

Autonomous Systems Requirements

Areas of Consideration

- *Launch and recovery requirements-appliances for specialized docking heads, deck spaces*
- *Battery storage and safety*
- *Short and long-baseline tracking systems-mounting options*
- *Ship maneuverability-DP criteria*
- *Complementary ship sensor systems*

“This should be carefully sorted into those requirements that properly belong to the users (probably most of them), and those which can be translated into a legitimate Science Mission Requirement for the vessels” -Marc Willis
