

Upper mantle structure from long-offset studies

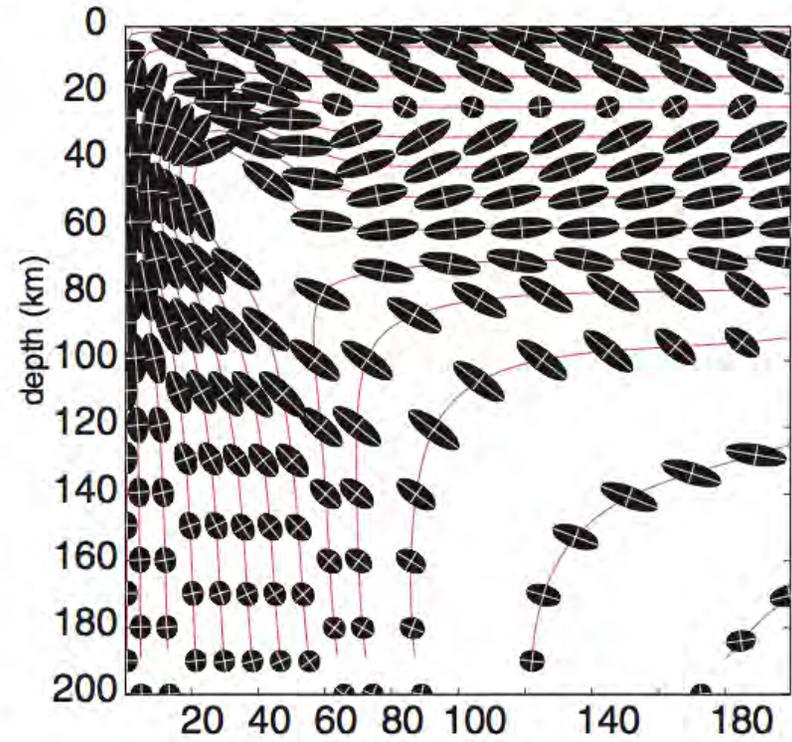

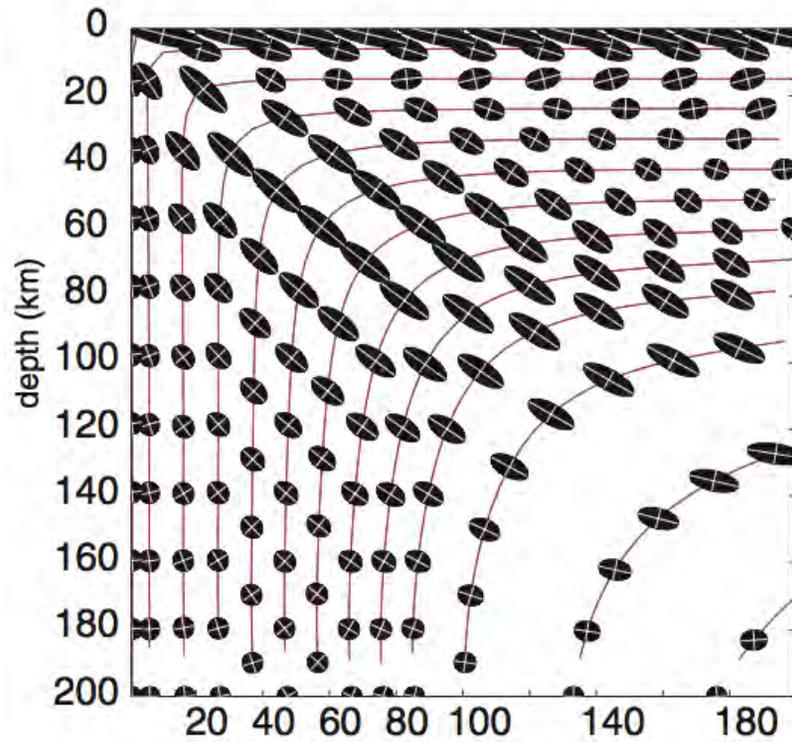

Structure related to melting and melt extraction

F , mean extent of melting,
 P , mean pressure of melting,
 h_c , crustal thickness, and
 F_{max} , maximum amount of melting.

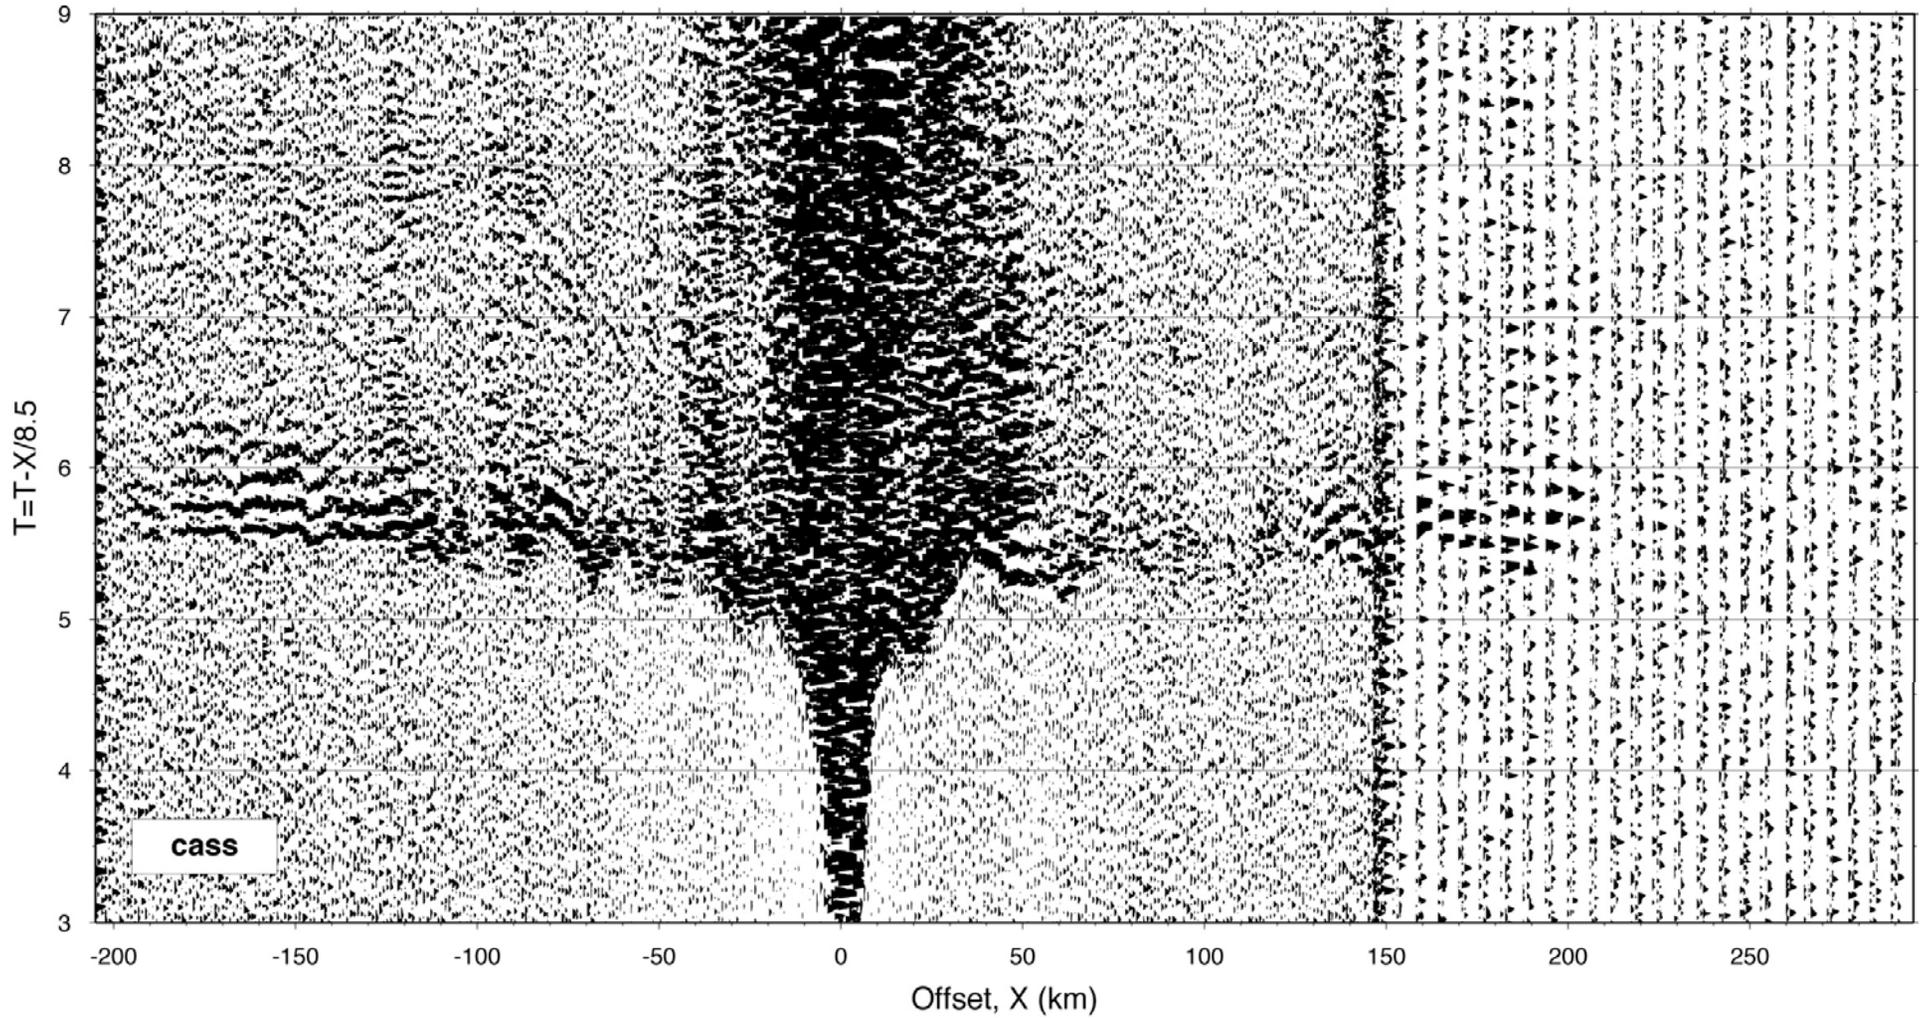

(Langmuir, Klein, & Plank, 1993)

