UNOLS Committee for Maintaining an Environment of Respect Aboard Ships (MERAS)

- Medical privacy, pregnancy policies
- Promotion of civility, respect
- Prevention of harassment, discrimination, bullying

Committee Membership:
- Debbie Steinberg/VIMS (Co-Chair)
- Mark Brzezinski/UCSB (Co-Chair)
- Craig Lee/UW
- Clare Reimers/OSU
- Emily Shimada/WHOI
- Brandi Murphy/UW
- Assisted by: UNOLS Office- Alice, Annette, Caitlin, & Jon
Current MERAS activities

- Script development, consulting for video project
- Request from NSF - Development of a white-paper providing broader guidance to operators for “milestone” ceremonies done onboard the vessels or while loading/unloading in port (e.g., equator or date-line crossings, first ALVIN dives, end of cruise celebrations)
  - Hazing not ok
  - But benefits to ceremonies (comaraderie) if done appropriately

GUIDANCE TO SHIP OPERATORS AND SEAGOING SCIENTISTS CONCERNING CROSSING AND OTHER MILESTONE CEREMONIES ABOARD SHIP OR IN PORT

University National Oceanographic Laboratories System (UNOLS)
Maintaining an Environment of Respect Aboard Ships (MERAS) committee

Morale and teamwork play vital roles in the efficiency, success and safety of oceanographic research, especially by improving communication between all participants. As such, activities that encourage collaboration are beneficial to the success of the science mission. Scientists and crew must be able to work together, guided by policies that promote respect and supportive interactions. Recognition of milestones, noteworthy geographic crossings, and celebrations of achievements are encouraged by MERAS. These activities should be welcoming, triumphant, and fun—not divisive or “othering”.

Ceremonies that commemorate line crossings (e.g., equator, date-line, polar circle) or other achievements as significant life-events for scientists and crew are encouraged. But these events should be designed to be welcoming, celebratory, and free of harassment and hazing. Supervisors (e.g., captain, chief scientist) should ensure that all participants are treated with dignity and respect during such events.

Crossing ceremonies have traditionally drawn a line between experienced and inexperienced crew (including science) members requiring a ritual to join the ranks of the experienced or initiated. Some associated activities, however, stemming from old maritime rituals can be demeaning and border on hazing. This kind of activity, while intended in fun, can distance individuals from feeling welcome or even cause some to reconsider pursuing a career at sea. Behavior that is degrading, embarrassing, or injurious is hazing; it is unprofessional, and it is illegal. Actual or implied consent to acts of hazing does not eliminate the culpability of the perpetrator.

Hazing can include, but is not limited to the following:

· Verbal abuse or threatening bodily harm
· Shaving, greasing or painting an individual or group of individuals
· Excessive physical activity
· Requiring consumption of food, alcohol or drugs
· Smearing or coating the body or clothes with dangerous or unsavory substances
· Requiring actions or skits with demeaning or sexual connotations

Opting out of these activities, can further “other” individuals unwilling to participate. This separation divides teams rather than bringing them together. This othering can be avoided. Using a crossing ceremony as an example, supervisors should inform cruise personnel that participation in a recognition ceremony is voluntary and will not include any rituals or tasks required of participants. It should also make clear that anyone wishing to receive a certificate commemorating the milestone will be issued one—regardless of whether or not they choose to
