

➤ USBL System Optimisation

Duncan Rigg

RVTEC 2025 – San Diego – November 2025

➤ What is USBL?

➤ How does it work?

Transceiver face comprises two acoustic element types, which are recessed into high grade plastic and encapsulated in polyurethane:

- 1 x transmit
- A number of receivers

➤ How does it work?

SLANT RANGE

2-way acoustic travel time and sound speed measurements used to calculate Slant Range

AZIMUTH

As the returning acoustic pulse passes over the transceiver, the time of arrival is measured for all elements.

The difference is used to calculate the angle from the forward mark (Ship's Head)

ELEVATION

Time of arrival (phase) and signal amplitude are analysed to calculate the elevation angular offset

Part 1 – Considerations

➤ Q1: What will the system be used for?

➤ Q2: How and where will the system be deployed?

Reduce received noise

Clear aerated water

Repeatable position when deployed

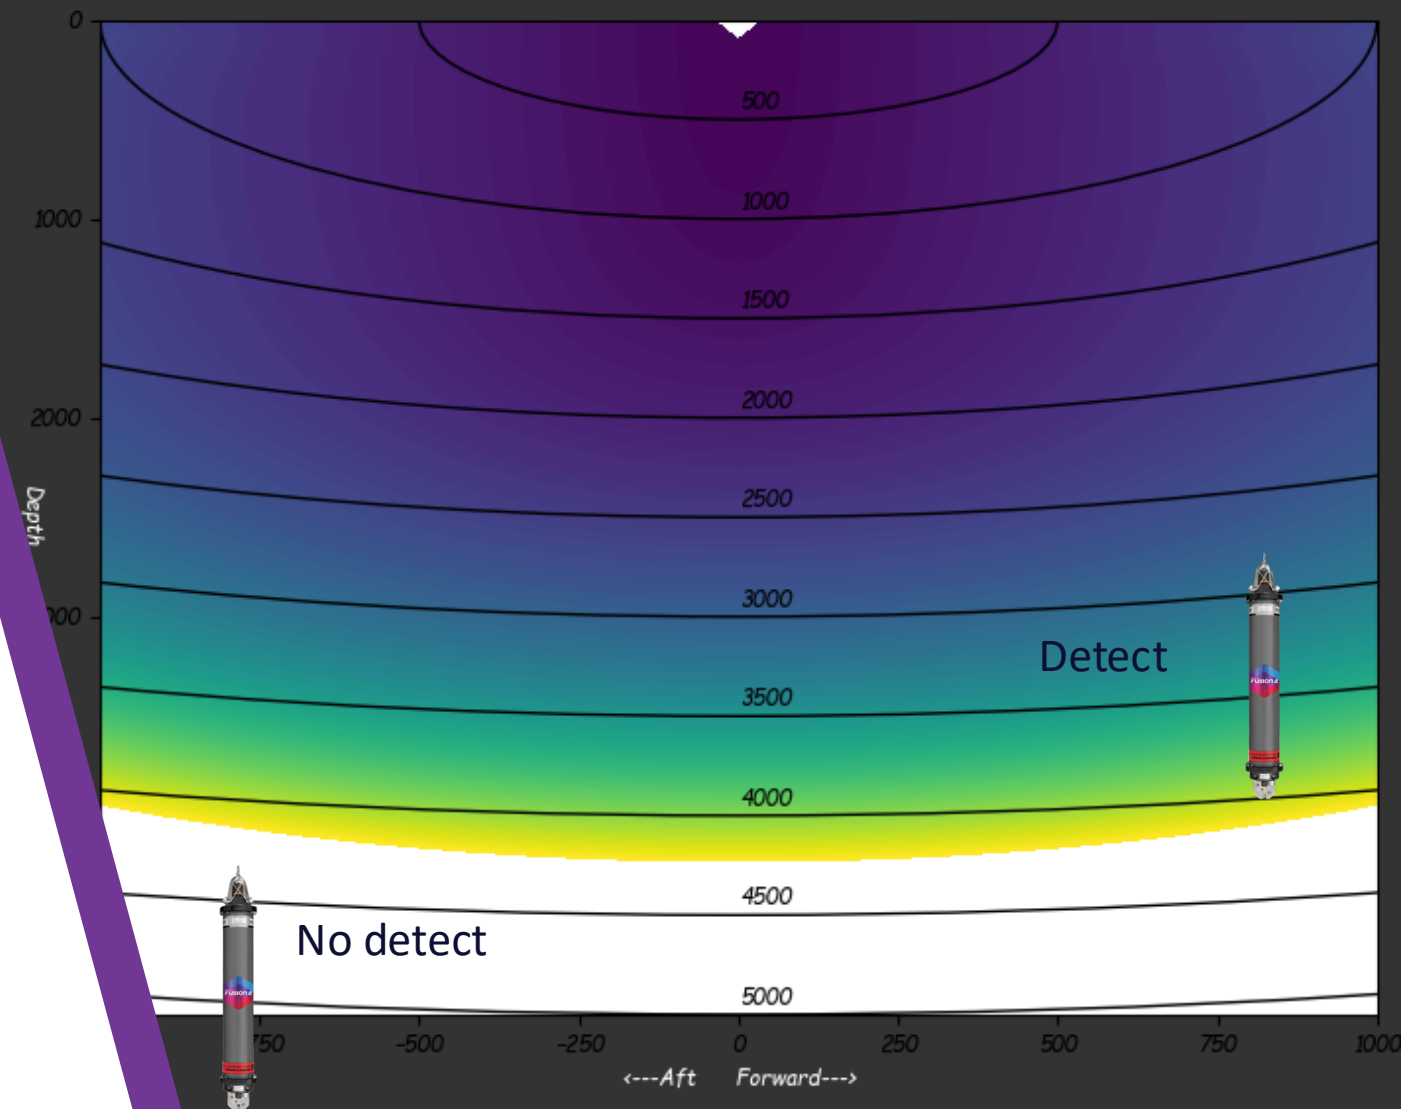

Vibration resistant

➤ Noise modelling

Modelling system performance helps eliminate issues before they occur

- Will my beacons have enough sound energy?
- What range should I expect from the system?
- What affect does moving the deployment system have?
- Is there any benefit in tilting the transceiver?