Structure related to strain history

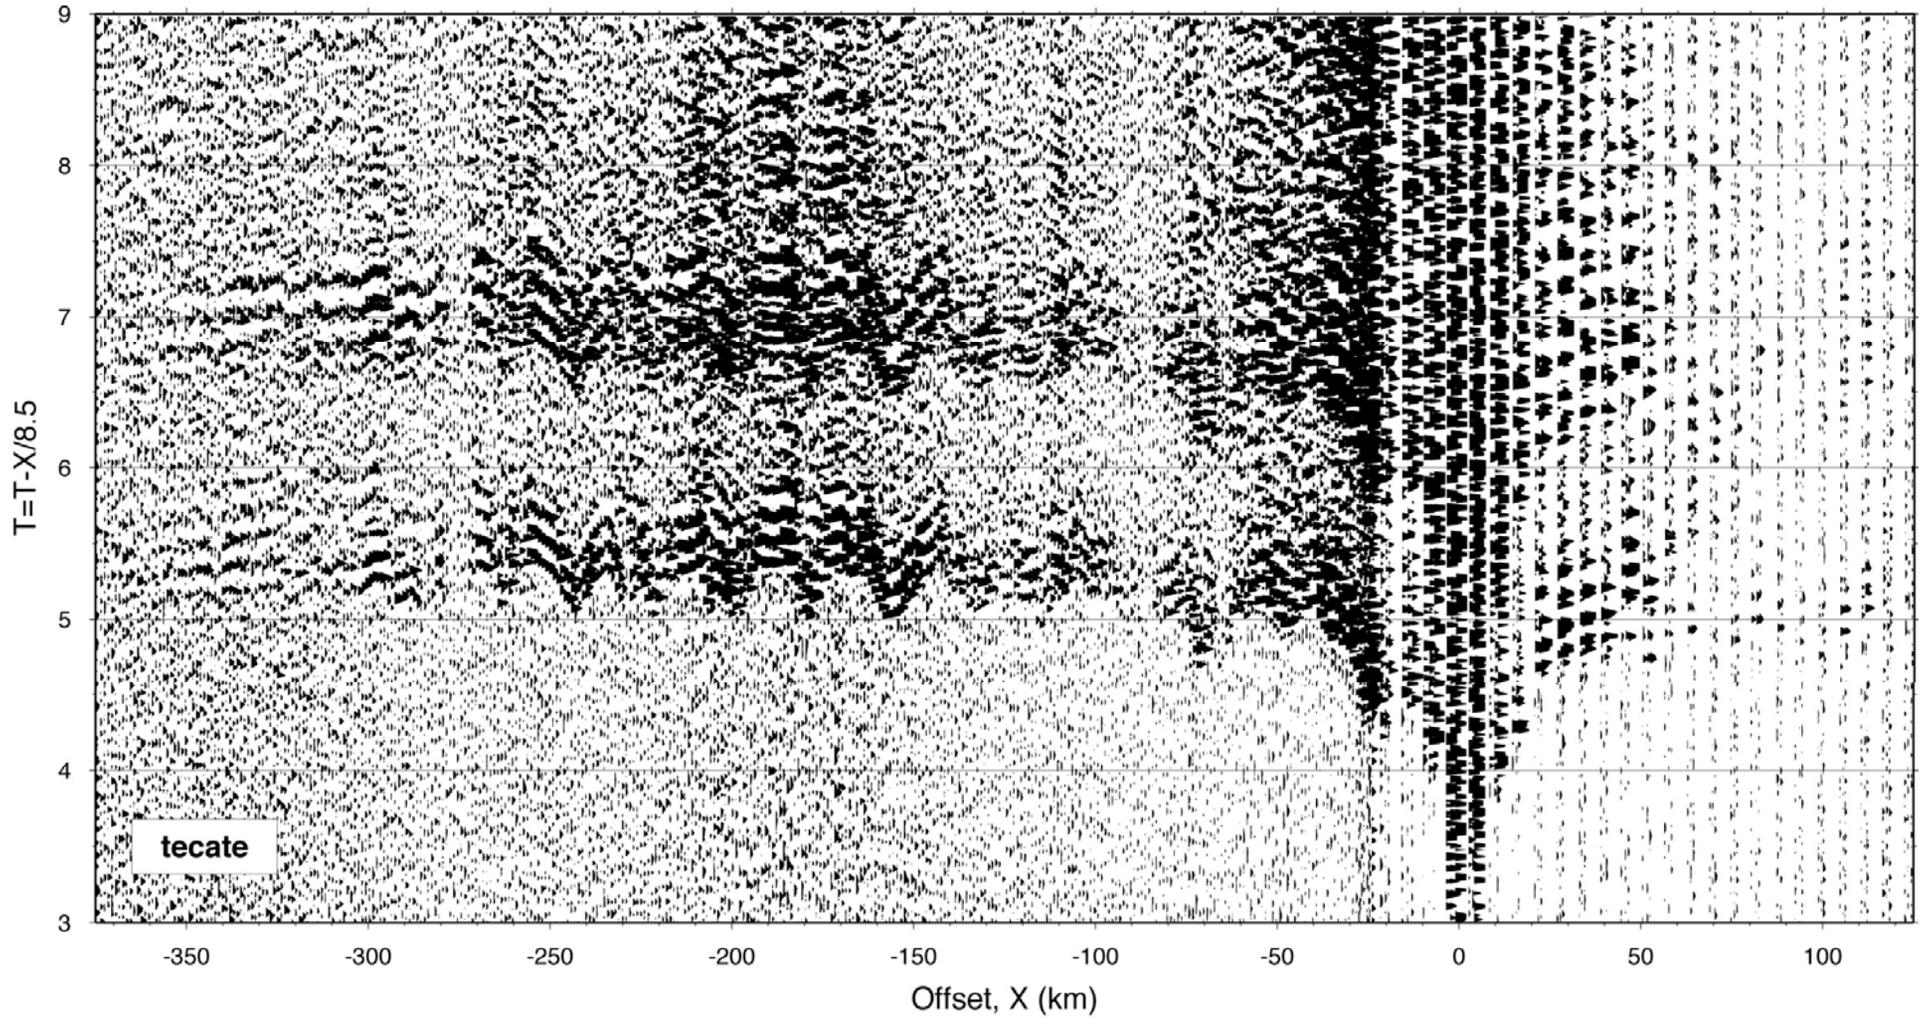

(Blackman and Kendall, 2002)

