

Feedback Response - Jason

DESSC
June 2008

- **Not clear to PI that supplying digital bathy was preferred**
 - Multibeam data important for DVL overlays
- **LBL navigation not used, Doppler performed poorly on steep slopes**
 - 300 kHz Doppler still does not work properly on steep terrain
- **First use of new control vans - seemed to work well, although screen layout changed from watch to watch. Could it be standardized?**
 - First cruise - sort out with experience
- **Dive durations were “over-zealously inflexible”**
 - Need a steady cycle for ops team; first time we tried 8-hour turnaround time