Plot Slice: Forward - Aft [v] Plot

Max port: 1000 Max forward: 500

Max starboard: 1000 Max aft: 500

SNR plot: 20 Range Lines: 500

Point Result					
x (port-stbd)	0.000	1drms	14.632	%	
y (fwd-aft)	-987.688	sd x	14.201	Abs	
z (depth)	4447.260	sd y	3.525	Spr	
Slant Range	4555.617	sd z	2.174	Bea	

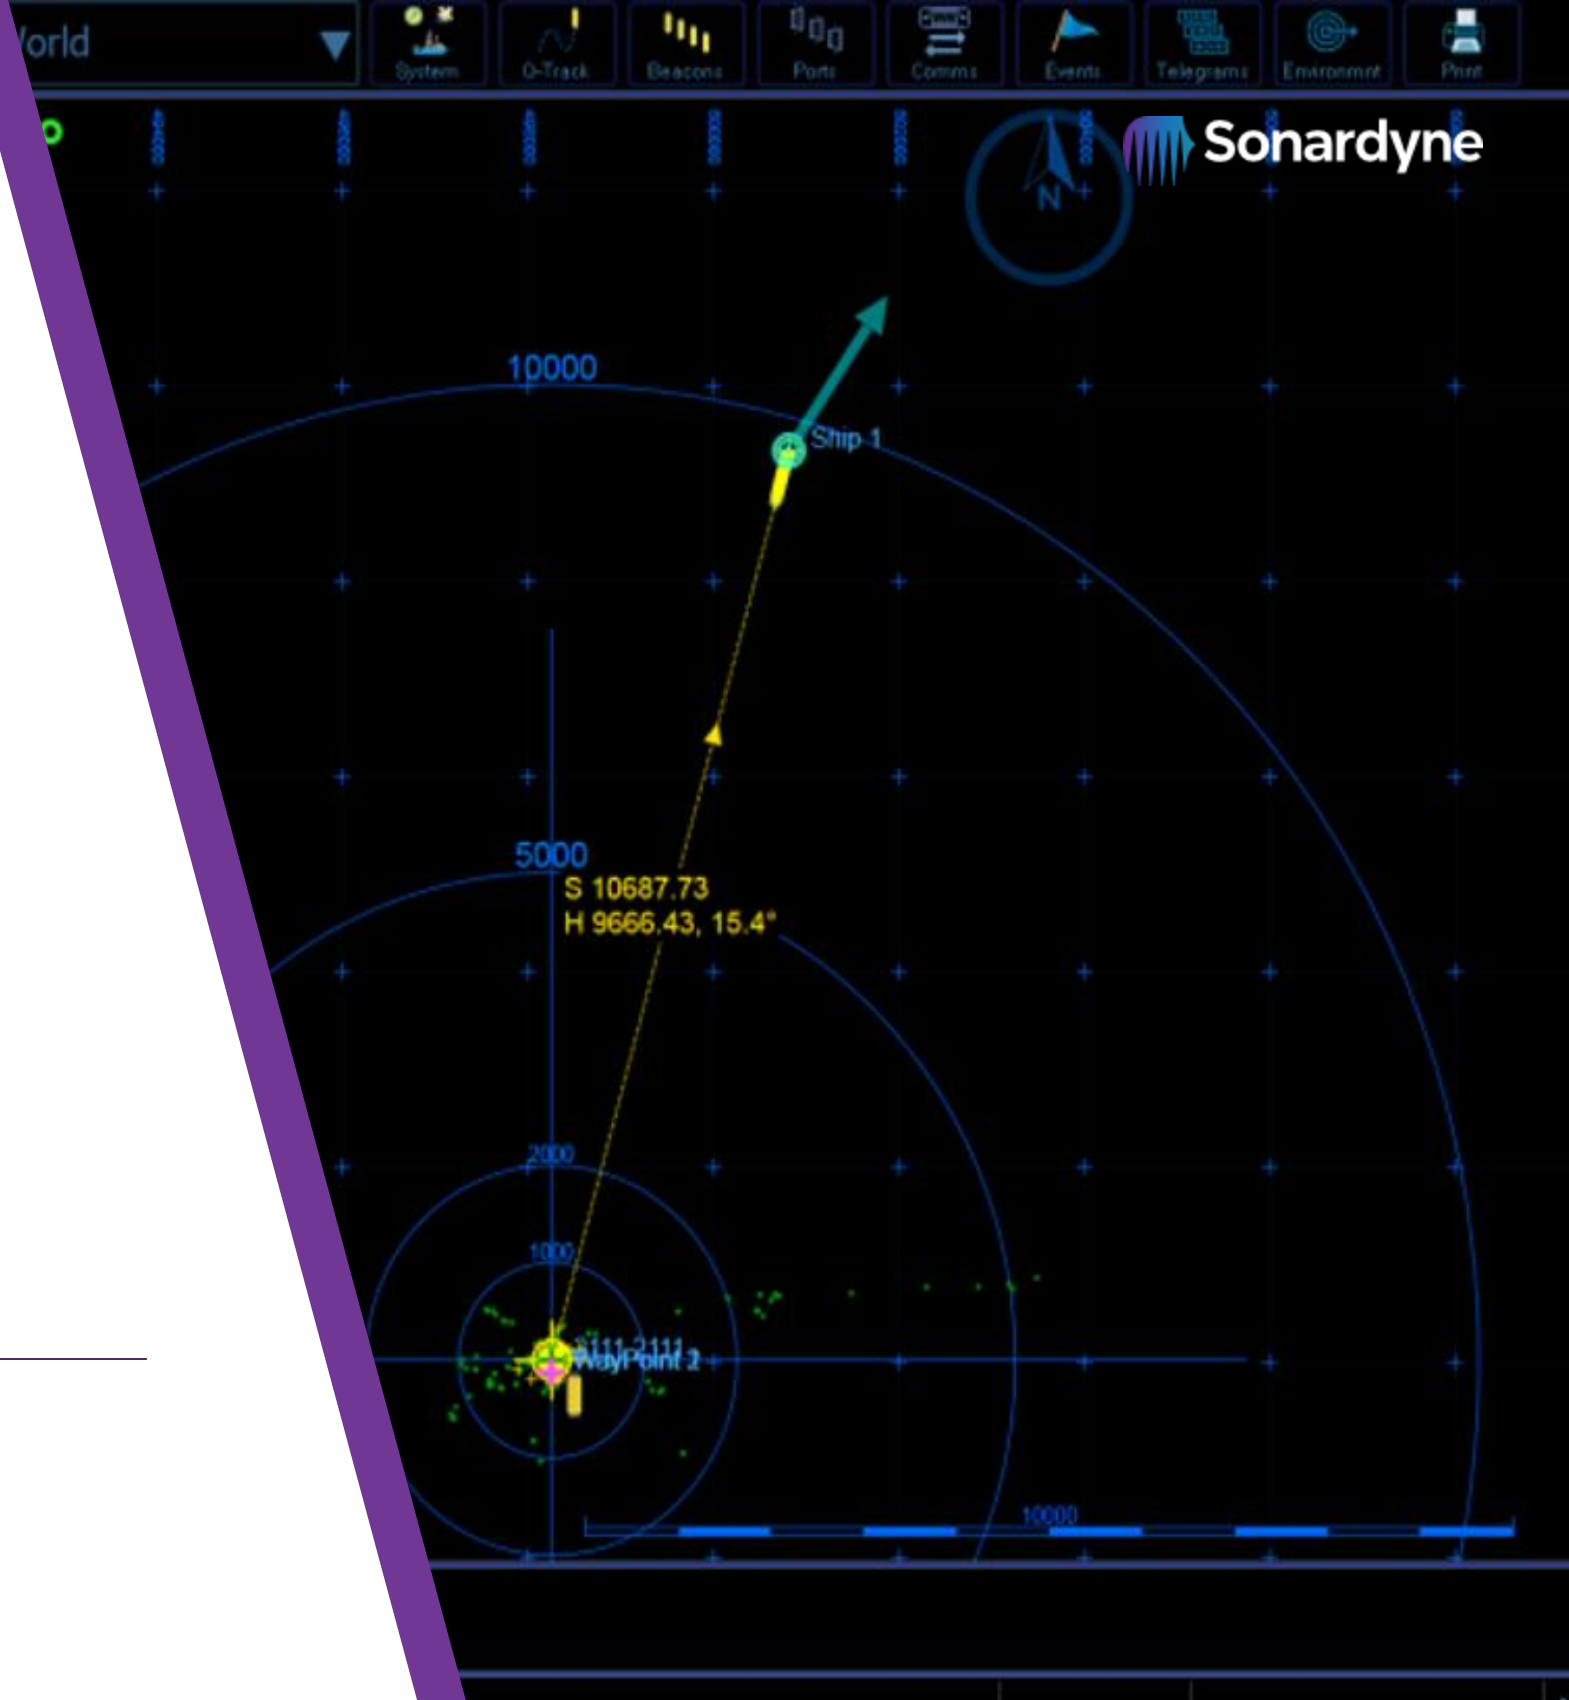

➤ Additional options

| **Long-range** – determined by frequency

| **Inertial navigation** – Improved precision, fast update rate, reduced acoustic traffic, improved battery life

| **Transponders** – type, capability, depth rating

| **Acoustic release / Modem**

➤ Compare like-for-like

we're both fruit

From $X \downarrow$ to $Y \rightarrow$	RMS (σ)	CEP	DRMS	R95	2DRMS	R99.7
RMS (σ)	1.00	1.18	1.41	2.45	2.83	3.41
CEP	0.849	1.00	1.20	2.08	2.40	2.90
DRMS	0.707	0.833	1.00	1.73	2.00	2.41
R95	0.409	0.481	0.578	1.00	1.16	1.39
2DRMS	0.354	0.416	0.500	0.865	1.00	1.21
R99.7	0.293	0.345	0.415	0.718	0.830	1.00