Pacific Upper mantle anisotropy

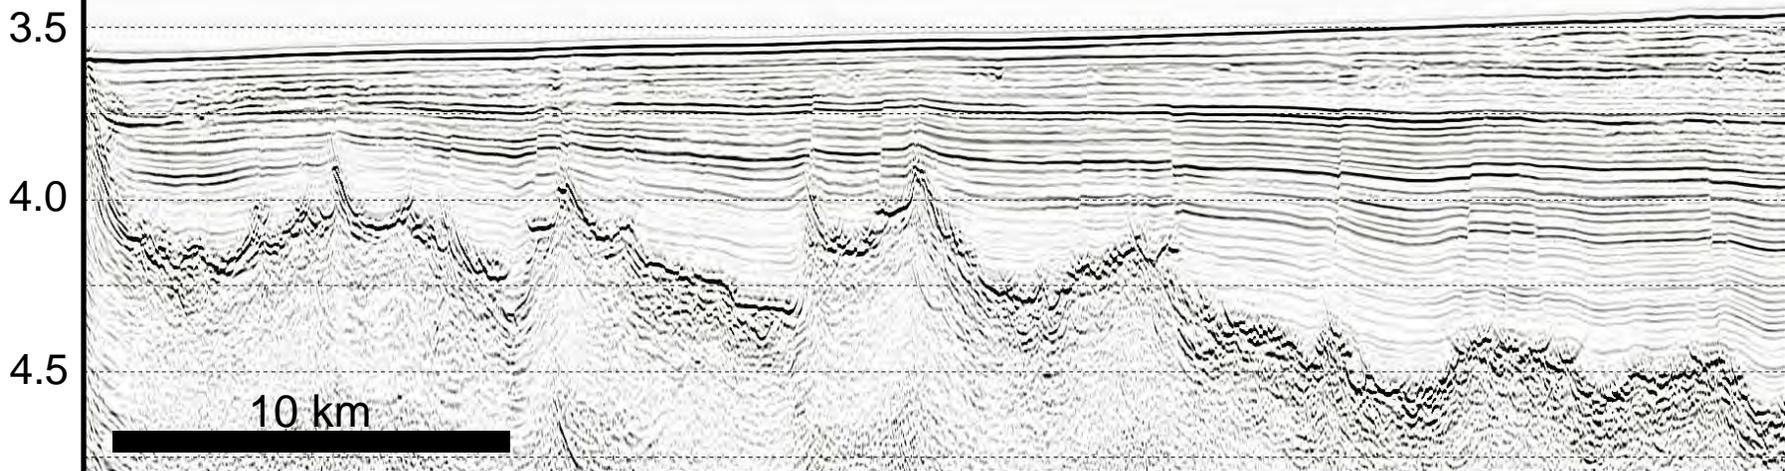

Bending-fault-influenced anisotropy

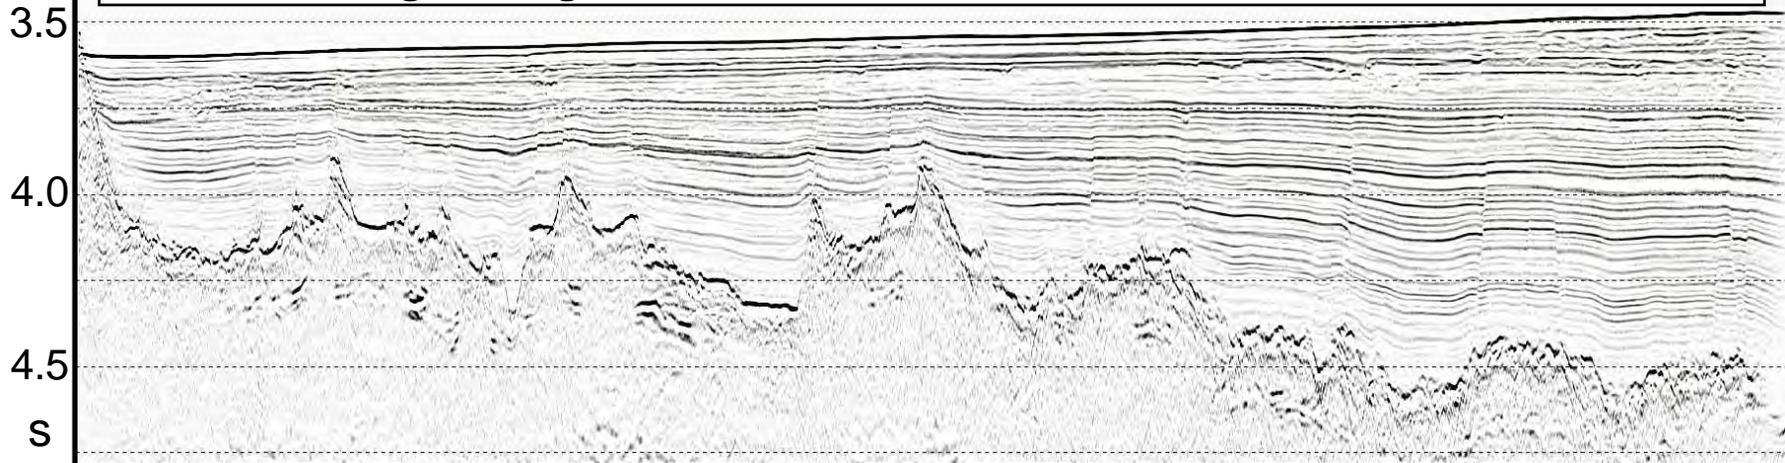

