Elephant Island, Smith Island, Low Island Chinstrap Census

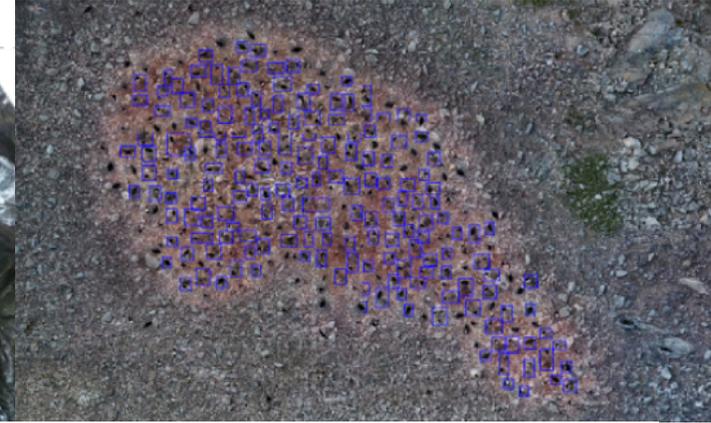

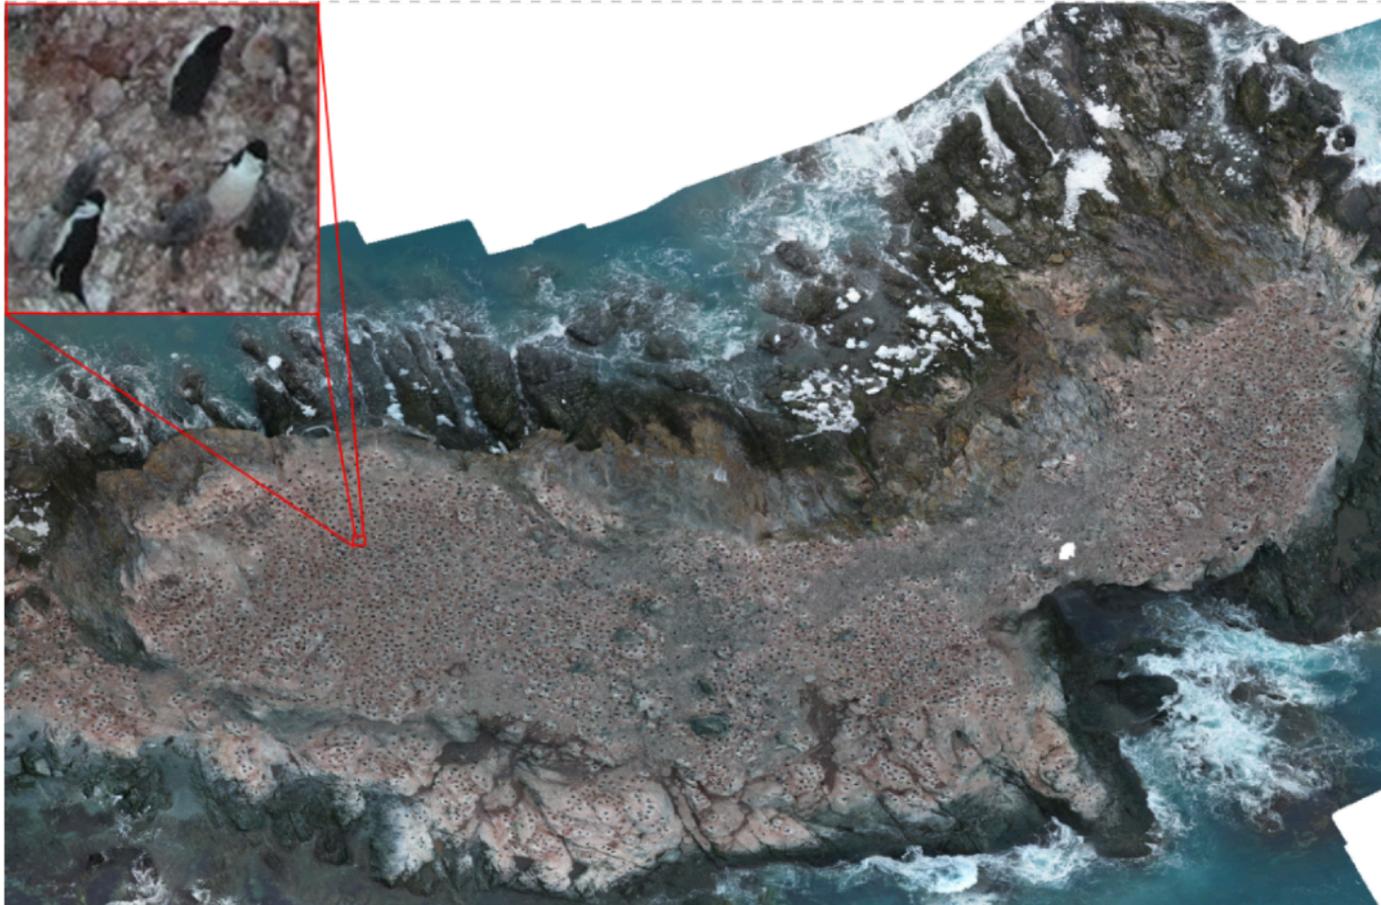

Alarm over collapse of chinstrap penguin numbers

Global heating suspected to be behind sharp decline in populations across Antarctic islands