Part 2 – System Optimisation

➤ Noise

Frequency management

Monitor for noise sources that impact USBL

➤ Noise - examples

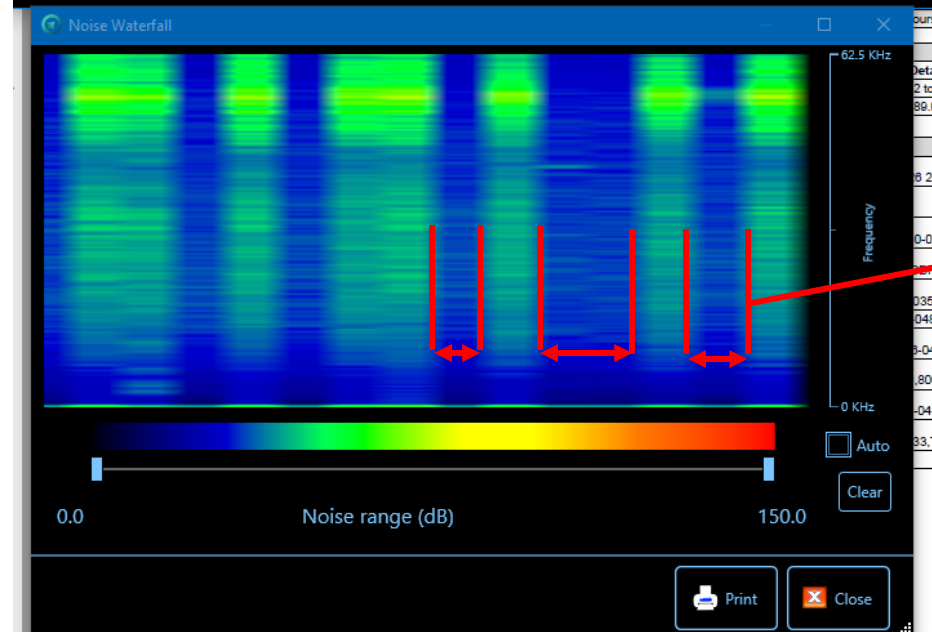

Outside of regular USBL window, but may still cause interference

Current, average and peak all similar so a regular occurrence

Frequency spikes at 55kHz

Bandwidth 45kHz – 65kHz

1 Hz update rate

➤ Noise - examples

**Current, average similar
but peak much higher**

**Bandwidth across all
channels**

➤ Maintenance

➤ Competency

➤ Part 3 – Fine tuning

➤ Signal diagnostics – surface

Improve system performance

Monitor in real time signal quality

 Sonardyne

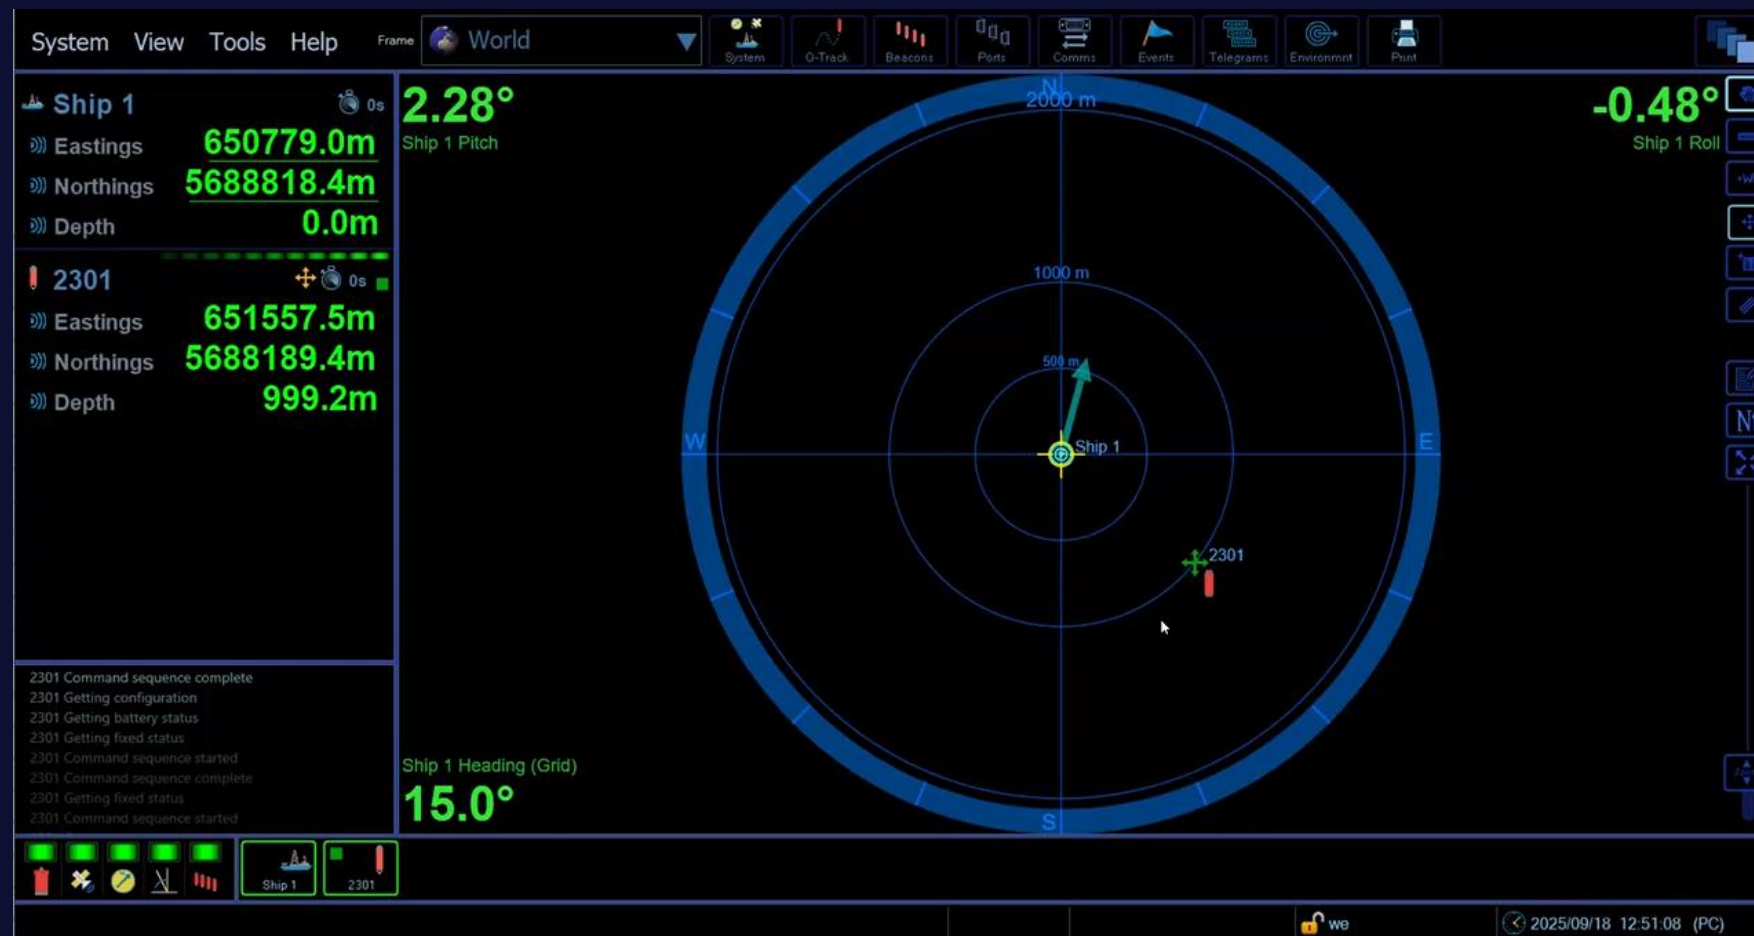

➤ Signal diagnostics – subsea

Use acoustic comms link to measure subsea environment

Remotely change settings to improve performance

Monitor for changes

➤ High-elevation tracking

Susceptible to interference from surface noise (waves, vessel etc)

