

STARC Report to AICC

Seattle Washington

USCG Base Seattle

January 10-11, 2018

Photo by: Britton Anderson

*Presented by: Brett Hembrough – Arctic Cruise Coordinator
Lee Ellett – Manager Shipboard Tech Support – SIO
Andrew Woogen – MarTech Manager - OSU*

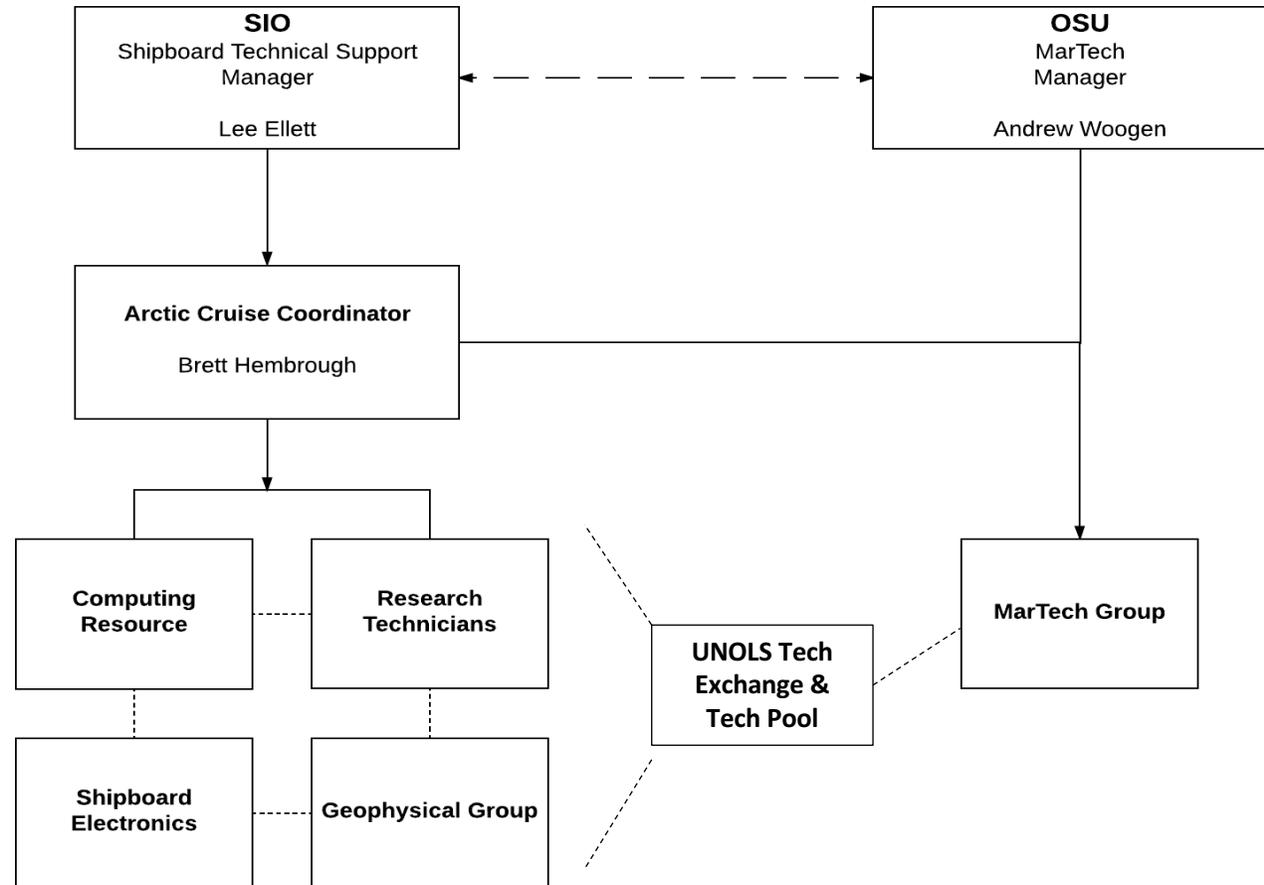

Ship-based Technical Support in the ARCtic

- Collaboration between Scripps Institution of Oceanography – UCSD and Oregon State University
- In cooperation with USCG
- Entering 5th year of 5 year grant (2018)
2014 - 2018

STARC Org Chart

Established staffing consistency throughout field season

- **Only** staffed cruises with experienced techs with recent dockside and underway experience (3 tech model)
- Trained new techs during pre-season and transits
Multibeam (Sweden), Fiber Optic (UDEL / Seattle)
- Building technical resources for the future

Utilization of UNOLS Tech Pool and Tech Exchange

- Able to bring in specialized skill sets
- Matrixed support to complement OSU / SIO techs
More scheduling flexibility
- Diversity and experience from other ships / institutions