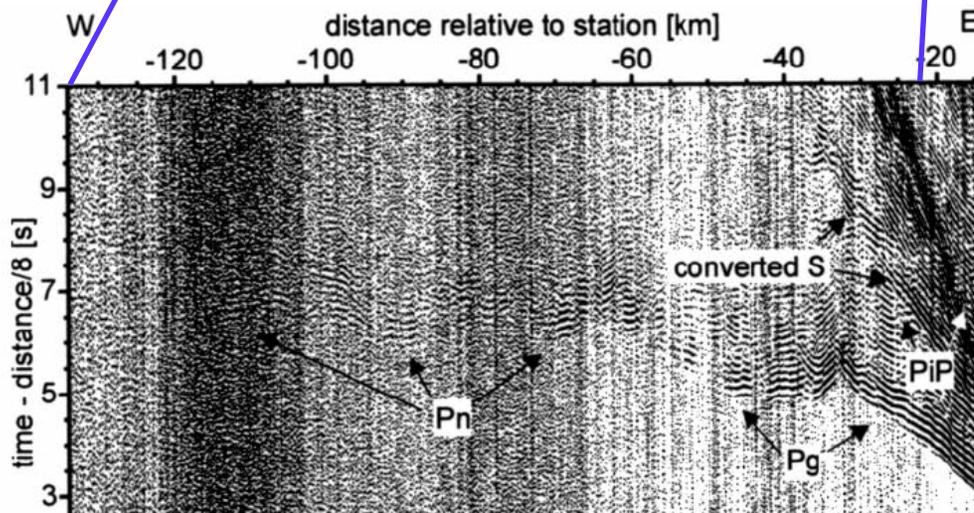

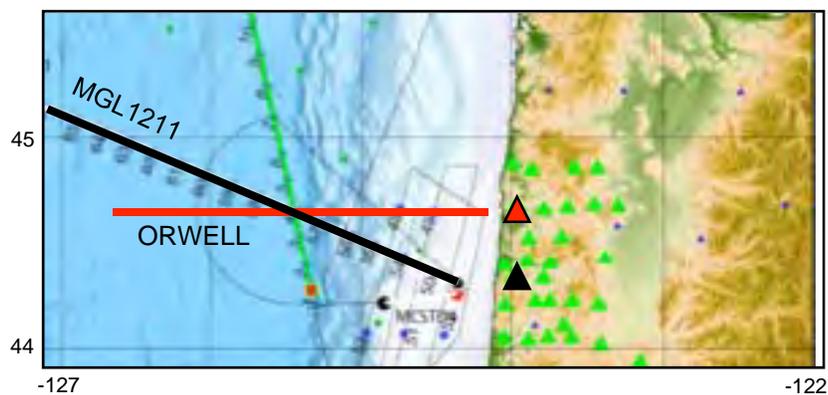

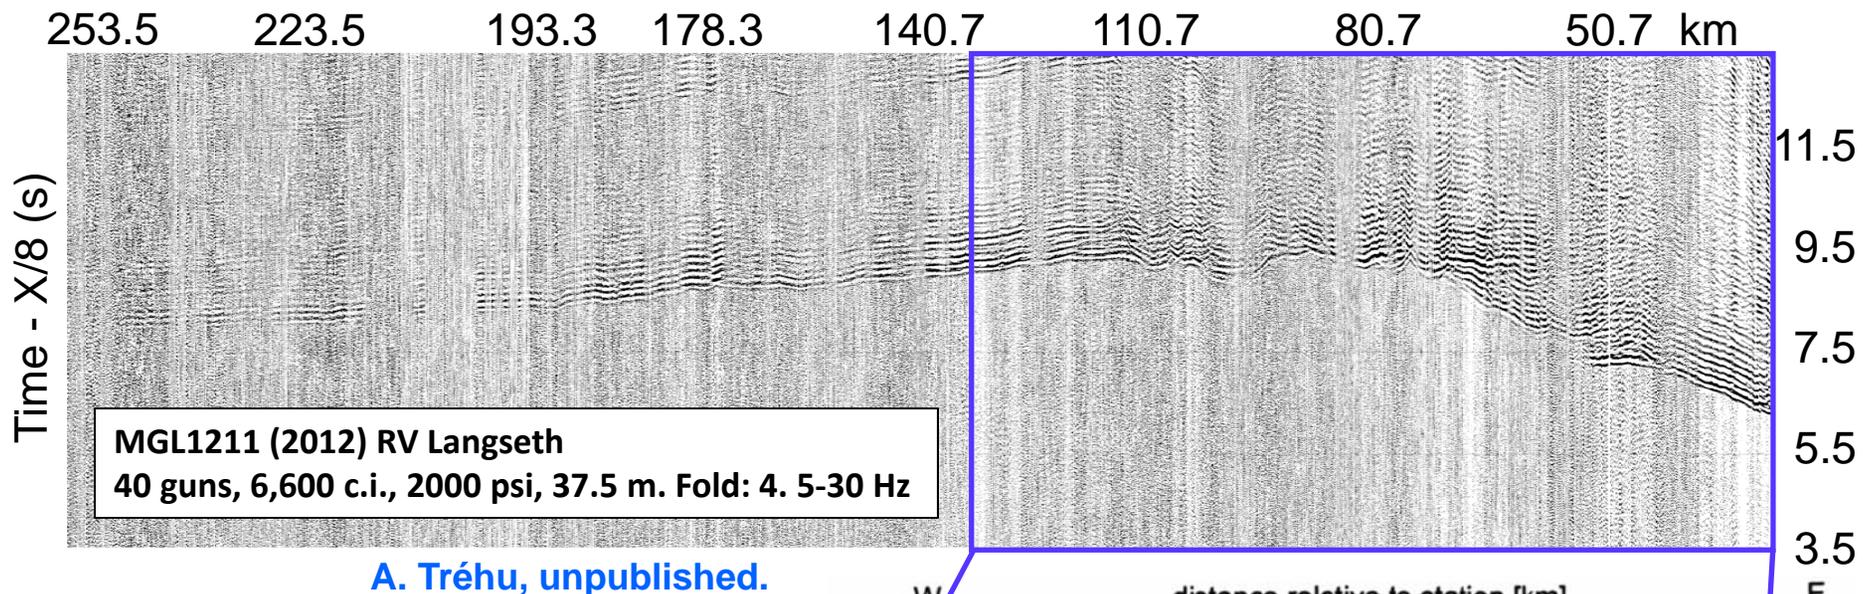

2012 RV Langseth 40 guns, 6,600 c.i., 2000 psi, 37.5 m. 636 channels. Fold: 105