Thermoclines have maximum impact at surface

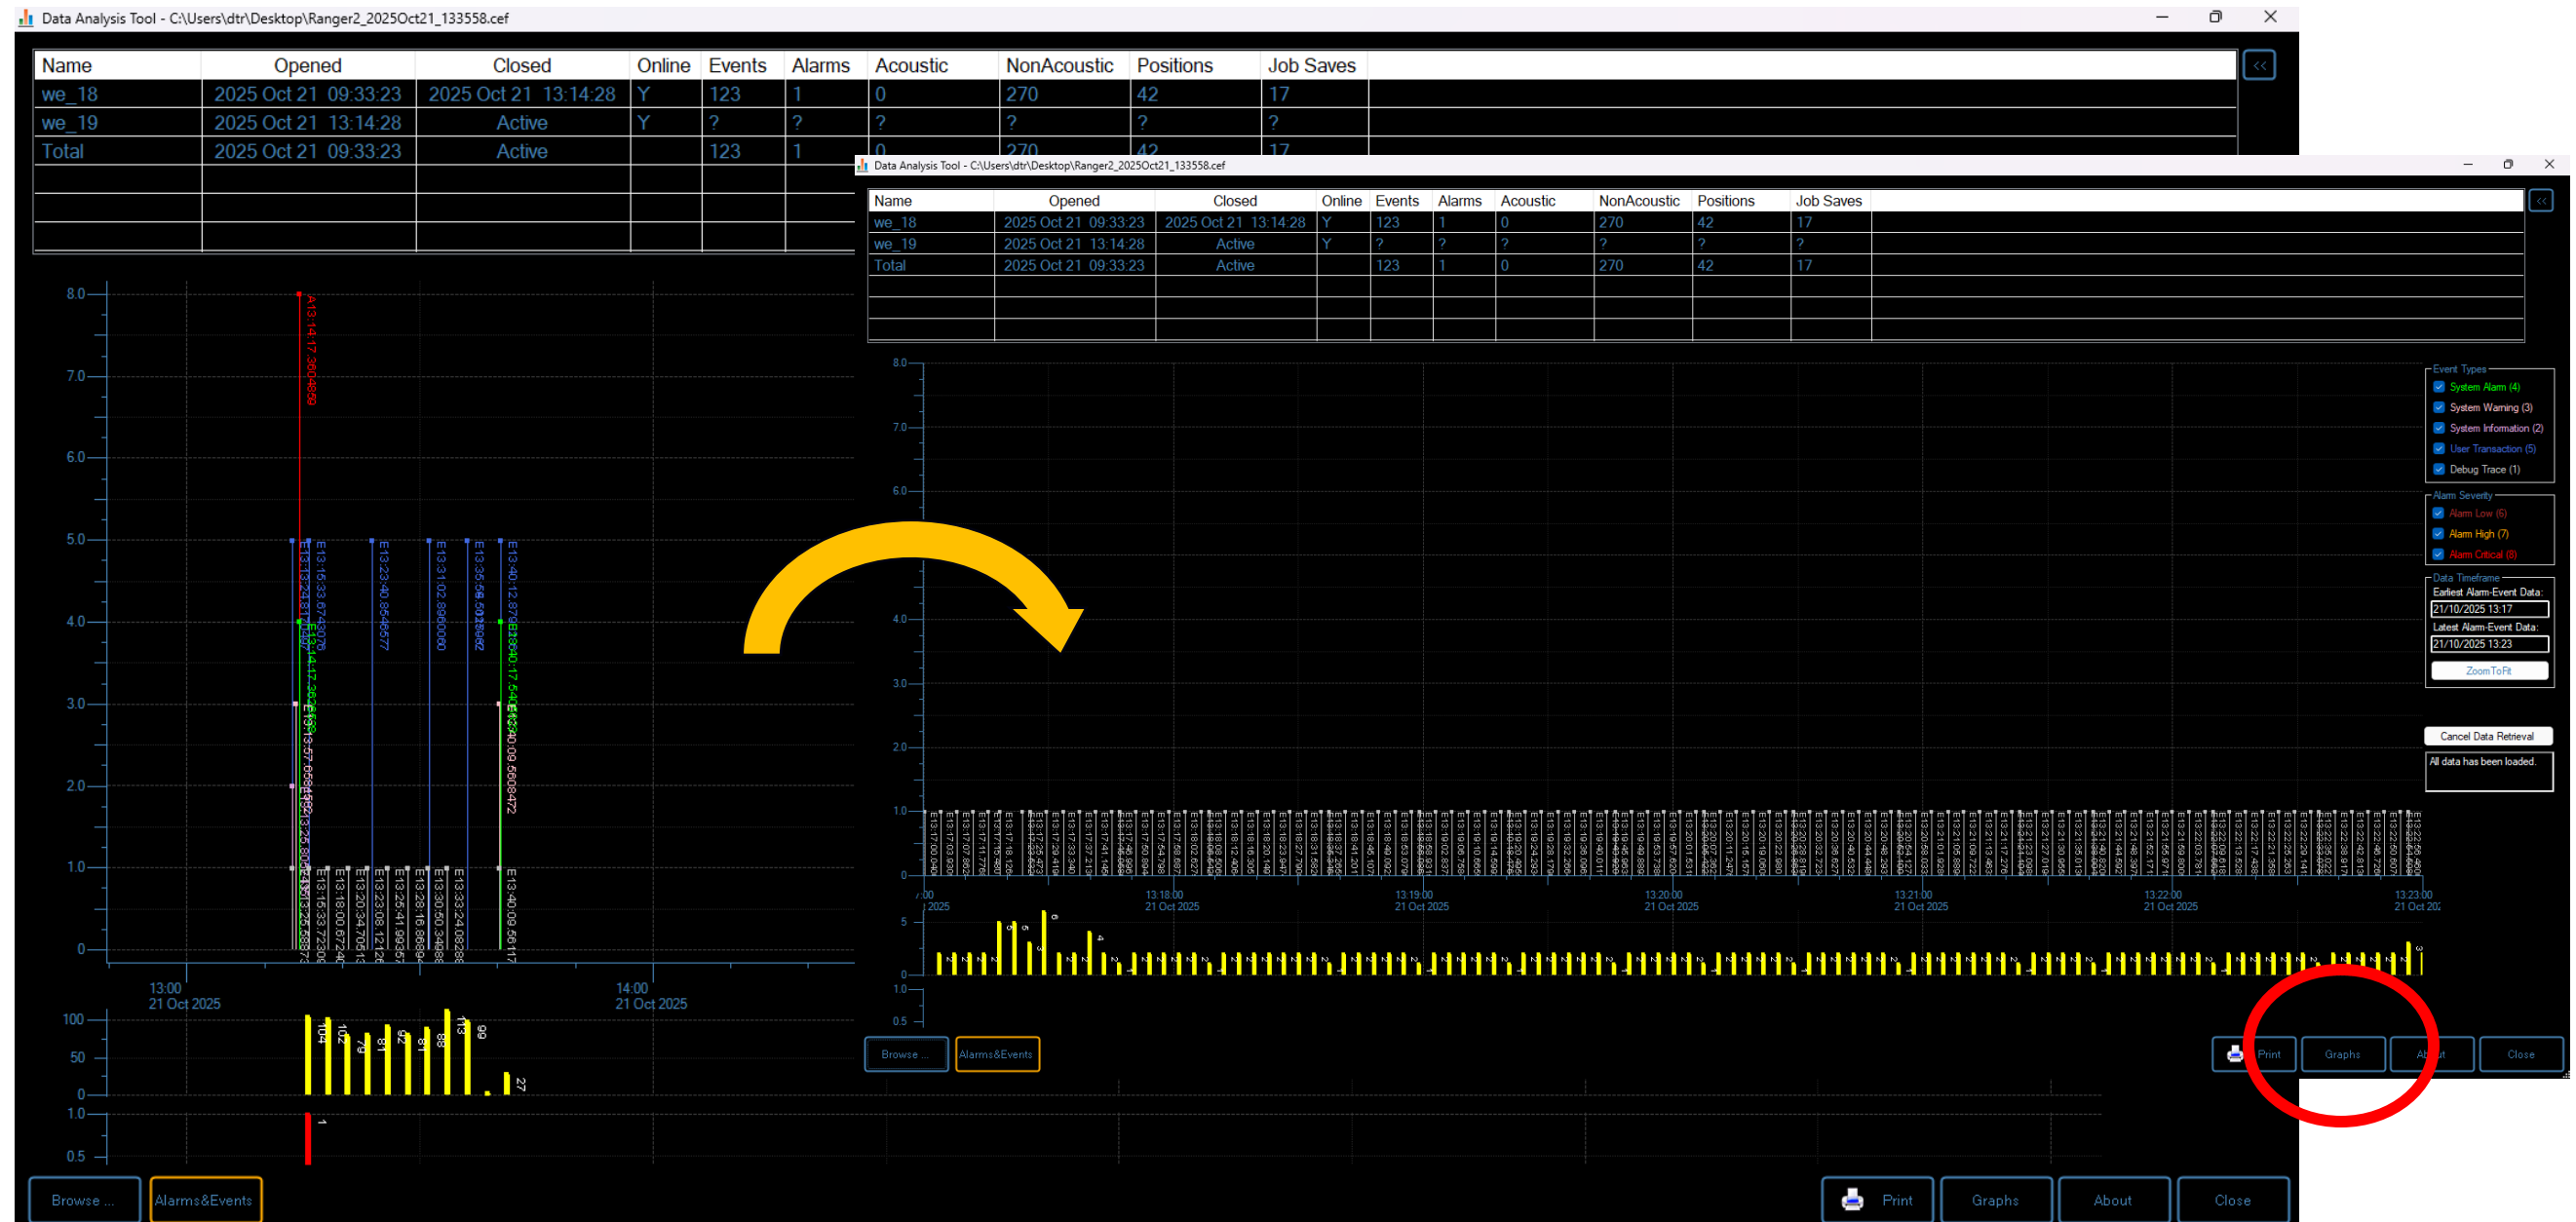

Use beacon or 3rd party depth sensor

➤ Part 3 – Data Analysis Tool (DAT)