Documentation and Diagramming

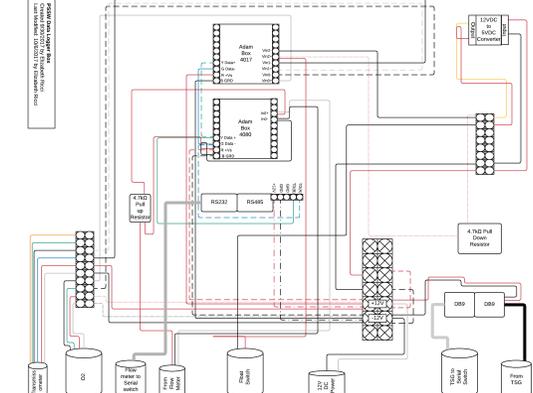

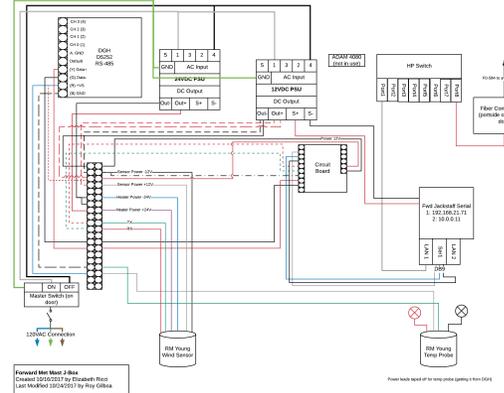

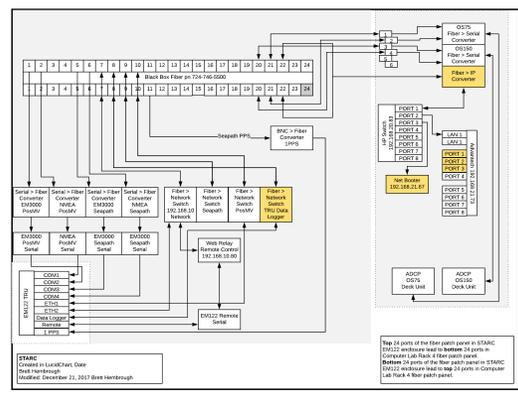

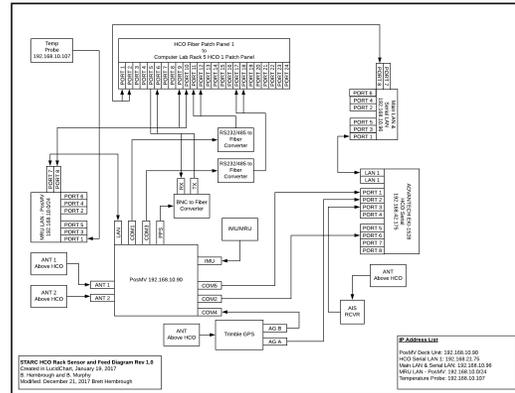

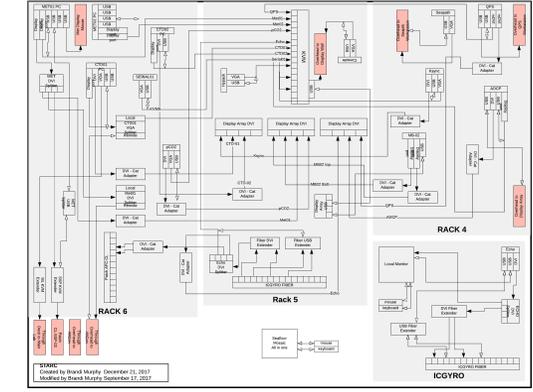

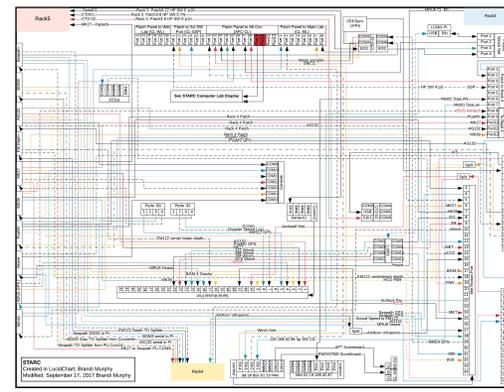

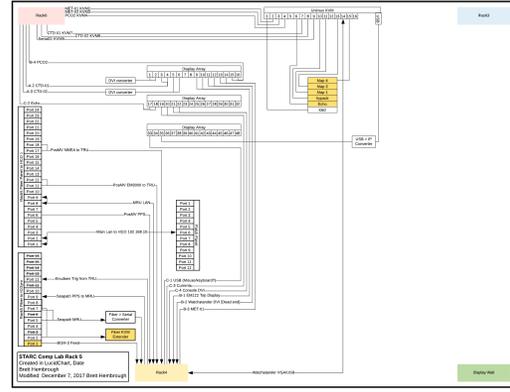

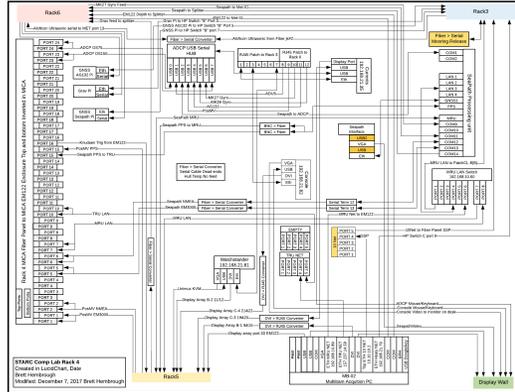

Completed all science spaces and computer racks

- Shortens troubleshooting time
 - Know where to look and what to look for
Less wire tracing 😊
- Cable organization and Clean-up
- Labeled all connections at both ends
 1. Local port - ex: Advantech port 12
 2. “What it is” - ex: Seapath GPS
 3. * Intermediate info ex: Rack 6 to Rack 5 (if necessary)
 4. Final Destination – ex: Multibeam computer

Diagrams (LucidChart)

Standardized Weekly Reporting

Same format across all cruises and techs !
Critical due to multi-institution support structure

- Techs received formal training on reporting style and critical info to include (Power Point presentation)
- Track instruments by serial number
 - Long term performance evaluation
 - Record of sensor swaps
- Checklist format
 - Easily compare to previous reports
 - Nothing left out
- Reminders to include weekly system checks/tests
 - Multibeam BIST
 - Gravimeter Voltages
 - PCO2 Gas Log

- Notes for Evening Planning Meetings, etc

Shows great potential will continue to fine tune use during 2018 season

Daily, Weekly, Monthly

Defined Technician Responsibilities and Recording

Daily:

- Rounds to all STARC system locations
- Visual inspection of sensors (inside and outside)

Weekly:

- Multibeam BIST (Built in Self Test)
Record of performance over long term and varying conditions
- Gravimeter Voltage Readings
Provide to PFPE via Google Drive
- PCO2 Gas Log

Monthly:

- UPS Battery Checks
- Multibeam filter cleaning
- Acquisition Computer disk checks

Startup how-to

Created by Hirsch, Matthew, last modified on Nov 10, 2017

This describes all of the required steps in the computer lab for starting a cruise

- Step-by-step guide
 - Set up data flow:
 - ADCP
 - KSYNC
 - Multibeam
 - Knudsen echosounder
 - MET
 - Serial Server
 - Seawater Flowthrough
 - pCO2
 - CTD
 - Hypack
 - QPS
 - OpenCPN
 - Other bits and pieces:
 - Related articles

Step-by-step guide

- Set up data flow:**
 - Review the [Data Syncing Preface](#) to learn how to change `cruise.config` on `healynas/data/etc`
 - Use the console machine for this, as it has already been configured to connect to `healynas` via username "cygwinuser."
 - Change the start date, end date, and mission name (ALL CAPS)
 - Copy the "template" directory, and paste it in the same directory.
 - Rename the newly pasted directory to the current mission ID in all CAPS. (i.e. HLY1701).
 - Be sure all local directories in the acquisition systems have their names or data directed to a local directory of the same name.
 - As mentioned above, you must now know how to utilize the `crontab` (linux, osx) and task scheduler (windows) of each machine.
 - Be sure that all the `sync` scripts' `crontab`/tasks are uncommented/enabled on every machine except ADCP (not applicable to `ksync`, and possibly `mosaic`).
- ADCP**
 - On the UHDAS' UI enter new cruise name and hit start logging. UHDAS has its own data sync mechanism into `healynas` that we do not have to worry about.
- KSYNC**
 - If you skip this step the Knudsen and EM122 won't ping because they're waiting for an external trigger
 - Go to the KVM and navigate to the KSYNC computer
 - Make sure that the desired Echo Sounders are enabled (Chirp 3260, EM122, QS460, QS76)
 - Click the System Control button and it should start running
- Multibeam**
 - Click View - Tear off - New Survey
 - Enter cruise name, and any other description (PI, tech names, etc.)
 - Use the defaults for the rest
 - make sure that # of cells is set to 256x256 and cell size is 7m
 - Click 'Start New Survey'
 - Start pinging, then when the swath looks good, start logging
 - Outside of SIS, open the Task Scheduler
 - Enable the task scheduler (`sync` to `healyNAS`), and click Run
 - Run start-of-cruise BIST once in 500+ meters of water

Standard Operating Procedures, Instrumentation

Created by Meyer, Jon, last modified on Nov 09, 2017

This page and its children are to document Standard Operating Procedures (SOPs) specific to Instrumentation. Note that other spaces may have their own SOPs, too, so titles must be unique to the space, e.g. *IN-SOP-123*.

