R2R Mission

To ensure the long-term preservation and broad distribution of the environmental sensor data routinely acquired on expeditions of the U.S. academic research fleet

R2R Services

R2R Services:

- Publish master cruise catalog
- Organize, archive, and disseminate original underway data and documents
- Assess data quality
- Create post-field data products
- Support at-sea event logging

Arrival of Cruise Data at R2R

Number of days between end of cruise and data delivery to R2R

Colored by Operator

Some Operators send a full year of data at once, typically early spring.

Best Practice: Data should be sent routinely through the year to optimize

- timely evaluation of problems
- data access for user community

Metadata may be provided using:

- Standard UNOLS XLS format
- R2R XML format (prototyping with Ocean Exploration Trust)
- Custom designed, consistently used metadata format that provides same, or more, information

Documenting Time Sources

- Fleet wide survey of time servers
 - 12 vessels use time servers
 - 4 vessels do not use time servers
 - 4 vessels did not respond to the survey
- Detailed work with RV Neil Armstrong
 - Parent time source and acquisition software information collected for 22 devices
- All time server information and relationships preserved in database

Time Sources are important! Contact R2R to include your vessel.