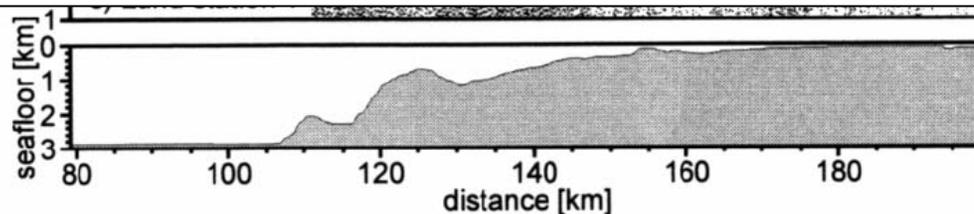

2001 RV Ewing 10 guns, 3,005 c.i. 37.5 m. 480 channels. Fold: 80

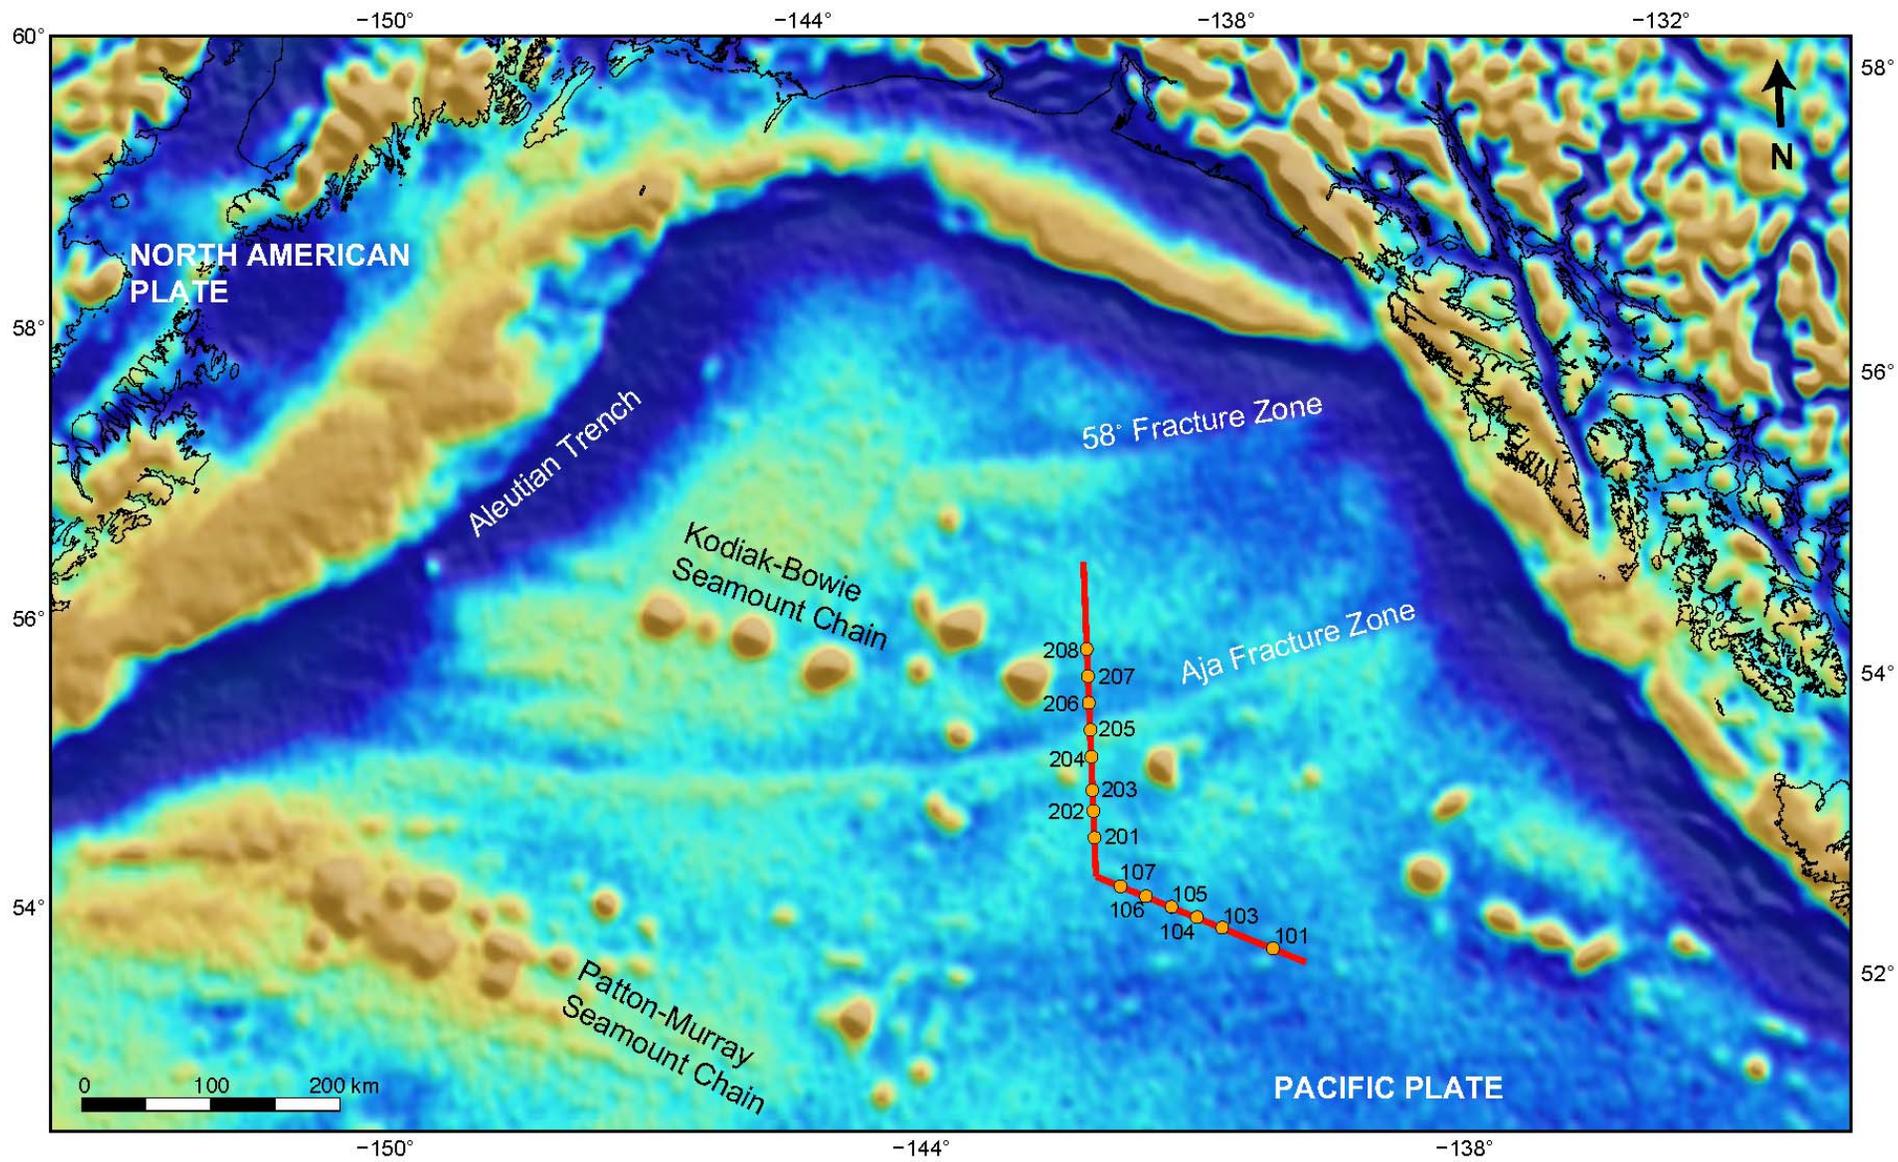