- IN-SOP-001 Creating Standard Operating Procedures
- IN-SOP-002 Cleaning EM122 TRU and Preamp Filters
- IN-SOP-003 Flushing the HiPAP gate valve
- IN-SOP-004 Taking BGM-3 Test Points
- IN-SOP-005 Conducting a gravity tie using the UNOLS laptop
- IN-SOP-006 Collecting a sound speed profile with xbt launcher and turo xbt software
- IN-SOP-007 Verifying ASCII RS-232 Serial Feed Output Data
- IN-SOP-008 Copying mission data to our departmental archive

HLY1703 Running Event Log

Created by Hirsch, Matthew, last modified by Coons, Mike on Oct 11, 2017

Daily log:

- Tues Sept 19
 - 1200 Restarted Seapath and all conditions were at green "safe"
 - 1300 departed from Dutch Harbor, AK
 - ~1400 Seapath Integrity moved from green to yellow "caution" on and off for approx an hour, then stayed at green
 - 1500 Tim Newberger said he never got the data from the last day of HLY1702. Sent it out to him.
 - 1900 XBT
 - Tracked and repaired the issue with the OS150 ADCP. Despite cleaning the fiber connections and still seeing no connectivity, we tracked the problem to a faulty fiber--serial converter at the ADCP deckbox. After replacing that with a working one communications are back, and it looks like the checksum issue is resolved. Will continue to monitor.
- Wed Sept 20
 - 0300 Multibeam lost 1PPS. Simply stopped pinging and restarted and that seemed to fix the problem.
 - 0500 Removed PAR sensor from CTD and dummy plugged. All CTD's are going to be over 3000m this cruise and PAR sensor is rated only to 2000m.
 - 1000 Attempted to run the OS150 ADCP from the spare computer to see if it made a difference with the reoccurring checksum issue. It did not. All connections moved back to original computer and ADCP continues to run (and collect checksum errors) same as before the attempt.
 - Troubleshooting of ADCP throughout the day proved to be less than fruitful. JIRA ticket HLY-84 regarding this issue was updated with more detailed info as was the e-log.
 - 2200 Multibeam lost 1PPS, as Mike noted, stopping and restarting pinging "fixed" the problem
- Thurs Sept 21
 - 0130 Noticed the multibeam was only seeing good returns on the port side beam, stopping and starting the pinging process seemed to bring it back to getting good returns from both sides. We are transiting north at ~15 kts in 27m of water, so the data is sub-optimal anyway

- **Ticket Tracking software w/ email notification**
 - Used in many industries, customizable to STARC needs
 - Tells a story and tracks project progress
 - Set deadlines, reminders, assign tasks, importance
- **Shareable across institutions**
 - Email access even at high latitudes
 - Subject line title will link with ticket number (HLY-149)
 - Notifications for ticket creation, changes, closing
 - Supervisors able to follow along and provide real time guidance and feedback.
- **Searchable database**
 - Links to similar and/or related tickets
 - Generate Reports (completed vs in-progress)
 - Performance Metrics

Ticket Tracking

Description

The ABX-Two from Trimble has been identified as a possible replacement for the AshTech ADU5 (no longer supported). It is possible that a loaner unit may be available from Trimble that we could evaluate on Shakedown/transits. In order to move forward, we need to review the installation requirements and check out the proposed install location (on top of HCO). It may be possible to use some of the pre-existing AshTech antenna mounts. If this seems feasible a 'prototype' TCTO procedure will be initiated to coordinate install and get approvals from the USCG.

ean Innovations for the head unit and a couple of 0 antennas (currently in use with PosMV) in order

Pre-Season Projects

- Annual Calibrations and standard maintenance
- Uninterrupted Power Supply Updates
 - RMA, New Batteries for all, 2x new units (AftCon, Comp Lab)
 - Inventory and maintenance spreadsheet developed
- Completed Diagramming
 - Wire tracing and Fiber Optic testing
- Fiber Optic Cleaning and Repair
 - Inspection Scope and cleaning supplies
 - Field Termination kit
- New Servers in Computer Lab x10
 - Updated OS and software
 - Lifespan replacements
 - Better processing power
 - New capabilities – QPS (Qinsy, Qimera, Fledermaus)
- K-Sync re-established

Pre-Season Projects

- **CTD Rosette and Bottles prepped**
Complete Niskin bottle sets (24 primary, 24 back-up, ~6 spares)
Cap, vent, spigot, and spring replacements as necessary
New O-rings throughout
- **MET**
Improved weatherproofing of Wind Sensors (only 1 failure all season)
Installed new Relative Humidity sensor for evaluation (less susceptible to freezing)
New wire run on forward Jack Staff, more robust install on gooseneck
- **Dedicated 1PPS feed added - Ceesync**
- **Gravimeter Platform and spares sent for evaluation**
- **PCO2 site visit and new gas cylinders installed**
- **Winch Re-Spooling (9/16th, .680, .322 wires)**
STARC involved as liaison
New wire logs started, coordination between STARC and HEALY Deck dept.

Pre-Season Projects

- **Preparation for MAC visit**
 - Documentation gathering and survey verification, coordination w/ Kongsberg
 - PosMV antenna mount re-measured and verified
 - New IMU (v5) offsets updated (phase center based on height of sensor)
 - Seapath MRU sent for calibration
- **Preparation for JMS Inspection**
 - Winch/wire terminations, slip ring service and re-install
 - Coordination with Coast Guard MSTs
 - Welcome Aboard binder and Lab Layout drawings
 - Fume Hood certifications
 - Equipment Preparations
 - Improved installation for XBT launcher

Forward Science Vans

- Electrical completed w/ enclosure boxes
- Potable and Seawater connections completed
- Next phase = communications, alarms, network, etc

12kHz Transducer replacement

- Lifespan replacement for Knudsen echosounder
- Equipment purchased, delivered, awaiting install opportunity
- Transducer void access gained in Dec 2017 to assist in work planning
- Healy has plans to replace ice windows and gaskets in dry dock 2019
STARC planning to install new transducer at this time.

Icefloe.net content updates

- Small boat / dry suit requirements
- Ice –Ops policy
- Contact info, etc

Cruise Planning Telecon Agenda refined per AICC comments

- In addition to Cruise Planning form (mirrors topics)
- Allows for more detailed discussion and note taking
- Modeled after successful Cruise Planning template used at SIO
- Coordination with Coast Guard MSTs

Shakedown May 16-23

Underway with:

Multibeam Advisory Committee ~3 days

Paul Johnson and Vicki Ferrini
Kongsberg Technician – Tony Dalheim

UHDAS

Jules Hummon – new computer install, updated OS

- Ongoing noise troubleshooting – deck unit relocation

JMS Inspection ~ 2.5 days

Ted Colburn
Science spaces, equipment, and over-boarding gear

SIO 5x techs, OSU 2x techs

Training for 2017 field season and beyond
24hr watch standing during MAC operations