Penguin Census – Danger Islands (Jenouvrier et al)

The New York Times

SCIENCE

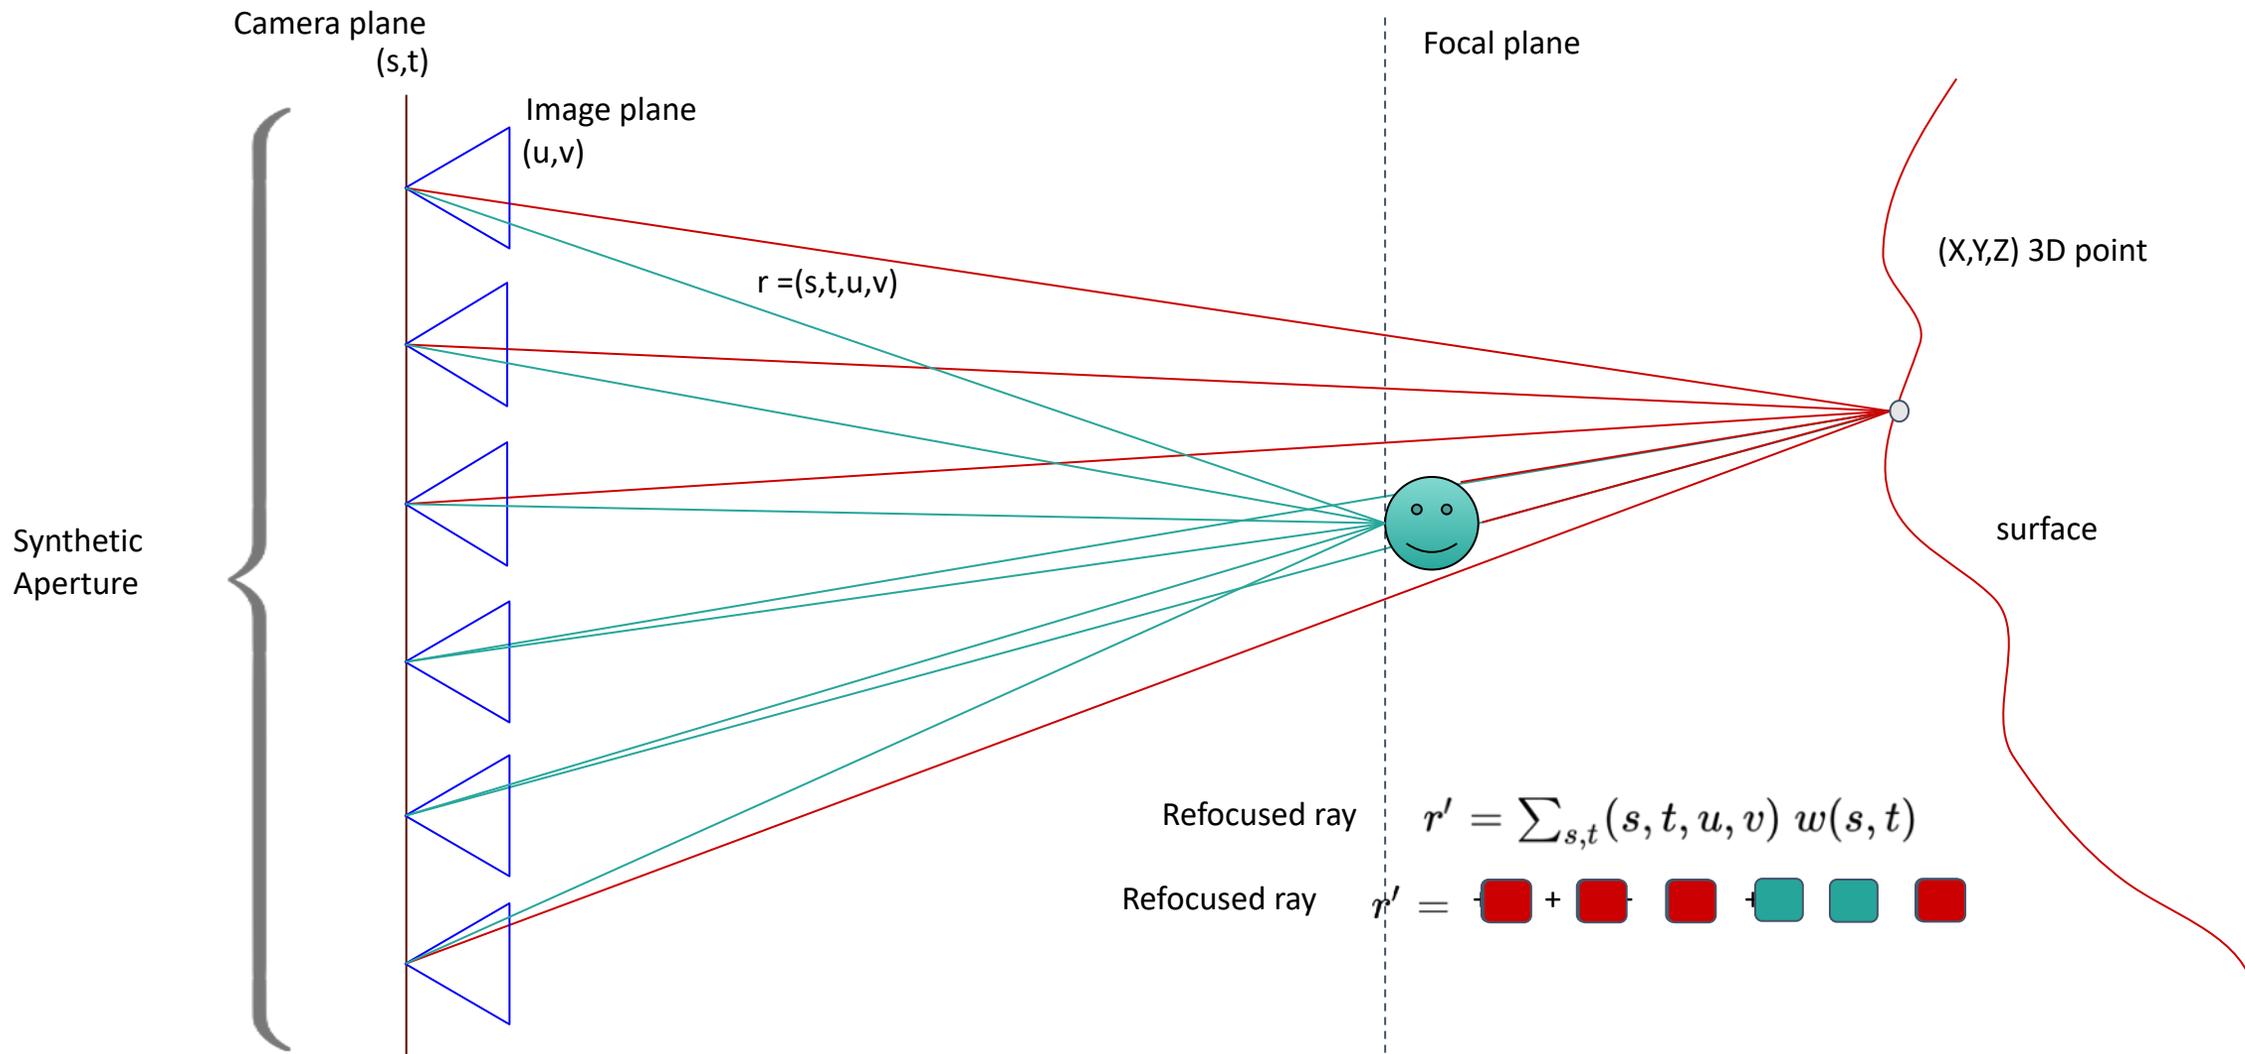

A Supercolony of Penguins Has Been Found Near Antarctica

Satellite images and a drone discovered about 1.5 million Adélie penguins living in the Danger Islands, one of two species whose habitats require ice.

3D Reconstructions from 4 S-UAVs of Dynamic scene with people Walking

Above: Images of people walking across in 1 second duration from 4 S-UAVs captured at 20 Hz, from viewpoints shown in left image.

Multiple S-UAVs for Synchronous Wide Baseline Imaging

Using Multiple S-UAV in dynamic environments for:

1. Wide baseline, pseudo camera arrays for configurable depth error or resolution(/ Field of View).
2. Dynamic Baseline: Dynamically vary the Shape of camera arrays with multi UAV Formation
3. Maintain a stationary View points in comparison to ship based stereo.(Eg: Looking at Waves)
4. 3D Mobility: Follow the dynamic objects in scene.