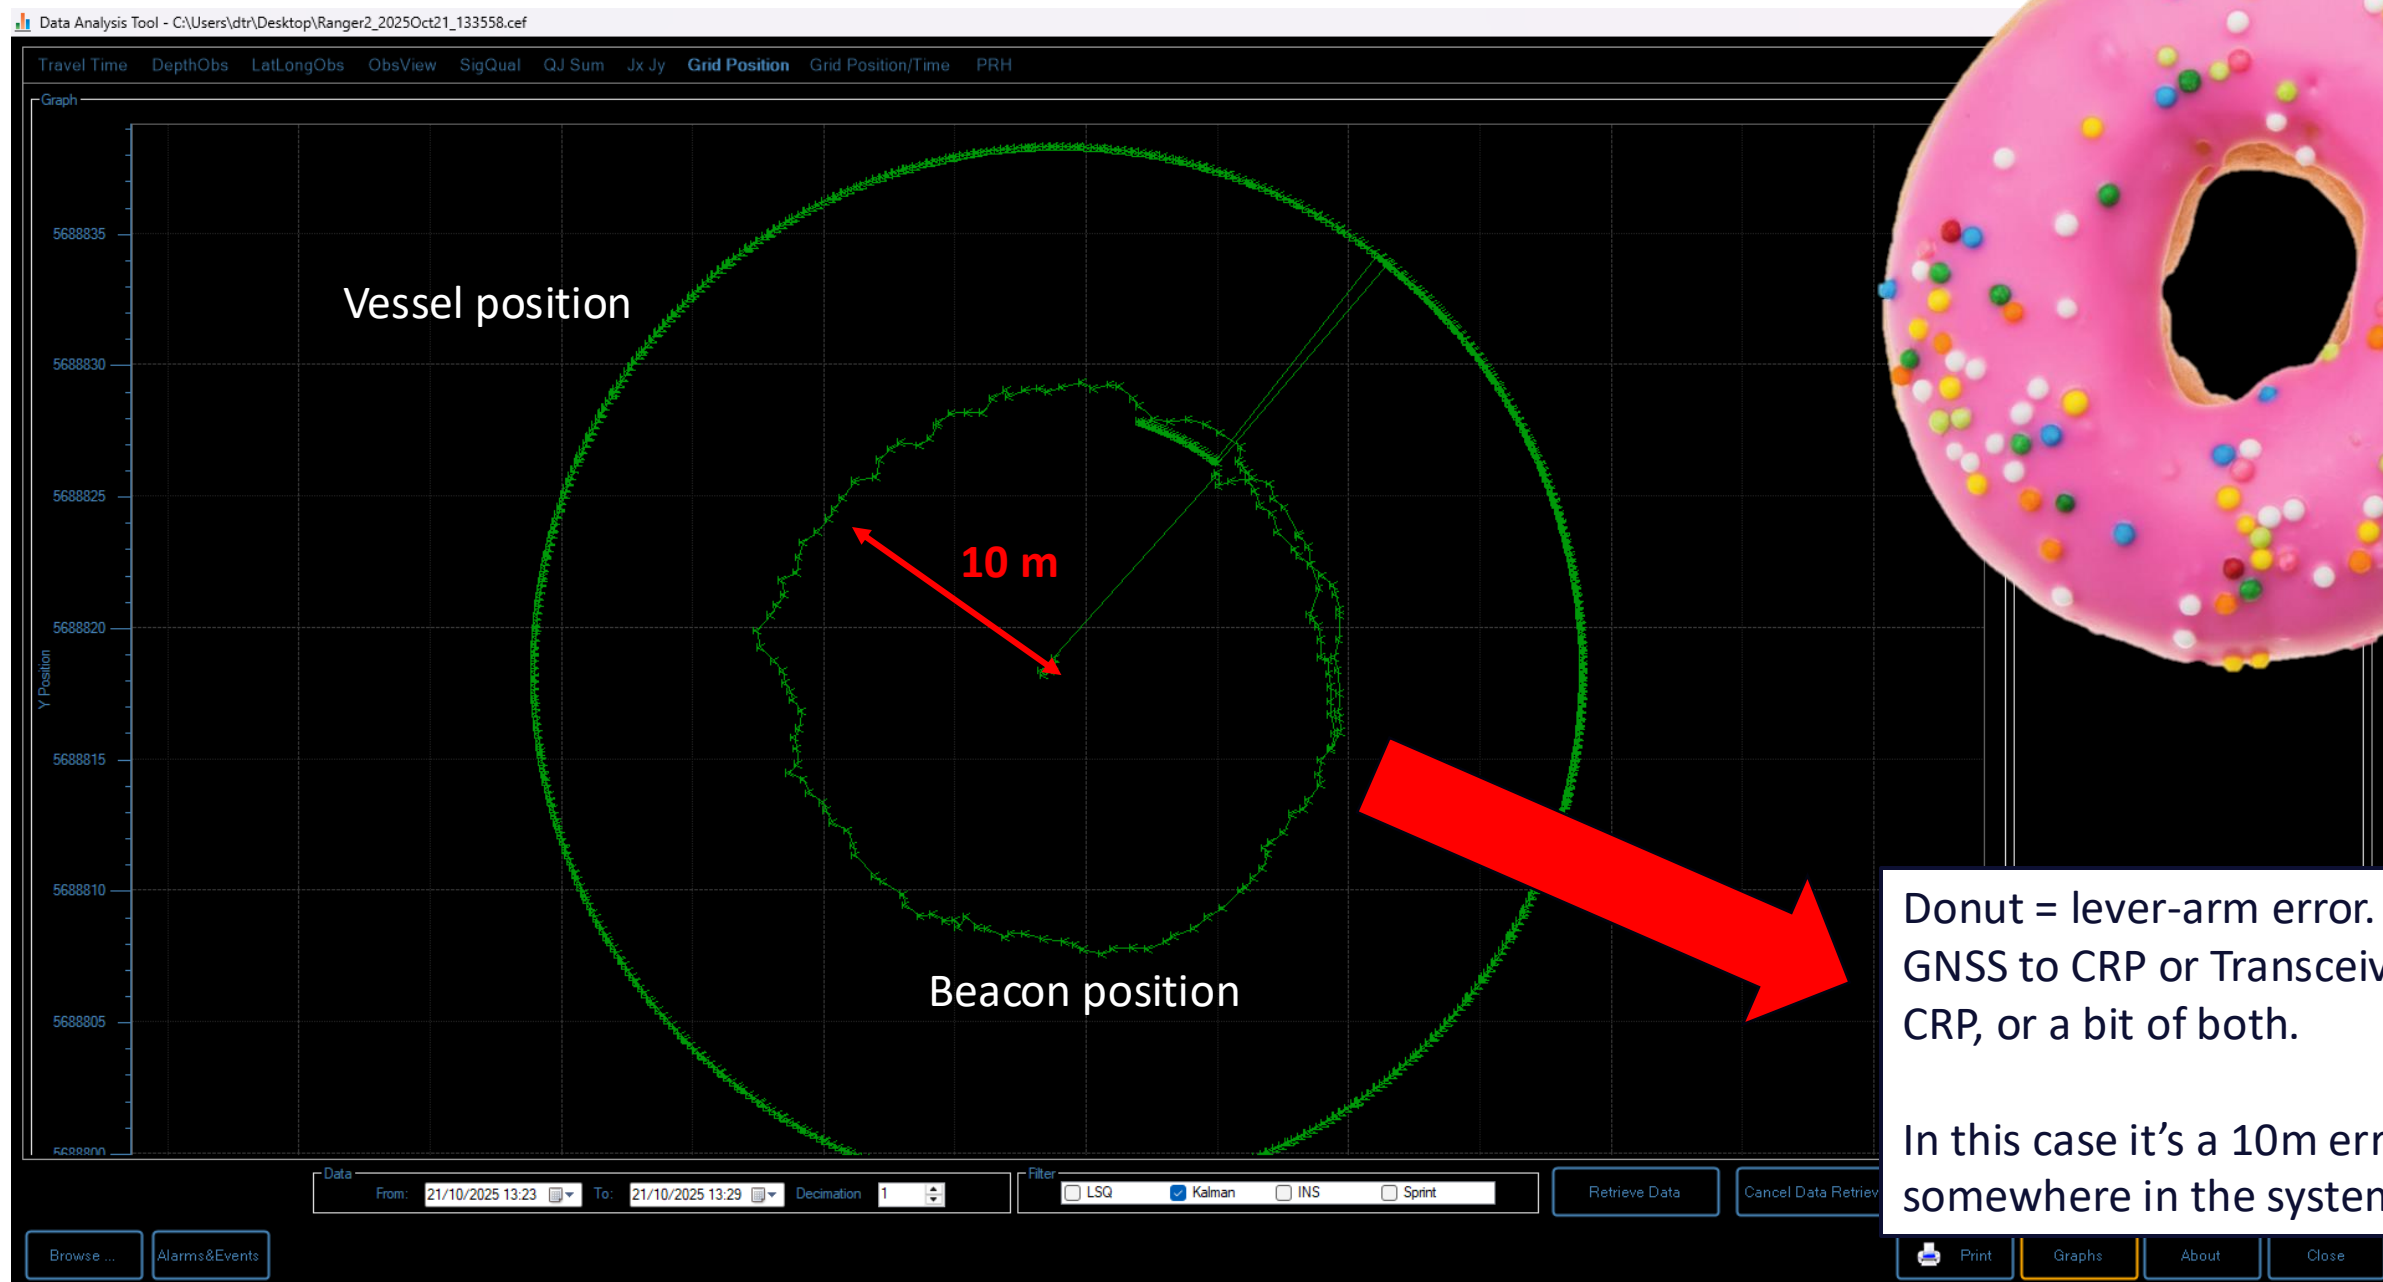

➤ Data Analysis Tool

➤ Data Analysis Tool

Travel Time	DepthObs	LatLongObs	ObsView	SlgQual	QJSum	Jx Jy	Grid Position	Grid Position/ Time	PRH
Time for signal to travel from the vessel to the beacon and back again (remember TAT)	Vessel depth (hopefully always 0m)	Vessel Latitude and Longitude vs Time	Error checks for any interfaces into the system	Signal quality	The lower the better – how well the signal matches a stored version of the signal	Acoustic signal detection on the Transceiver	Beacon and vessel position and depth	Beacon and position vs time and depth	Pitch, roll and heading