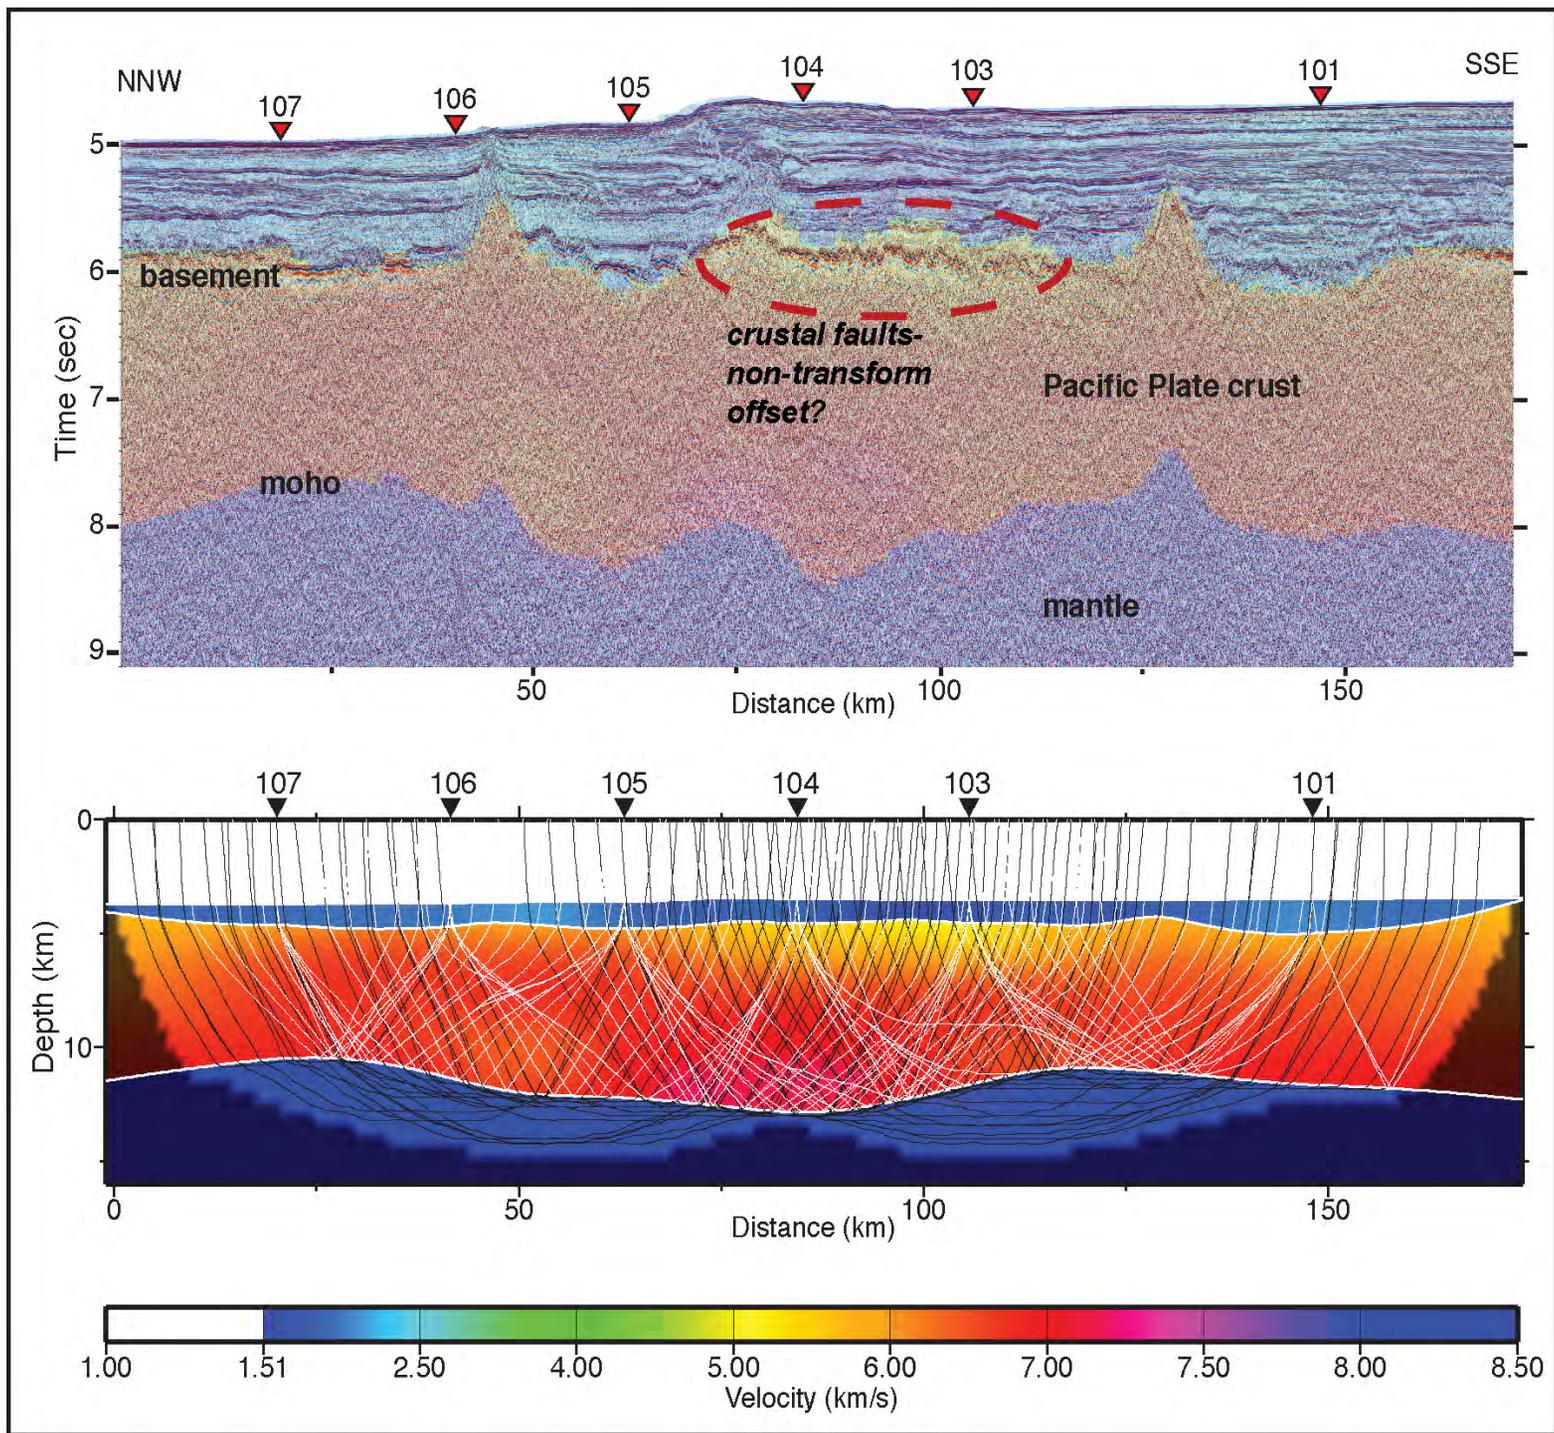

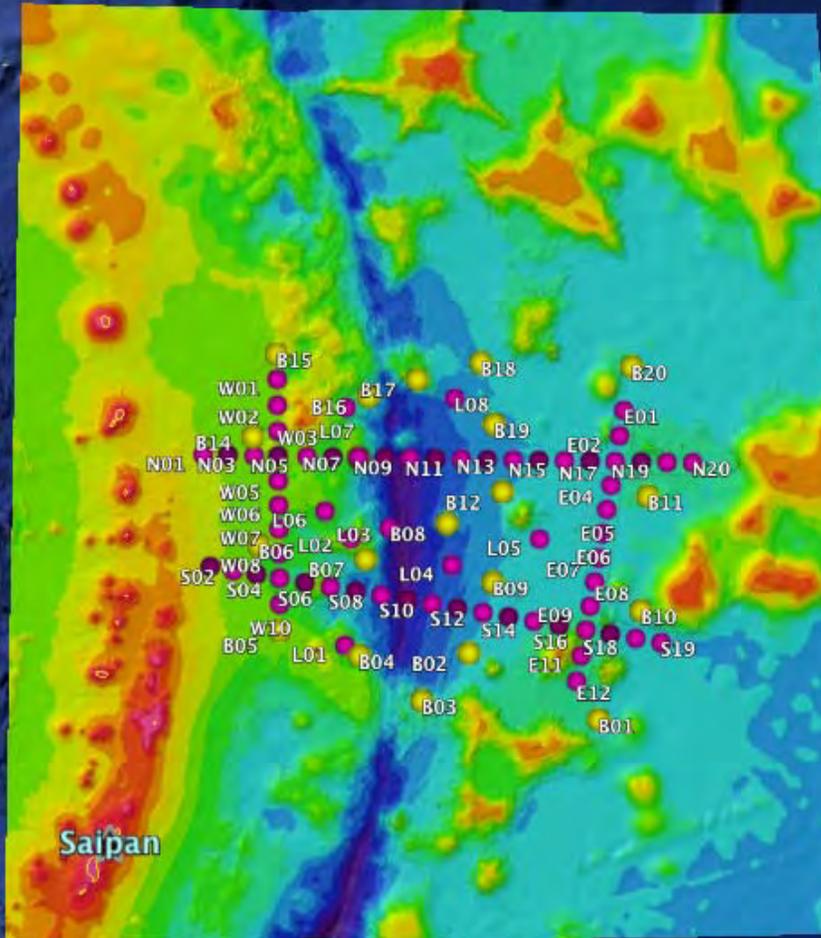

ORWELL (1996) RV Sonne. 16 guns, 6,350 c.i., ~140 m?. Fold: 1. 2-6-16-24 Hz