USCGC HEALY (WAGB 20) Shakedown 2017 Schedule

Multibeam Advisory Committee

EM122 Calibration and Verification Tests

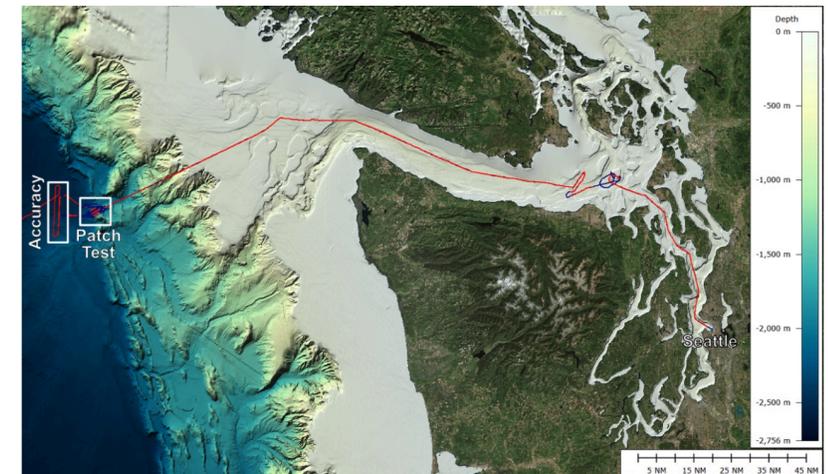

- Verify sensor installation and system geometry
- Patch Test (SeaPath and PosMV)
- Pitch and Latency Lines
- Roll Lines

Noise Testing

- Self Noise vs. RPM
- Machinery Diagnostics

Swath Width

- Extinction Plot – (shallow > deep and deep > shallow)
- On approach to Hawaii – pending analysis

Multibeam Advisory Committee

Full report now available

- No major issues with sensors or latency
 - BISTs indicate system is within spec, however, some elements are at the edge of acceptable tolerances (one notable outlier observed)- requires ongoing monitoring
- Swath width is roughly 5x water depth @ ~750m, reduces to 4x @ ~2600m

Healy suffers from elevated noise levels

- Impacting swath width and standard deviation of soundings.

Continue Power Plant configuration analysis
More advanced testing needed- Gates Acoustics?

USCGC Healy EM122
Multibeam Echosounder System Review
May 16-20, 2017

Report prepared by:
Paul D. Johnson¹, Vicki L. Ferrini^{1,2}, and Kevin W. Jerram¹

¹ University of New Hampshire – Center for Coastal and Ocean Mapping / Joint Hydrographic Center
² Columbia University – Lamont-Doherty Earth Observatory

This work was supported by the National Science Foundation under grant no. 1524585.

Multibeam Advisory Committee

Noise Levels

- Last assessed in 2014 – Gates Acoustics
 - Known sources/configurations were tested again
 - Boiler feed pumps, potable water pumps, main sea water pumps, aux generator pumps, fire pumps
 - Bridge echosounder (fathometer)
 - Speed logger
 - Swath width > 60 degrees shows a reduction of 5-10 degrees compared to typical EM122 coverage at same depth
 - Possibly noise related

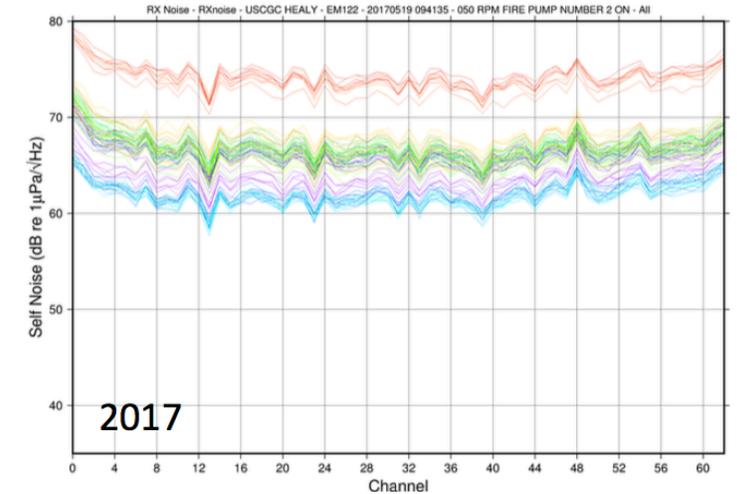

Figure 13. Noise levels perceived by the EM122 receiver under different machinery configurations. Individual test results are presented in Appendix 4.

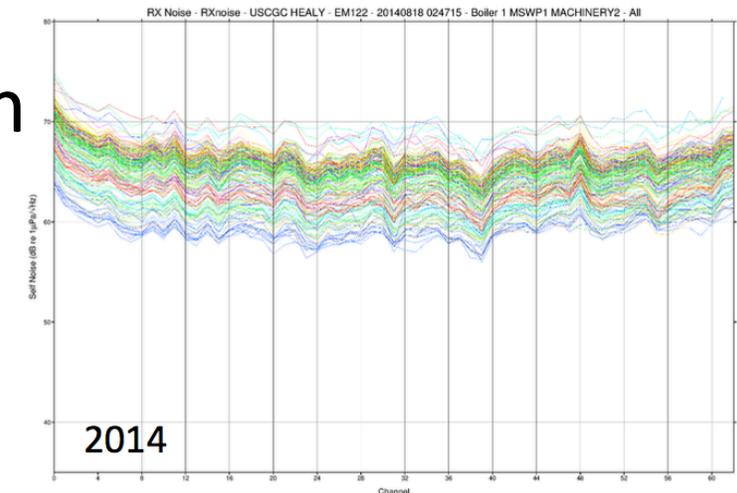

Figure 14. Noise levels perceived by the EM122 receiver under different machinery configurations. This data was collected in 2014 by Gates Acoustic. Individual test results are presented in Appendix 4.

Preliminary and Full Report Available
Overall Healy scored “**Very Good**” or “**Good**” in all inspected areas.

Over-boarding Equipment

Winches

- RVSS Appendix A – Factor of Safety 5.0
 - Develop Extenuation Circumstance Plan vs. GAR
 - Level-wind Rollers (.322)
 - Tension monitoring tolerances

Cranes

- Tested under load
 - Operated safely (alarms and indicators functioned properly)

VESSEL INSPECTION REPORT
USCGC HEALY (WAGB 20)

20 – 22 May 2017

prepared for:

NATIONAL SCIENCE FOUNDATION
4201 Wilson Boulevard • Arlington, VA 22230

prepared by:

70 Essex Street • Mystic, CT 06355
[860] 536-0009 • <http://www.jmsnet.com> • jms@jmsnet.com

Scientific Outfitting and Facilities Scored **“Very Good”**

“All systems tested appeared to operate properly including the EM 122 Multibeam system, the Knudsen 3260 Chirp echosounder at 3.5 and 12 kHz, the flow through seawater system with associated sensors, the XBT system, both DI clean waters systems, the gravimeter, and the meteorological sensor system.”

“There appears to be an excellent program established to identify and document science related cabling in the labs and an initiative to remove unused cabling.”

