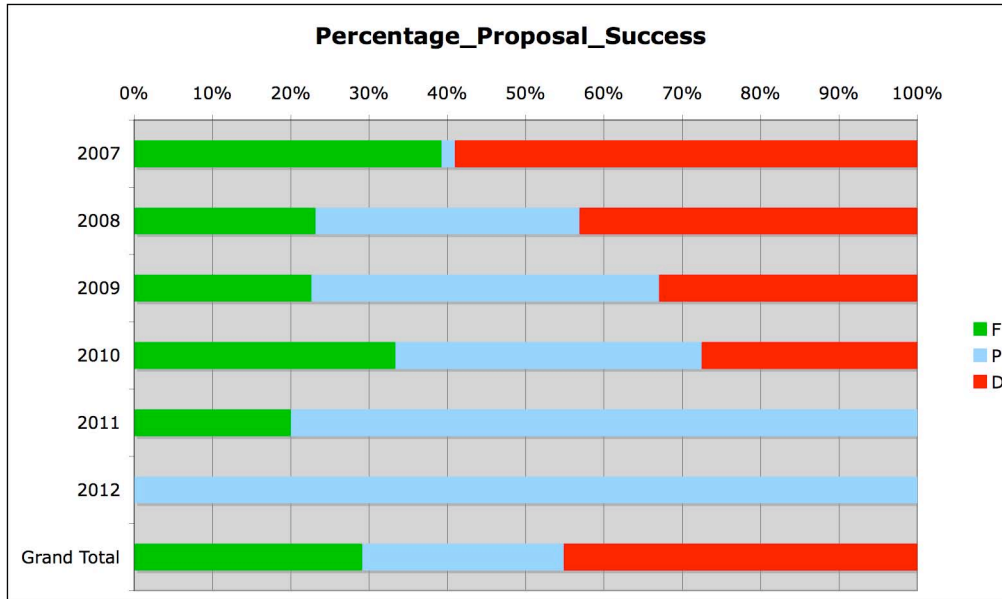

In terms of days requested:

The next set of numbers and graphs looks at just the STRs that were modified or submitted starting in the month and a half before the Feb. 2006 deadline. This approximates the success for the last two major panels. Again, not much difference in the percentages when looking at number of ship requests submitted or modified during the last year.

This page shows just the requests for which funding decisions have been made (no pending) and that have been submitted or modified in the last year. This method still will still be skewed slightly in favor of “funded” requests for the last two panels, but does eliminate a lot of the requests that were funded prior to the May 2007 panel. I would use this set of data as a rough idea of the percentage of ship requests that get funded.

As a function of the number of requests (not proposals).