➤ Data Analysis Tool - Spin Test

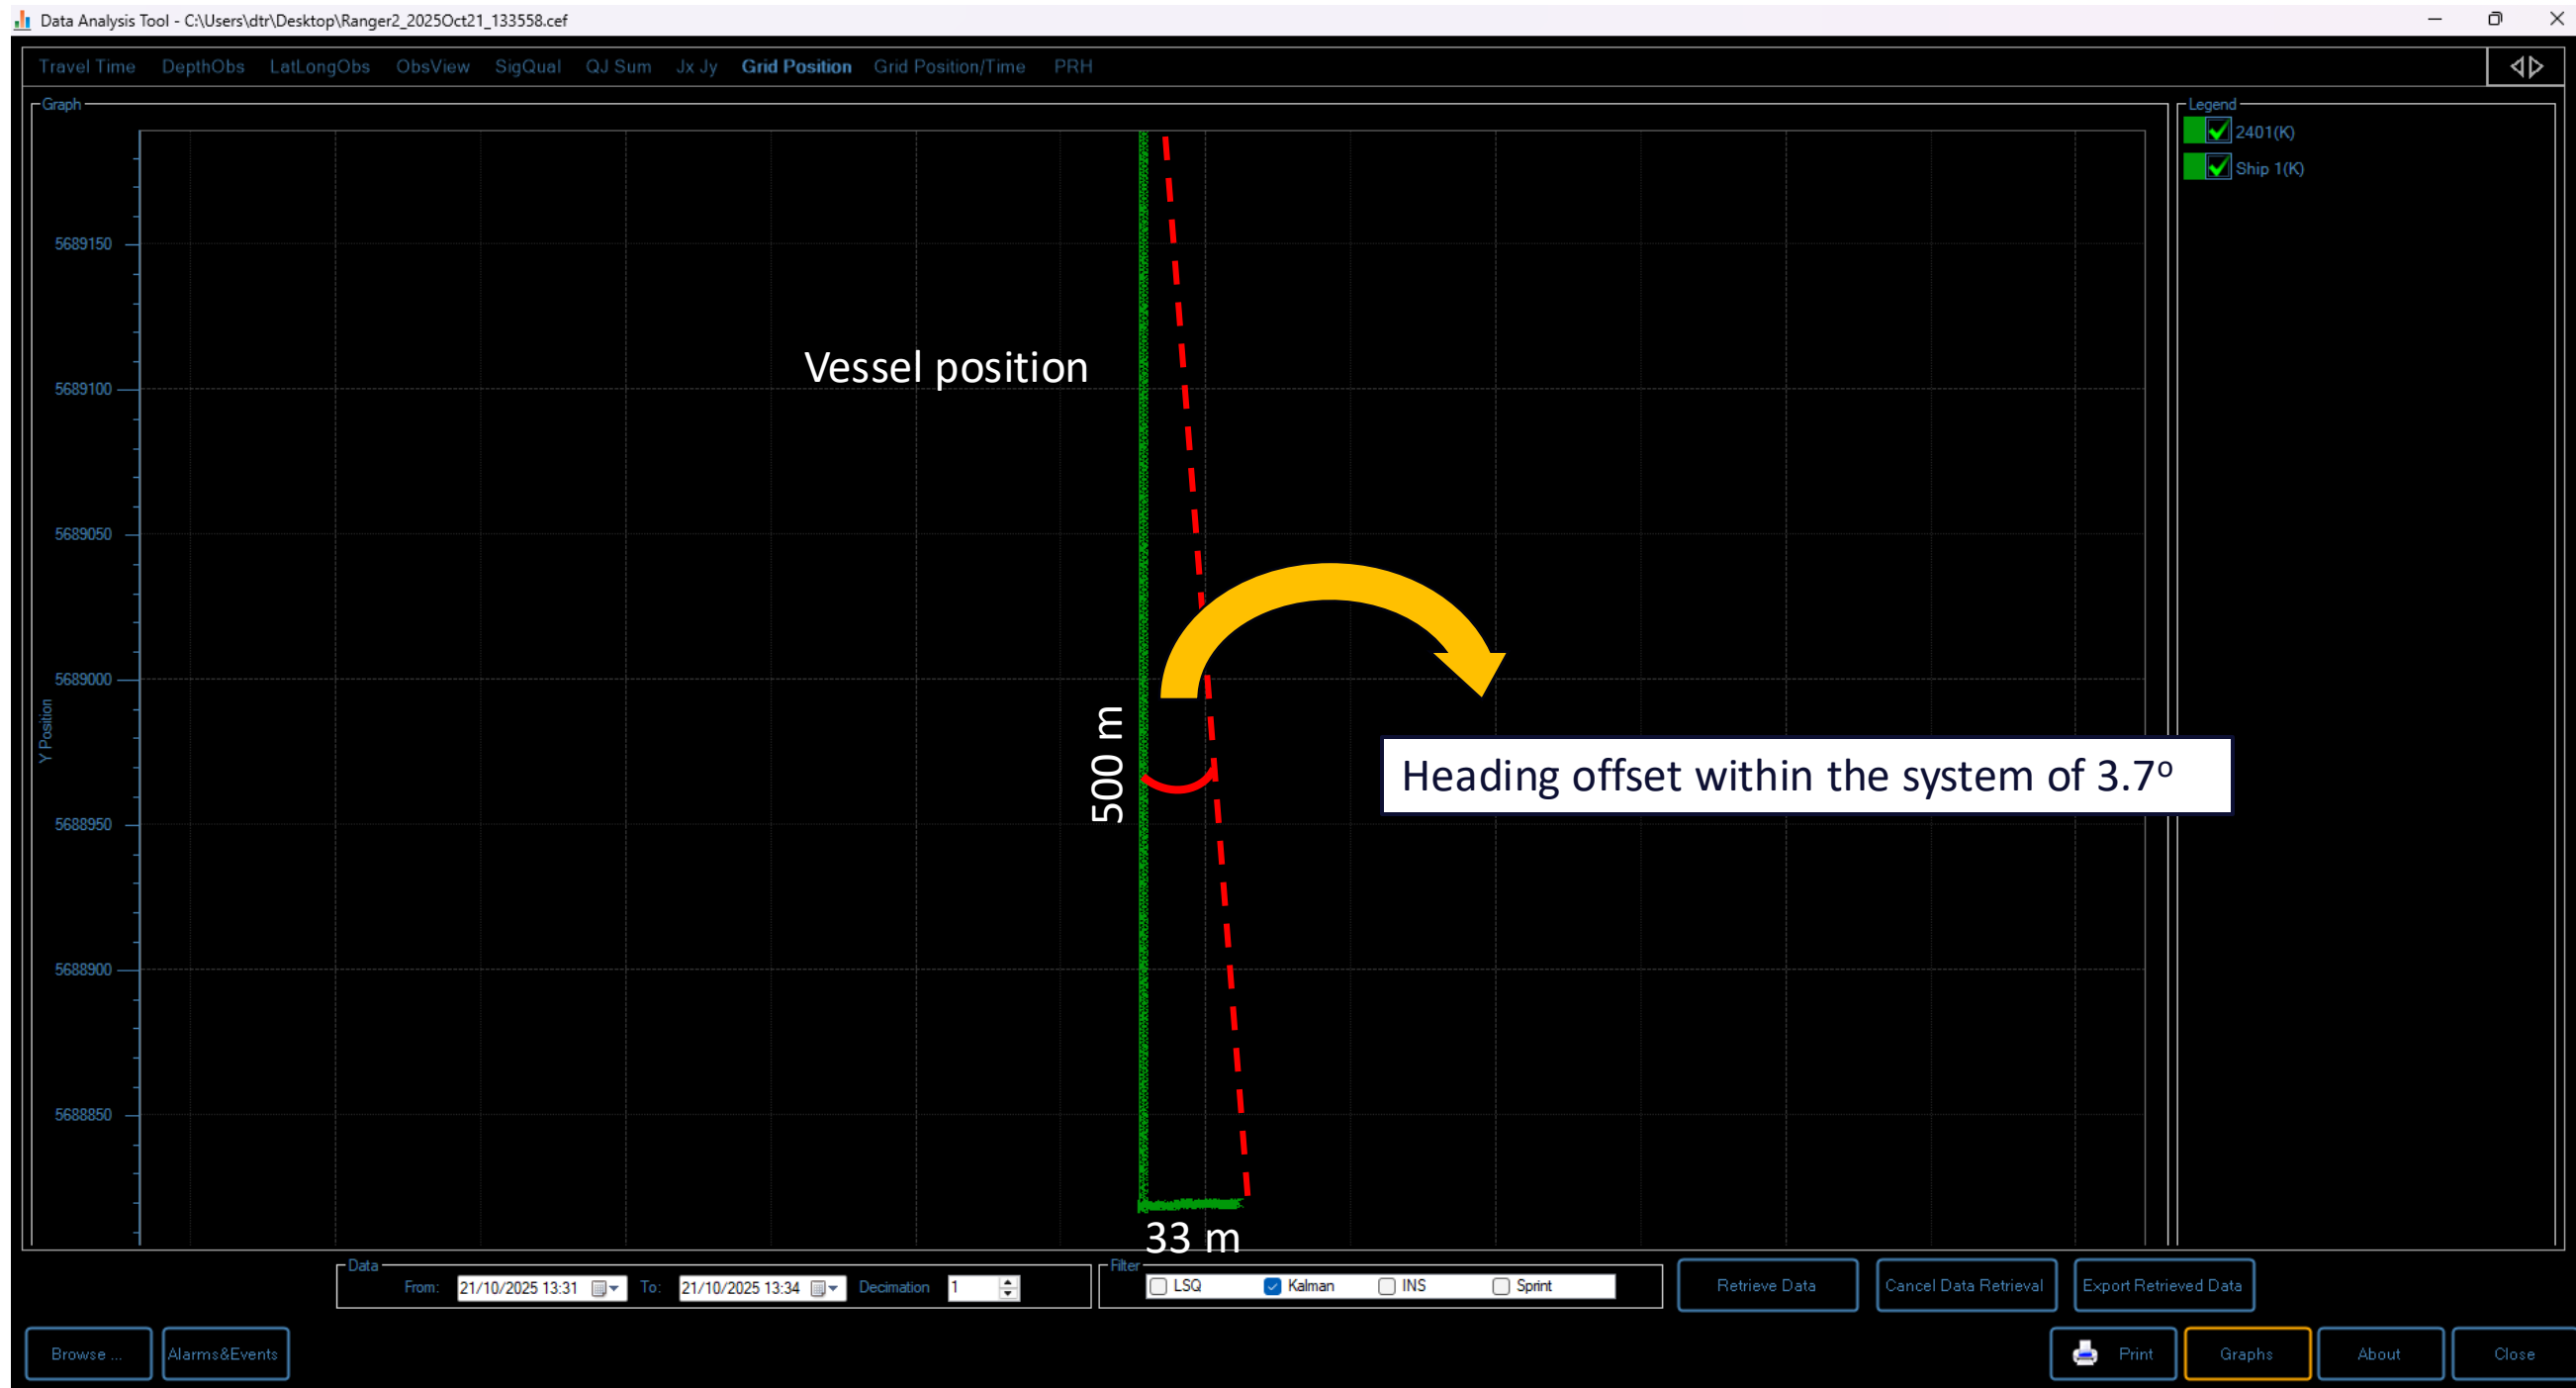

Donut = lever-arm error. Likely GNSS to CRP or Transceiver to CRP, or a bit of both.

In this case it's a 10m error somewhere in the system

➤ Data Analysis Tool – Sail Away Test

➤ Data Analysis Tool – Sail Away Test

➤ Conclusion

Use the right system for the job

Correct installation

Train and maintain

Fine tune using inbuilt system tools

DAT for offline processing