Areas to Improve

- Laboratory Lighting
- Labeling of HazMat locations and sink drainage (addressed by MSTs)
- Dedicated Li Battery storage location

Mobilization

Seattle: Majority of science equipment loaded

Honolulu: Some items for RDC picked up (drifters, etc)

Seward: HLY1701 – RDC gear loaded and set-up

Dutch Harbor: HLY1703 and 1704 deck equipment swaps

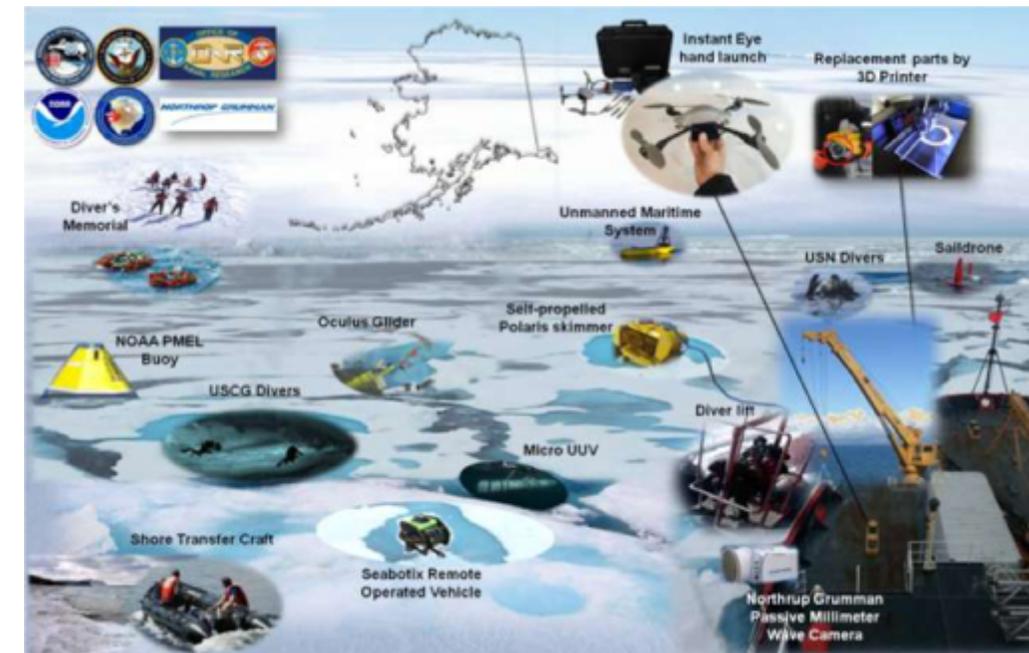

HLY 1701 – RDC

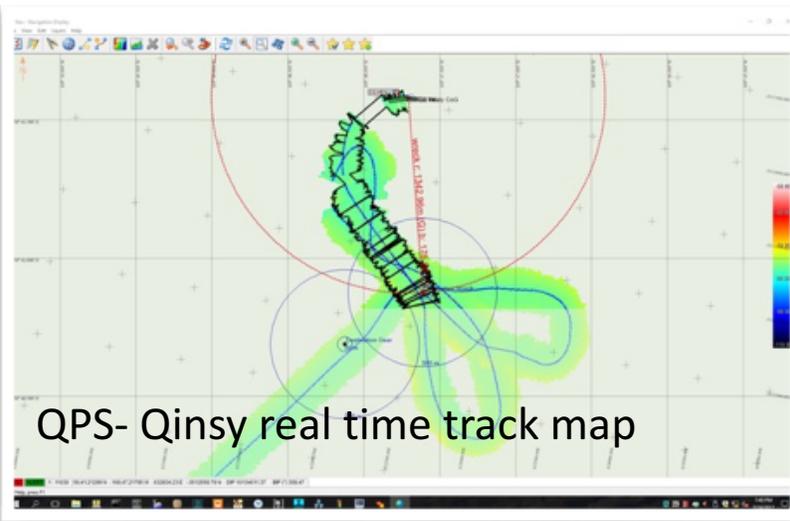

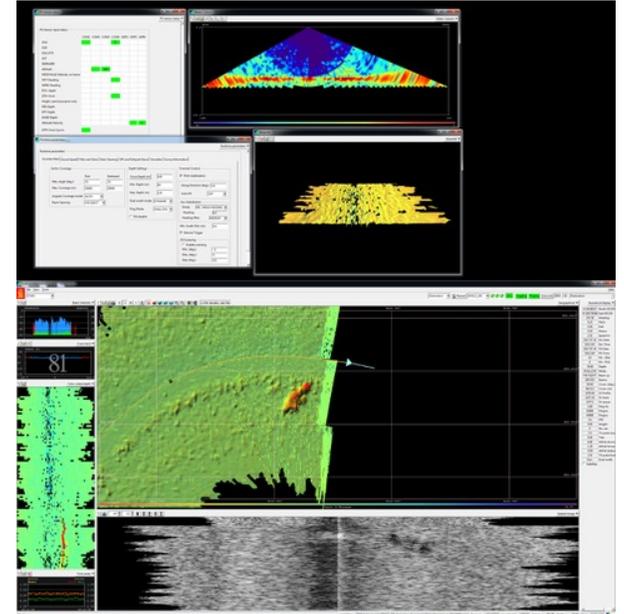

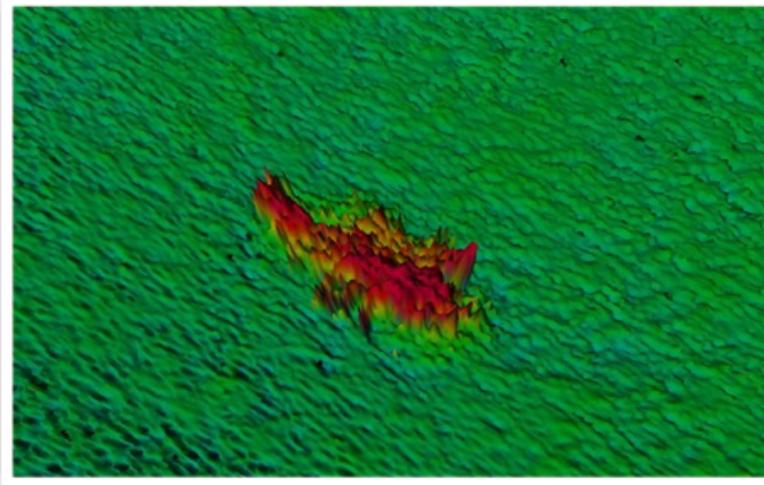

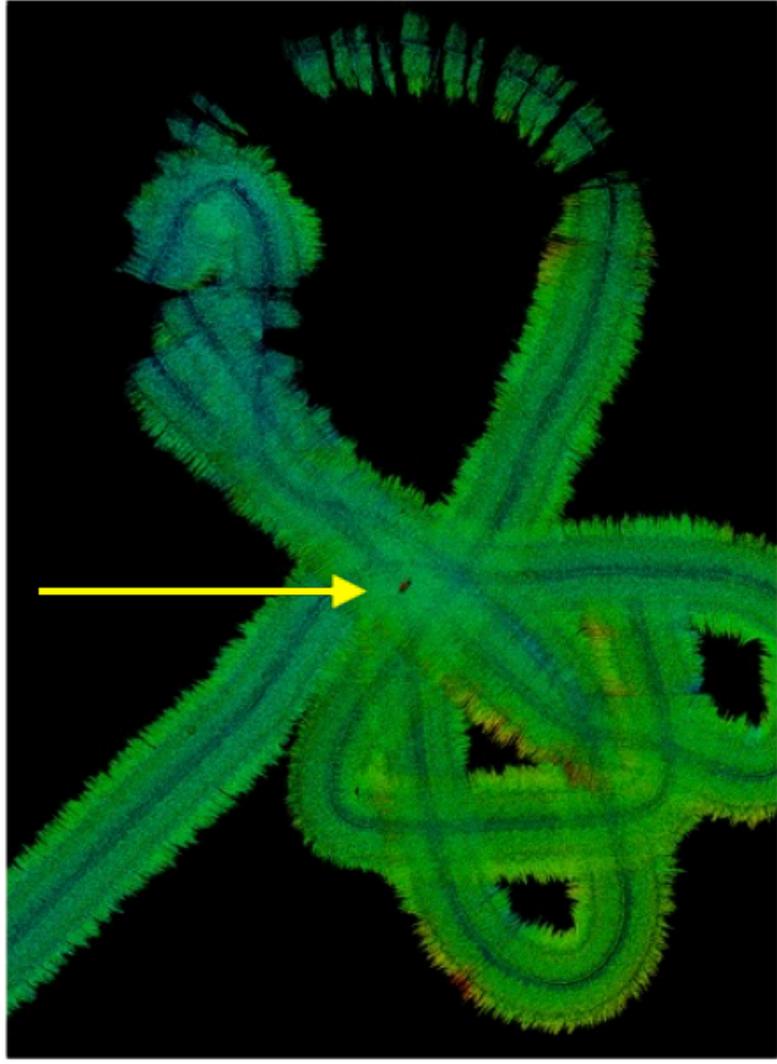

Chief Scientist – Scot Tripp

July 21 – Aug 11

- Diving Ops