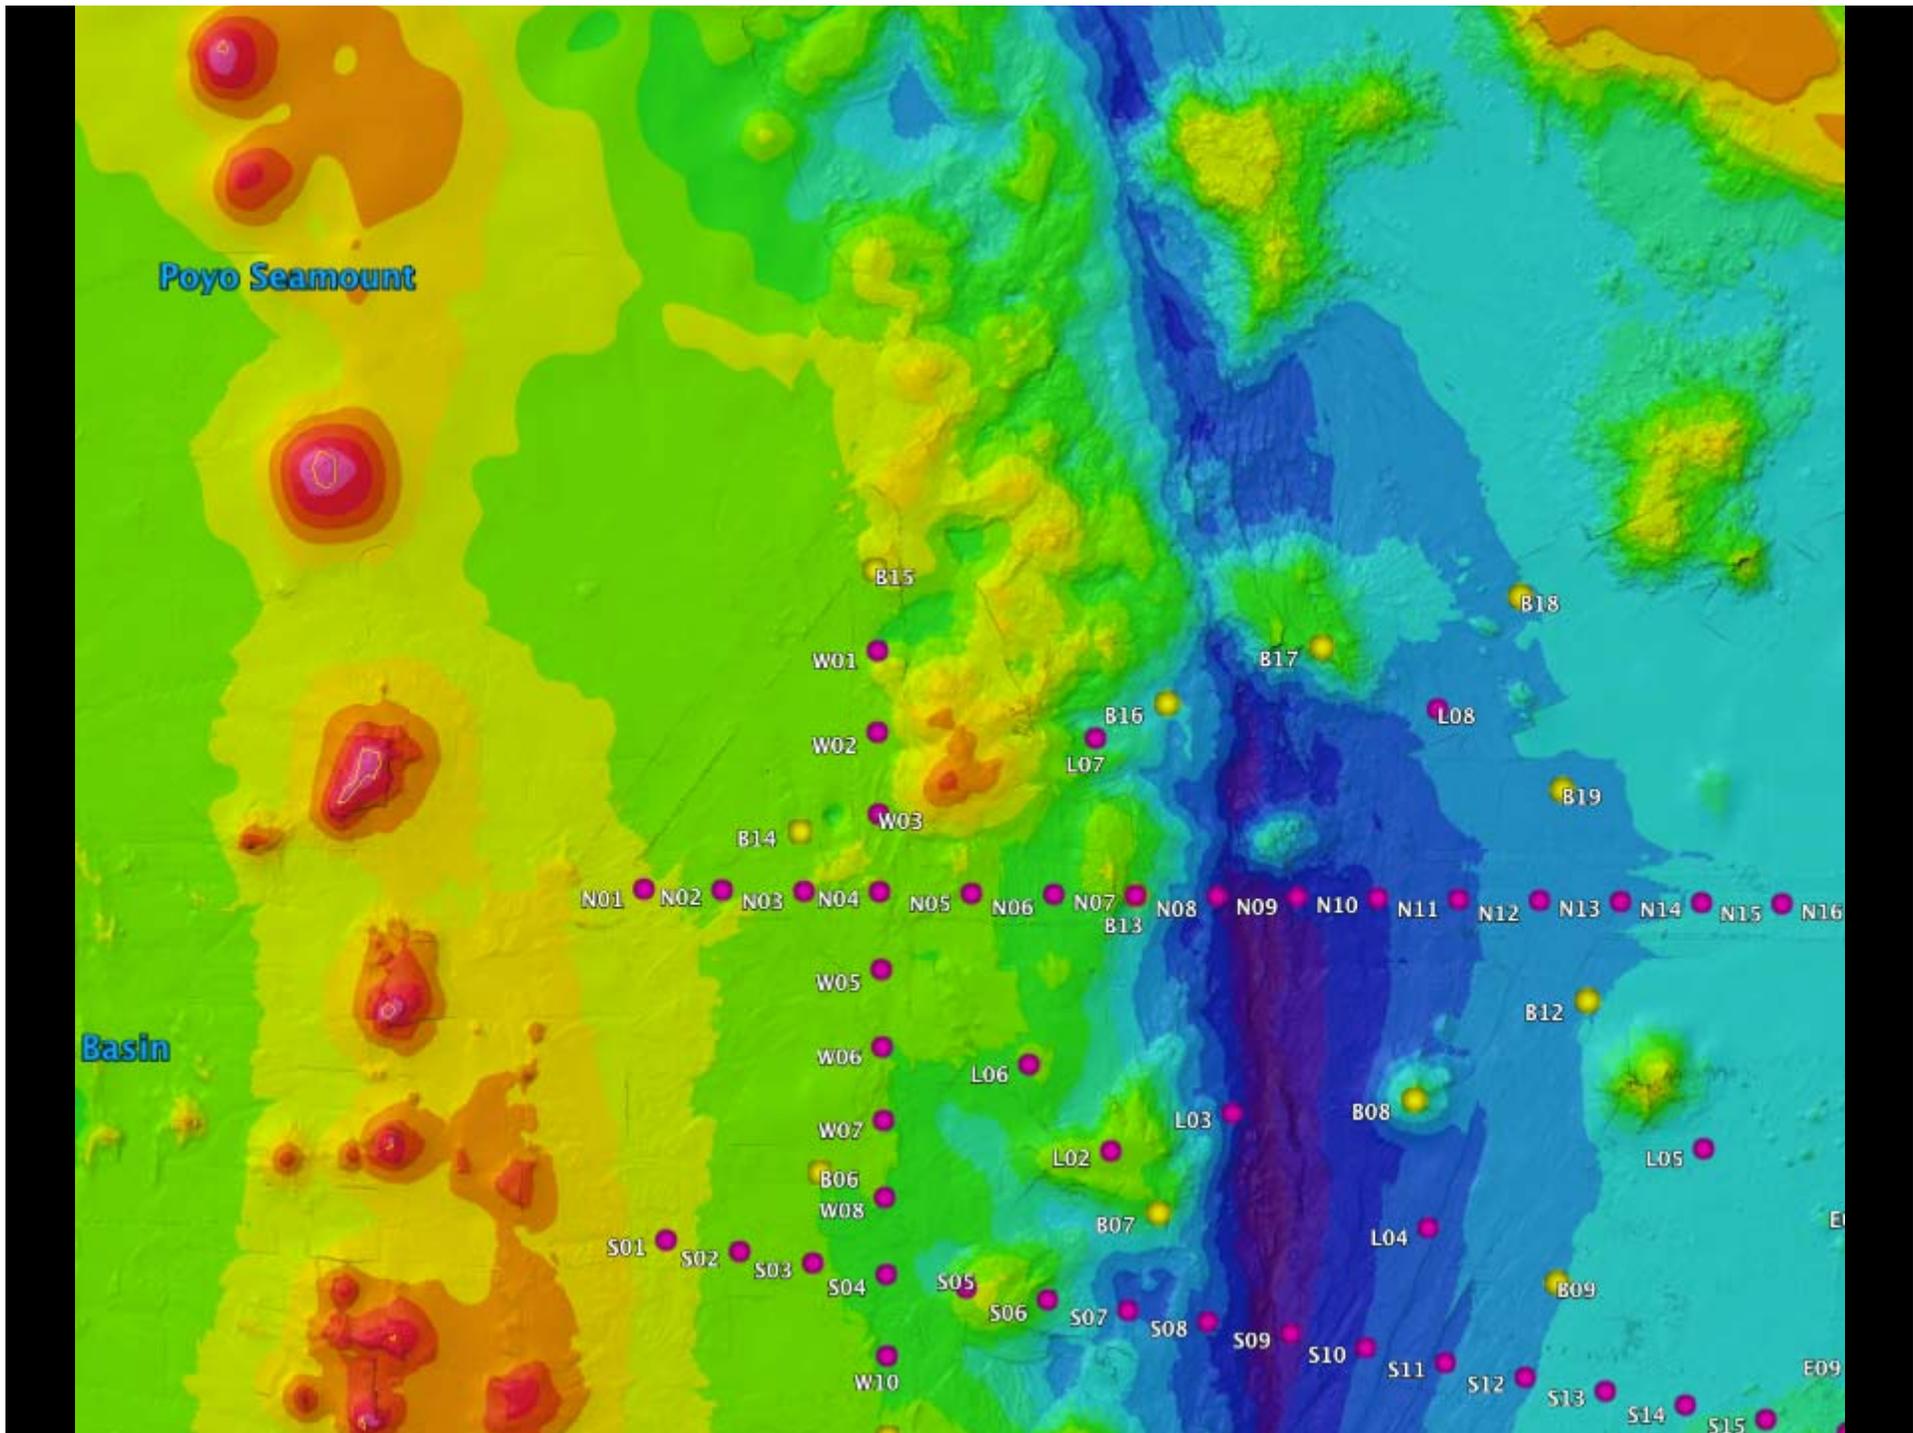

Gedom et al., 2000

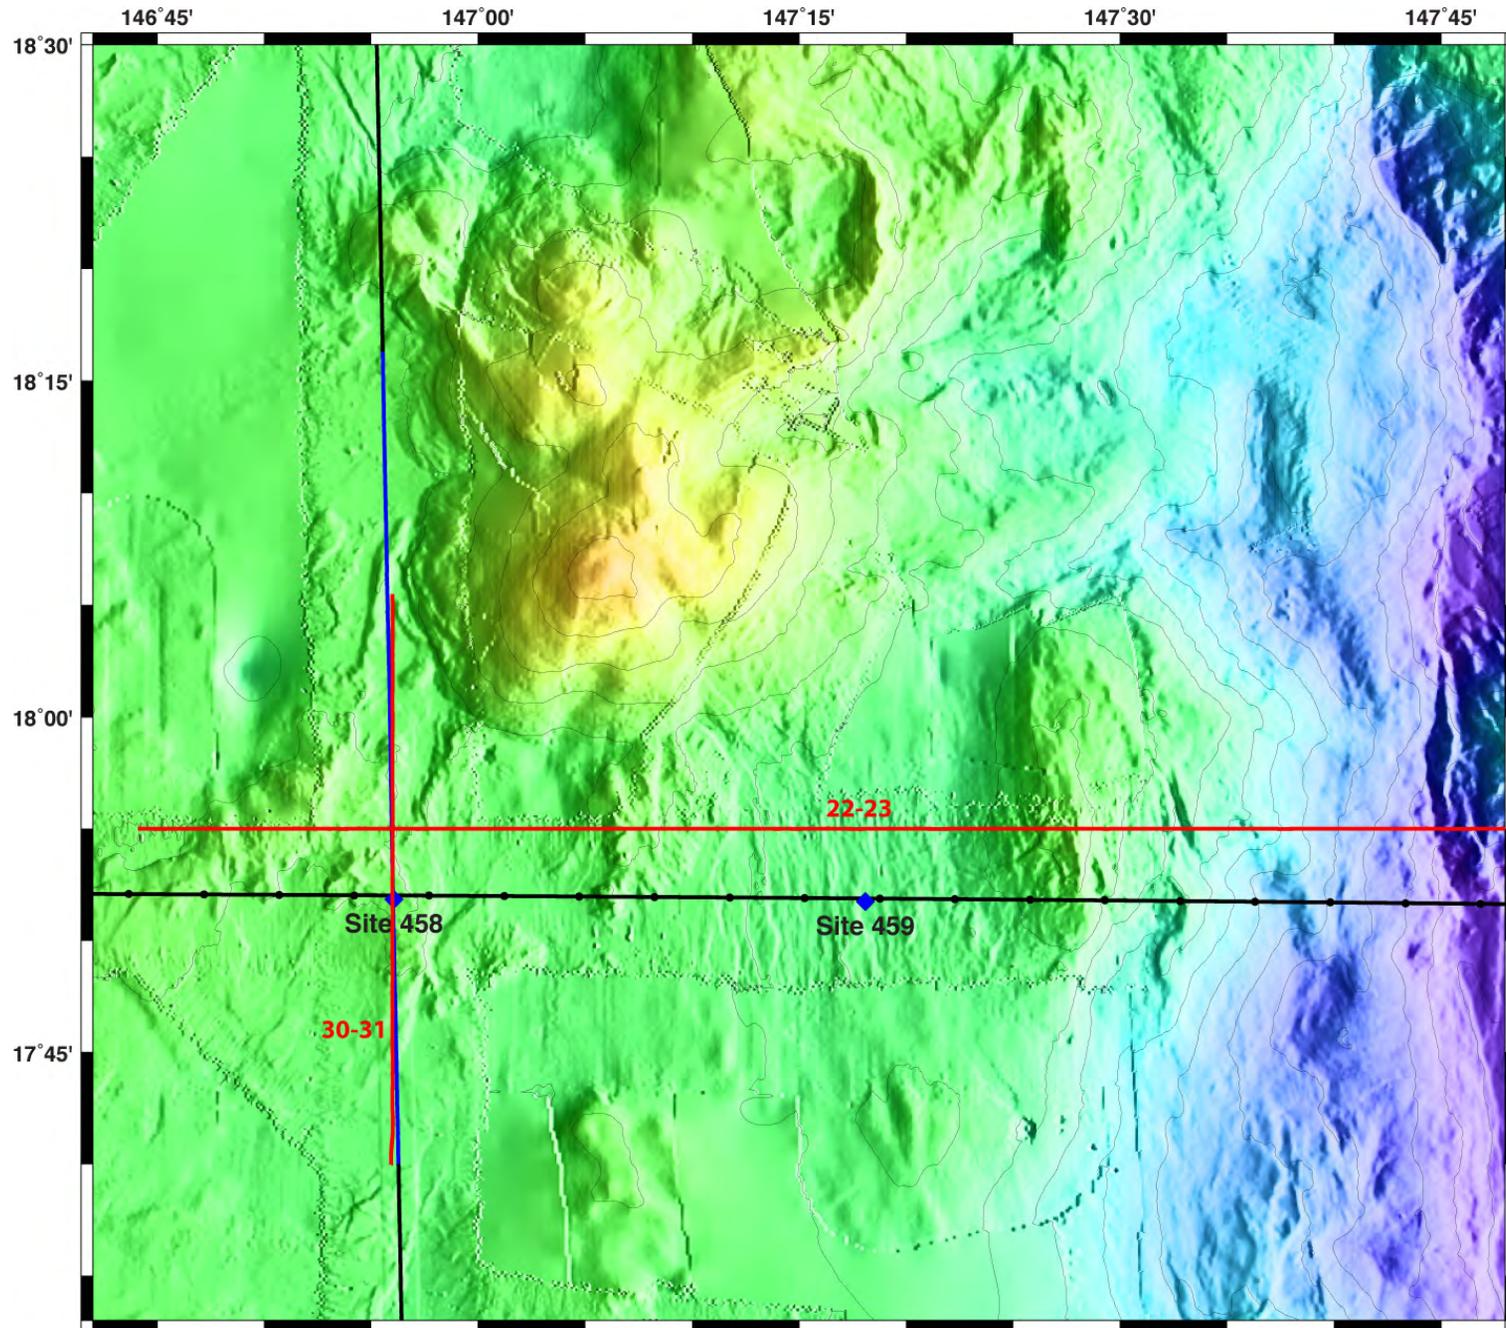

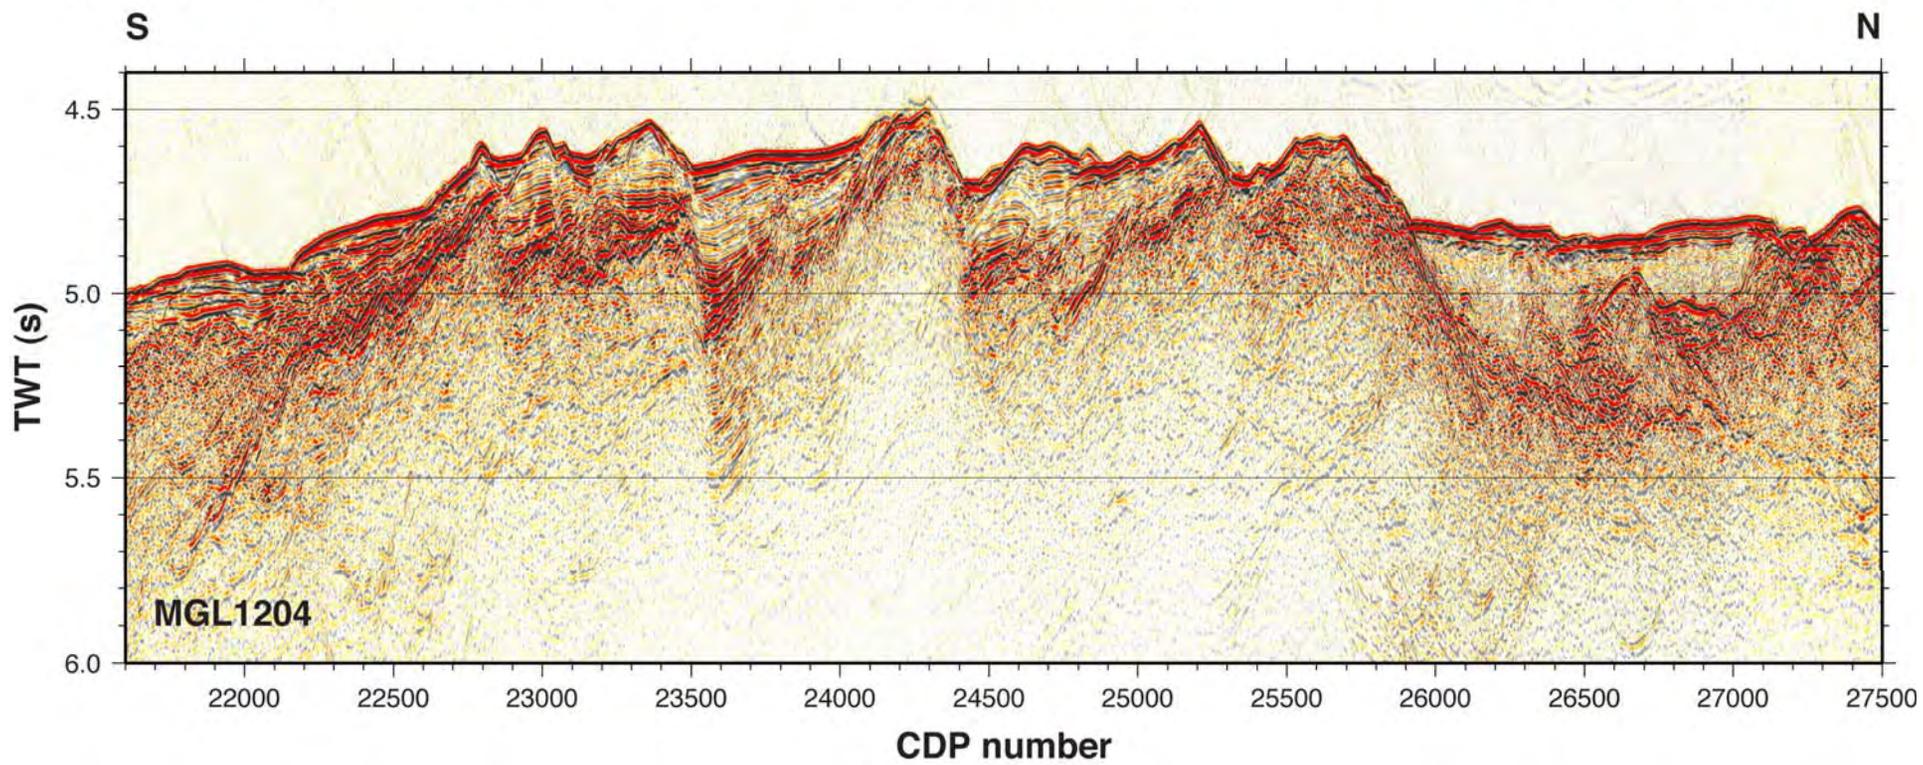

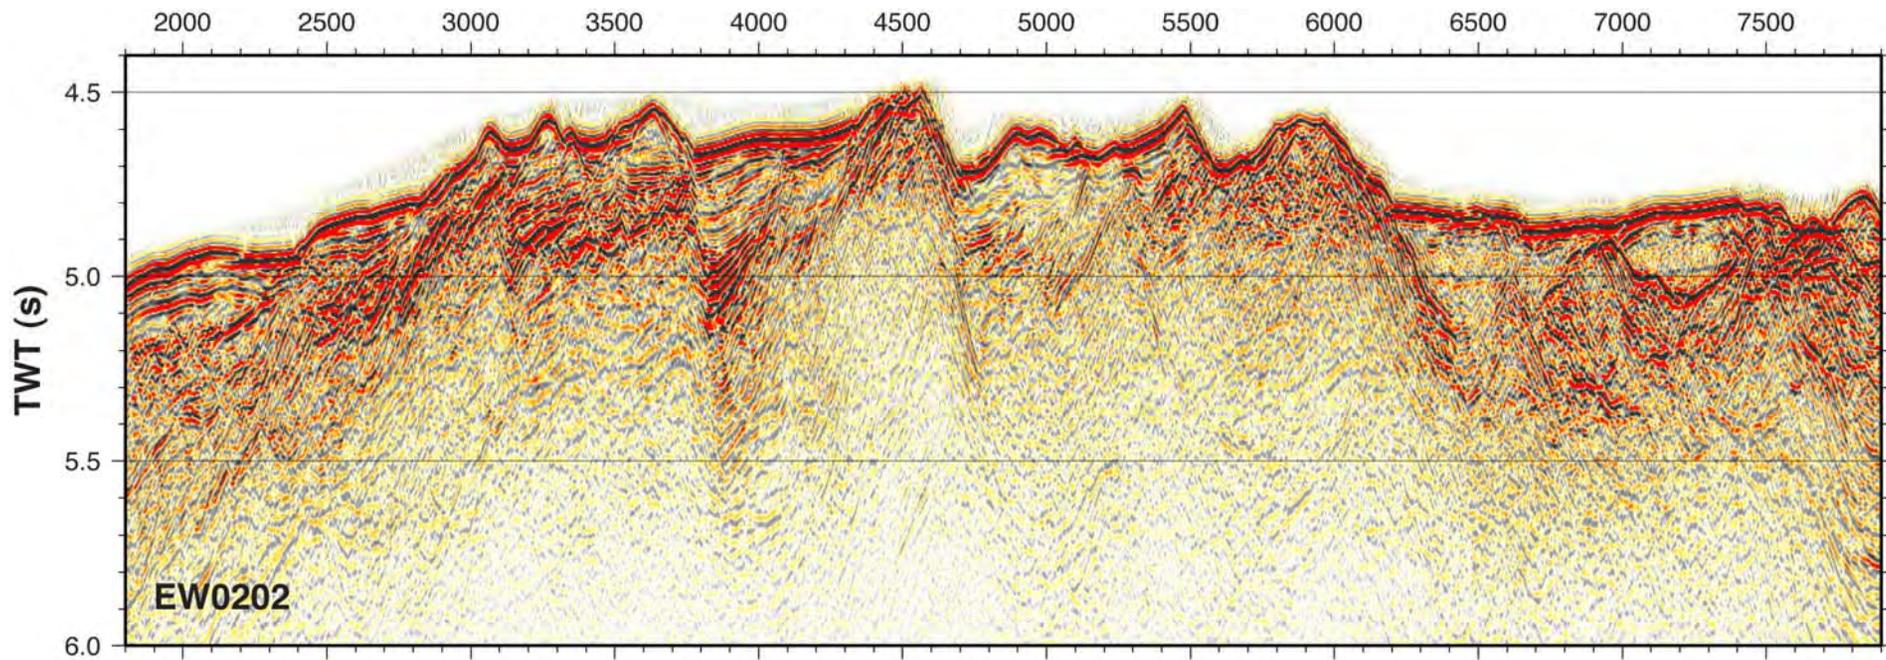

