New A-frame Concept design from Allied

UNIVERSITY OF ALASKA FAIRBANKS

America's Arctic University

Allied's concept for the replacement A-frame.

The flood lights and upper tugger winch are mounting on the gimbaled portion of the cross-member.

The port side wing will be lowered so it does not need to be removed to clear the port crane pedestal with the frame is in the maintenance position.

Capacity of the A-frame will be 120,000 kips when static and 30,000 kips luffing.

Vertical clearance from the bottom of the gimbaled mounting plate to the deck is 30 feet.

A wide-angle photograph of a sunset over the ocean. The sky is filled with large, dark, dramatic clouds that are illuminated from below by the setting sun, creating a gradient of colors from deep blue at the top to bright orange and yellow near the horizon. The ocean surface is dark and textured with small waves. The text "Thank You" is centered in the upper half of the image in a red, sans-serif font.

Thank You