Re-establish diving capability on Healy
- F/V Destination
Multibeam Mapping of wreck site
New QPS Software used to design survey
and drag for crab pot
- UAV/AUV and ROV Ops
- Oil Skimmer testing
- Moorings

F/V Destination Survey

QPS- Qinsy real time track map

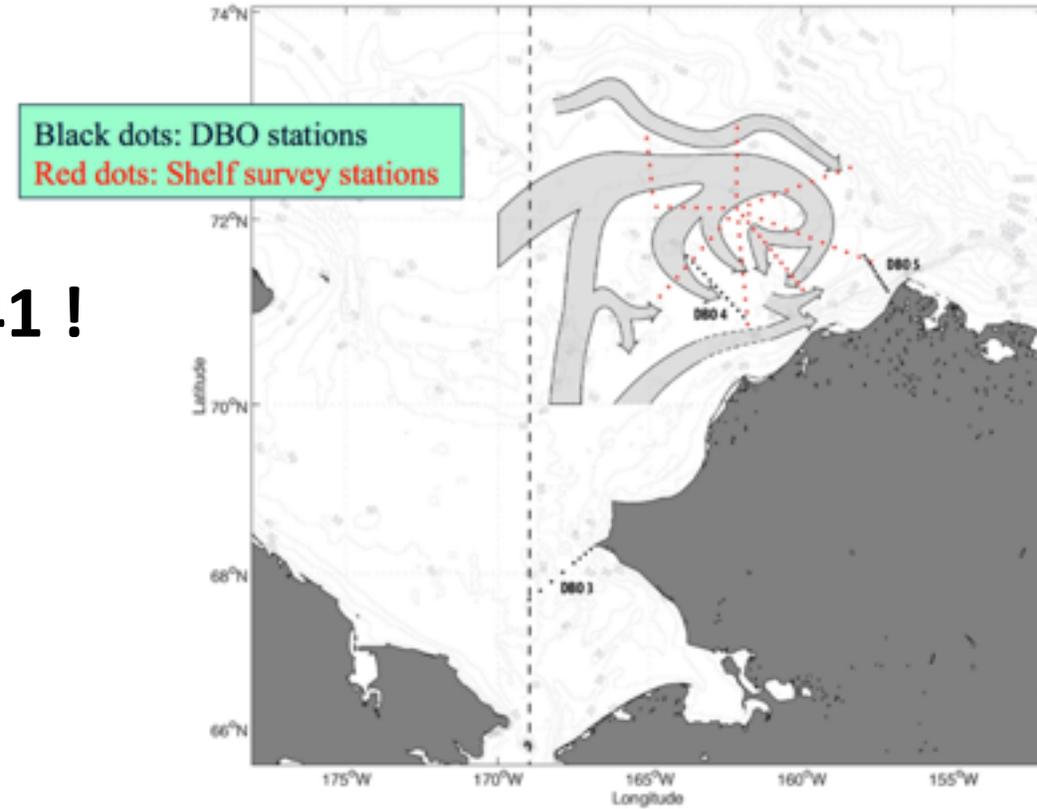

Chief Scientist – Bob Pickart

Aug 26 – Sept 14

- CTD Ops
100 planned stations, completed **141 !**
- Coring and Grabs
HAPS, Multi-HAPS, Van Veen
- Bongo Net Tows – NOAA
- Water Chemistry
- Underway Deployments
Up-Temp, Pop-up buoys

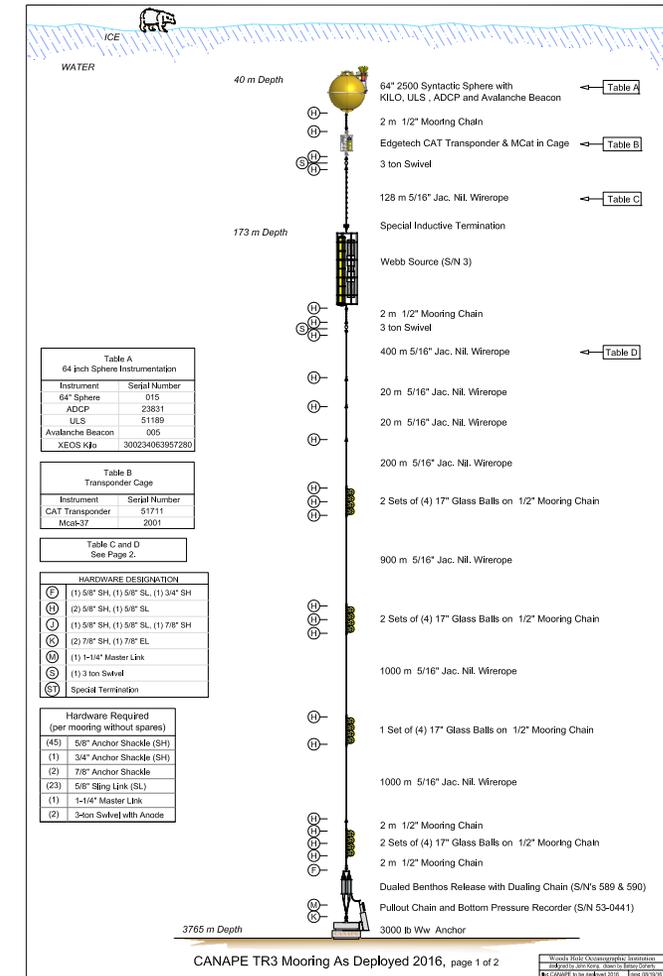

HLY1703 – CANAPE - Deep

Chief Scientist - Peter Worcester

Sept 19 – Oct 13 (early arrival on 11th)

- Mooring & Source Recoveries
Including Moorings for HLY1704
- CTDs
Usually two per mooring site
- Gliders
- Sub-bottom Echosounder Surveys
Head start on HLY1704 objectives
STARC assisted throughout entire survey
- Multibeam Surveys

HLY1704 – CANAPE - Shallow

Chief Scientist – Mohsen Badiey
Oct 17 – Nov 10

- Mooring Recoveries
 - Some difficulties with releases
 - Dragging Ops
- CTD Survey
 - Additional science sensors installed
 - Cold temps – heater on deck
- Multibeam and Echosounder transects
 - STARC highly involved (11 transects)
- Small boat ops in ice – Acoustics
- 11x Gravity Cores – with Acoustic sensors

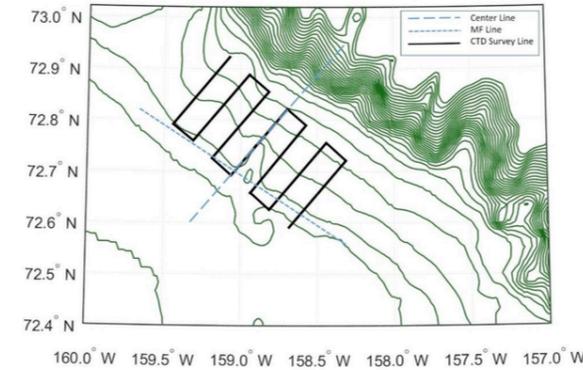

Figure 28. Proposed CTD survey lines for HLY1704.

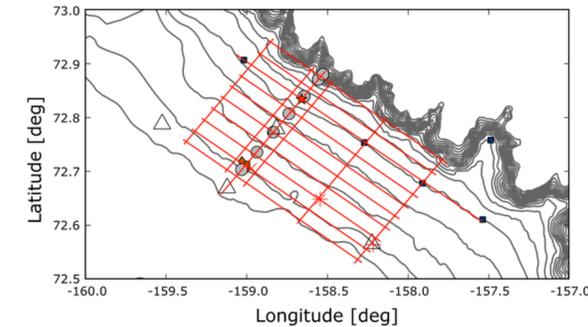

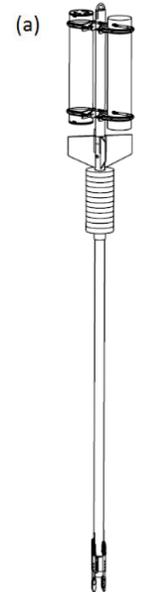

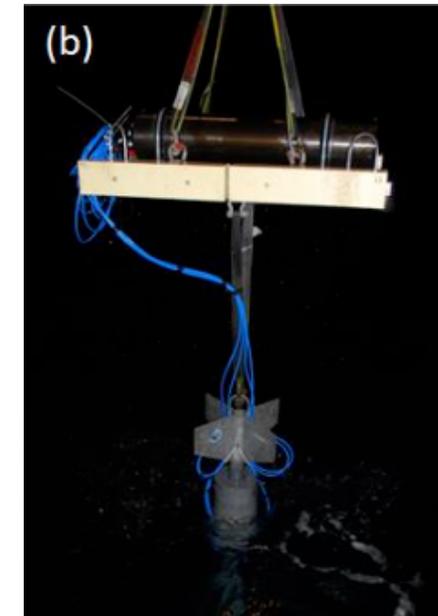

Figure 24. Proposed tracks for sub-bottom survey during HLY1704.

End of Season

- Sensors sent for calibration and repair
- SSW system flushed and secured
 - Discussions with Healy engineering for full system flush in progress
- Dockside maintenance period prep and planning
- Improvements to HCO antenna mounts (in progress)

Action Plan:

- ✓ Evaluate Mapserver features and identify highest priority functions for science users
 - AICC provided input regarding desired capabilities, Coordination with Coast Guard for bridge navigational needs (ice imagery display)
- ✓ Investigate and identify commercially supported software which may be able to replace core functions of Mapserver (Hypack, QPS-Qinsy, OpenCPN)
- ✓ Install, configure and test software aboard USCG Healy
- ✓ Evaluate software while underway to determine stability and capability
- ✓ Train technicians on use of software and develop SOPs for science missions
- ✓ Gather feedback from technicians and science users
- ✓ Communicate successes and challenges to the UNOLS research fleet at large and work to establish a collaboration that may be used on multiple platforms.
 - ✓ Discussions with Sikuliaq to collaborate on development of “Mapserver 2”
 - ✓ RCRV (OSU) is developing similar product....combine efforts ?

Map Server - Alternatives

QPS- Qinsy

- Experimental use in 2017
Implemented after departure from Seattle – short learning window
- On site training by QPS in Seward prior to HLY1702 (4 days)
- Includes Qimera and Fledermaus (available to Science)
- Available as situational awareness tool and real time data for Bridge
 - Valuable planning tool for HLY1701 F/V Destination survey and salvage.
 - All stations and work site for each cruise displayed

Open CPN

- Secondary situational awareness.
Track line, stations, ETA, watch circle, charts, etc

HyPack

- Light use in 2017
- Alternative to Qinsy
- Also able to be used as real time display for Bridge
 - Ice Imagery capability still being evaluated

Next Steps:

- Continue collaborative effort with UAF – Sikuliaq during joint cruise – SODA HLY1802
- Install hardware needed to run Mapserver on Healy (replace archaic original equip)

For 2018 season will continue to run with combined package of Qinsy, Hypack, and Open CPN

- Build database shore side
- Experiment with bringing in additional data streams
 - May need GIS style tools to combine ice images
- Higher level training for technicians

ActionPlan:

- ✓ Website audit and report by 3rd party web developer
 - Include recommended steps and options to maintain/upgrade or migrate
- ✓ Back-up current version of Icefloe.net website
- ✓ Create offline version of website locally and use as test sandbox
- ✓ Immediately bring website up to minimum acceptable security standards (SSL)
- ✓ Offline website updated to version 7.56 of Drupal
- ✓ Upgrade offline version of website to latest Drupal Modules, test for stability
- ✓ Correct content errors and address user complaints (case by case basis)
- Fix broken links, ship track-lines, and aloft-con imagery
 - Partially complete
- Improve user experience with new/modern theme.
- Improve Mobile / Tablet functionality
- Address Cruise Planning Form problems. (UNOLS Cruise Planning Portal?)
- Update content links – USCG Mission Blog, USCG Healy site, Confluence Wiki, etc

Dead Link Checker

- Most *external* links are no longer active
- Some *internal* links are no longer pointing to correct locations
- Clean-up is underway – done manually, very tedious work need to check each link individually

Ties into identifying scope and scale of icefloe.net, determining what is relevant vs. archival. Overall goal of the site?

Icefloe.net – Back up and Updates

Backed up original site and data

- Update from Drupal core 6.28 to 7.56 is a major update

Most broken features are due to out of date modules or version incompatibility

- Current theme is not compatible with new version – trying to overhaul theme to function with core upgrade is running into problems

Or... choose new theme altogether?

Enabled	Name	Version	Description	Operations
✘	ImageAPI	6.x-1.10	ImageAPI supporting multiple toolkits. This version is not compatible with Drupal 7.x and should be replaced. Required by: ImageCache (disabled), ImageCache UI (disabled)	
✘	ImageAPI GD2	6.x-1.10	Uses PHP's built-in GD2 Image processing support. This version is not compatible with Drupal 7.x and should be replaced.	
✘	ImageAPI ImageMagick	6.x-1.10	Command Line ImageMagick support. This version is not compatible with Drupal 7.x and should be replaced.	
✘	ImageCache	6.x-2.0-rc1	Dynamic image manipulator and cache. This version is not compatible with Drupal 7.x and should be replaced. Requires: ImageAPI (incompatible with this version of Drupal core) Required by: ImageCache UI (disabled)	
✘	ImageCache UI	6.x-2.0-rc1	ImageCache User Interface. This version is not compatible with Drupal 7.x and should be replaced. Requires: ImageCache (incompatible with this version of Drupal core), ImageAPI (incompatible with this version of Drupal core)	

Disabled themes

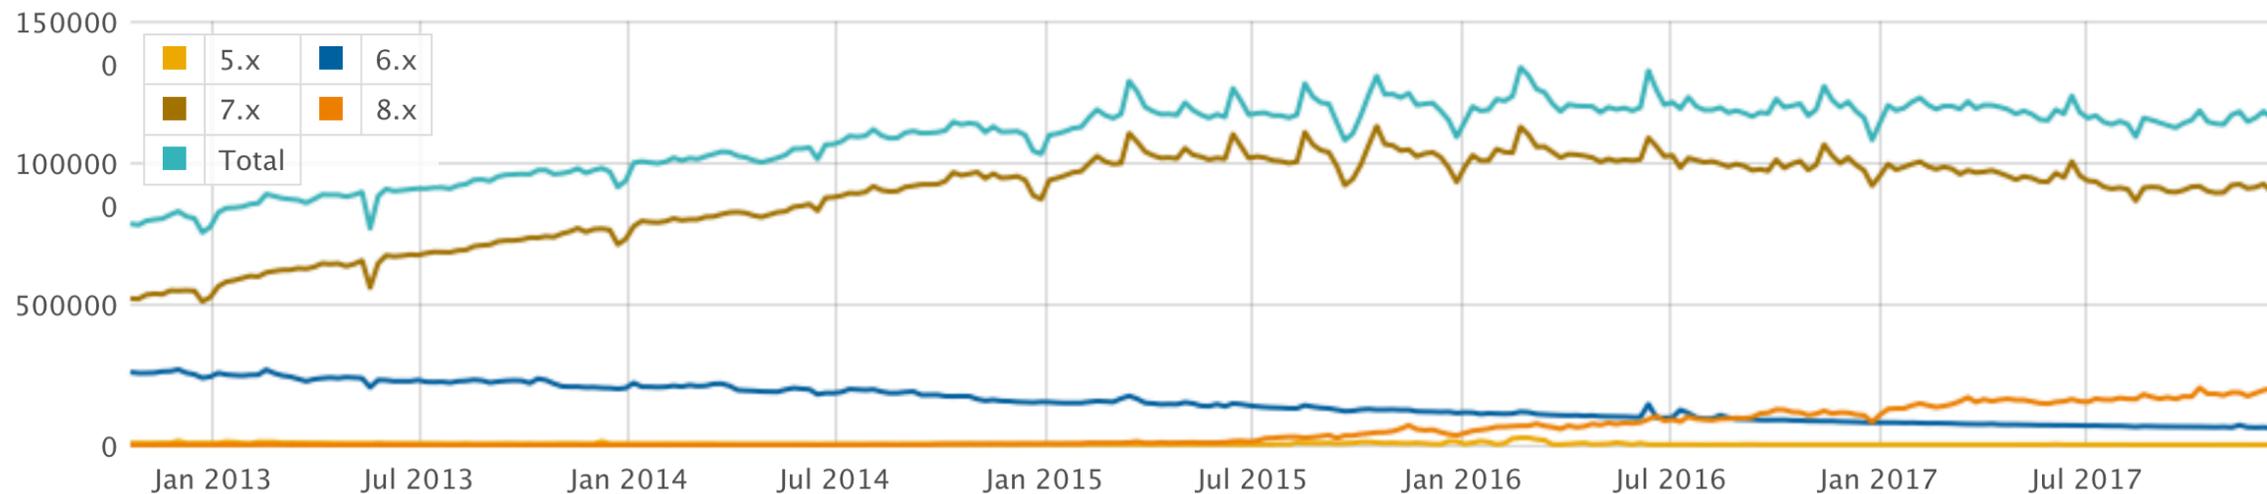

Bartik 7.56
A flexible, recolorable theme with many regions.

Weekly project usage

Summary and Next Steps:

Firm understanding of the barriers to update, continue to build and test offline site, getting closer to stable version.

- Identify scope and scale of icefloe.net going forward
 - Requesting input from USCG, NSF and AICC
- Evaluate UNOLS Cruise Planning Portal
- Theme preferences – colors, feel, layout?
 - Info centric vs. imagery?
 - Wiki style ?
- Demo updated site to USCG /community, and receive feedback
- Implement any requested changes
- Pick a time to publish updated site? Not to interrupt cruise planning season

Define site maintenance vs. higher level development efforts

- At a minimum needs to be considered annually (security, updates, etc)

Action Plan:

- ✓ Impedance testing for all TX/RX transducers and Kongsberg review of results
- ✓ On site Kongsberg technician support- dockside ship visit and underway time
- ✓ UPS (Uninterrupted Power Supply) sent to manufacturer for repair and new batteries
- ✓ Routine maintenance conducted prior to getting underway for Shakedown
- ✓ Fiber Optic and Serial connections traced, serviced, verified, and documented.
- ✓ UNOLS Multibeam Advisory Committee aboard to assess performance of system
- ✓ Update Sound Velocity Profile Software and verify transfer of data to multibeam
- ✓ BIST (Built in Self Test) conducted weekly to accumulate season long history

Summary and Next Steps

- Overall the health of system is 'within spec' although may be showing symptoms of degradation.
- Noise is still high concern.
 - Work with Healy engineering to diagnose.
- Use impedance analyzer for high latitude testing (SIO owned)
- Continue BIST regimen
- Visual Inspection during Dry Dock 2019
 - Coordinate with Kongsberg
- Continue discussions with MAC – deep swath
- Noise Assessment – Gates Acoustic (after DryDock)

Identified Projects so far....

- Ash Tech replacement (Trimble ABX-Two)
- AG132 replacement
- Antenna Verification Survey (dockside)
- Computer lab UPS – networking
- Computing Cluster – Mapserver, network monitoring
- Chirp 3260 Deck Unit
- New Milli-Q
- Resolve intermittent scoreboard problems
- Reference Hydrophone Equipment

Currently in late planning stages

STARC is participating in meetings with USCG

Projects under discussion:

- 12kHz Transducer Replacement
- EM122 Inspection
- Bow Kickpipes
- Formal instrument and antenna survey
- Fiber Optic Upgrades

Questions for AICC

Data Access Policy

- Policy for making data available to 3rd party users (Gravimeter, PCO₂, science party onboard)

Icefloe scope and scale

- Prioritized discussion relating to site features, intent, design, and content
- Develop support model to keep pace with security standards and software releases

Questions for STARC ?

Thank You