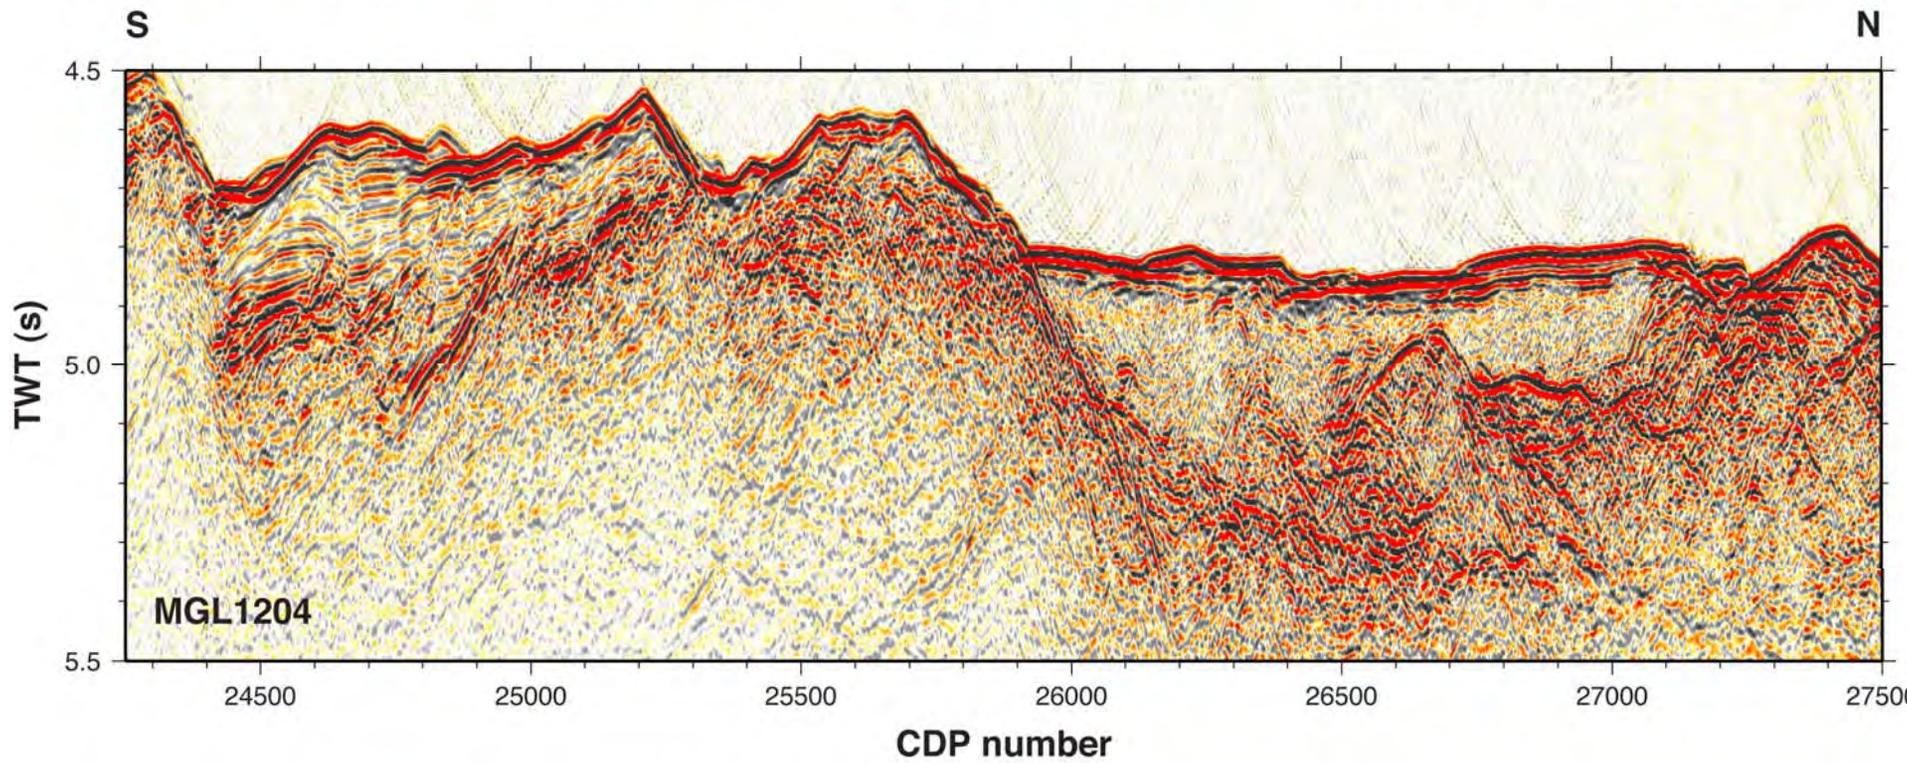

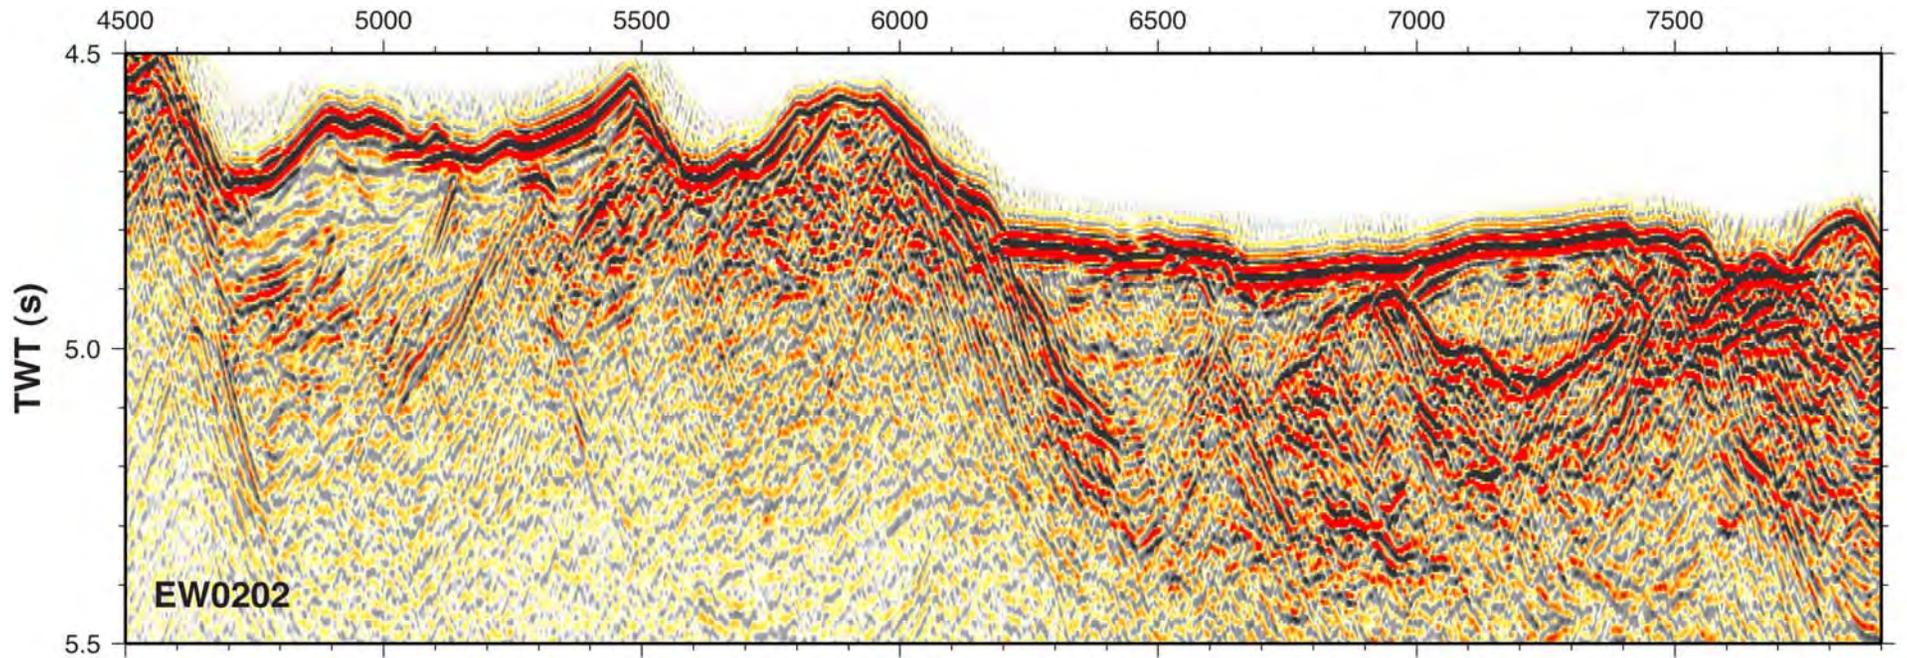

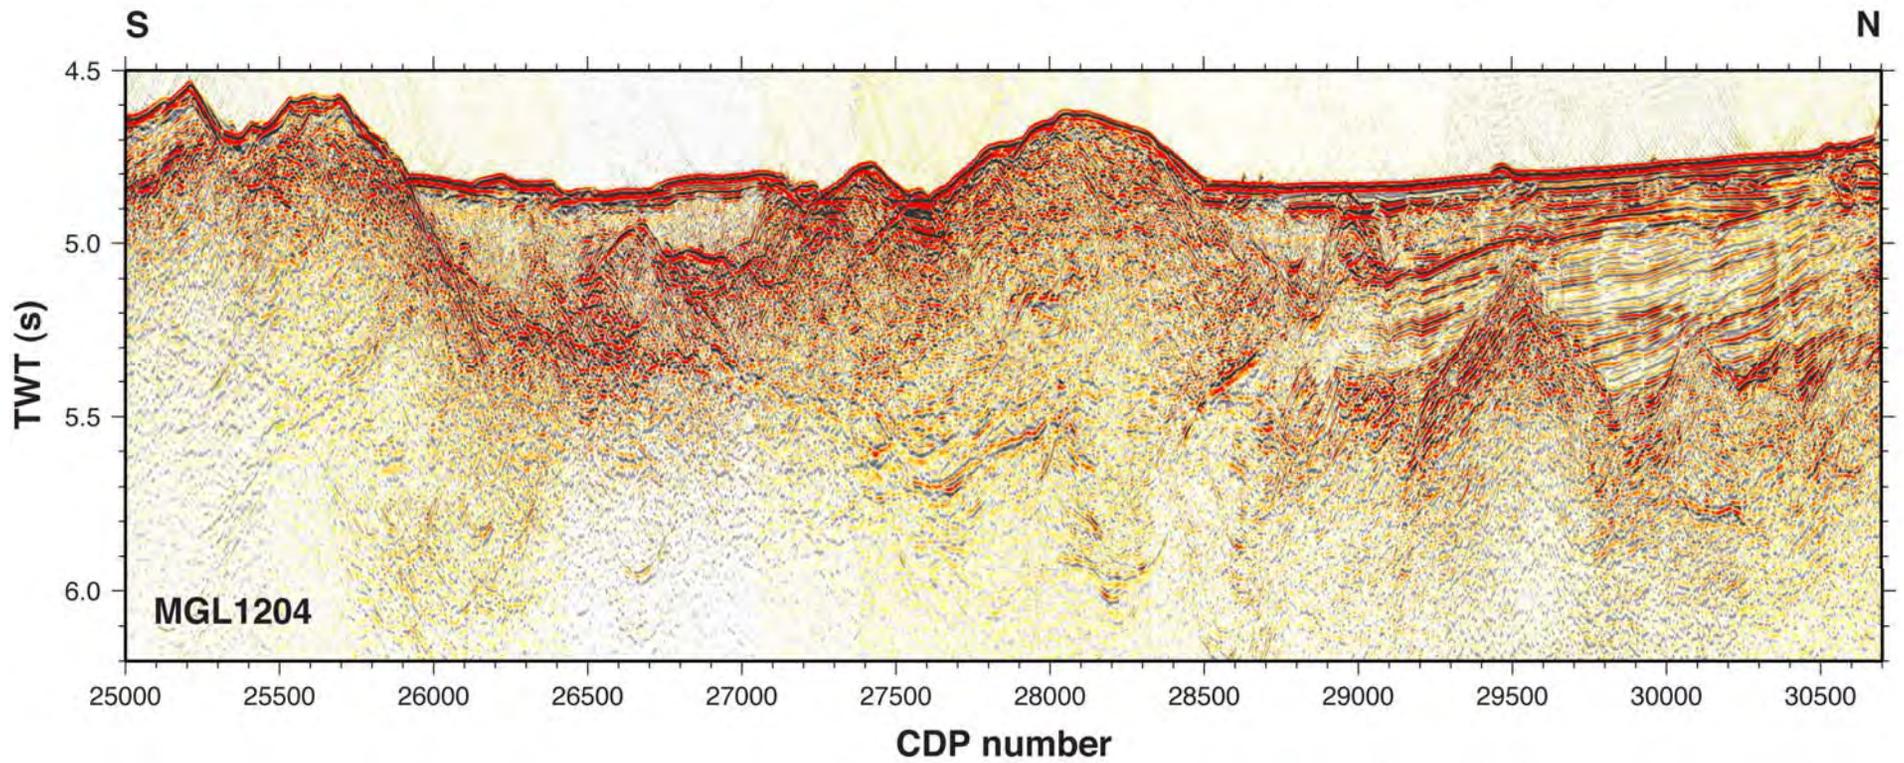

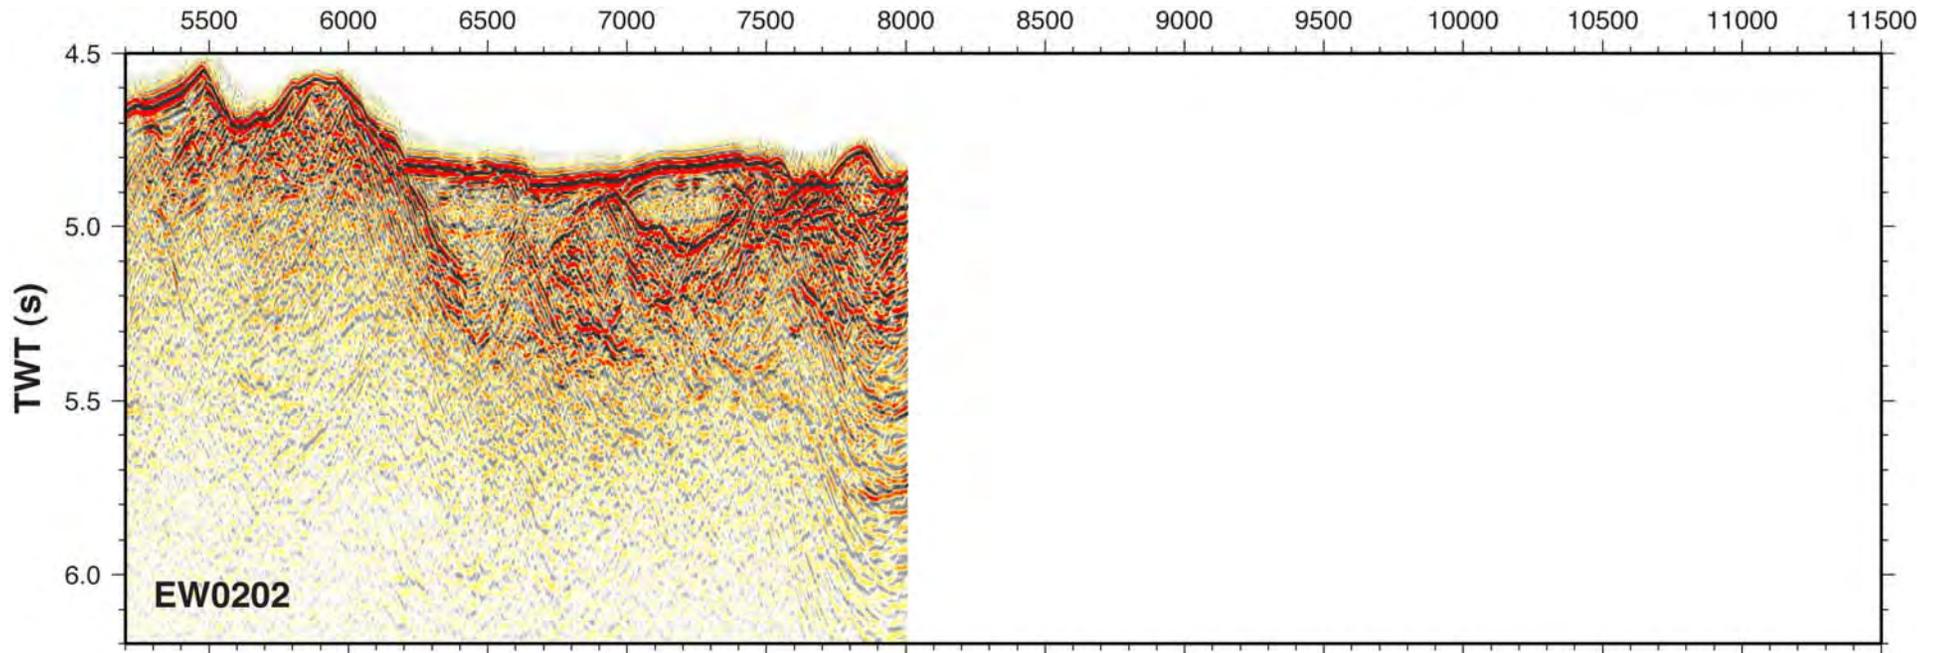

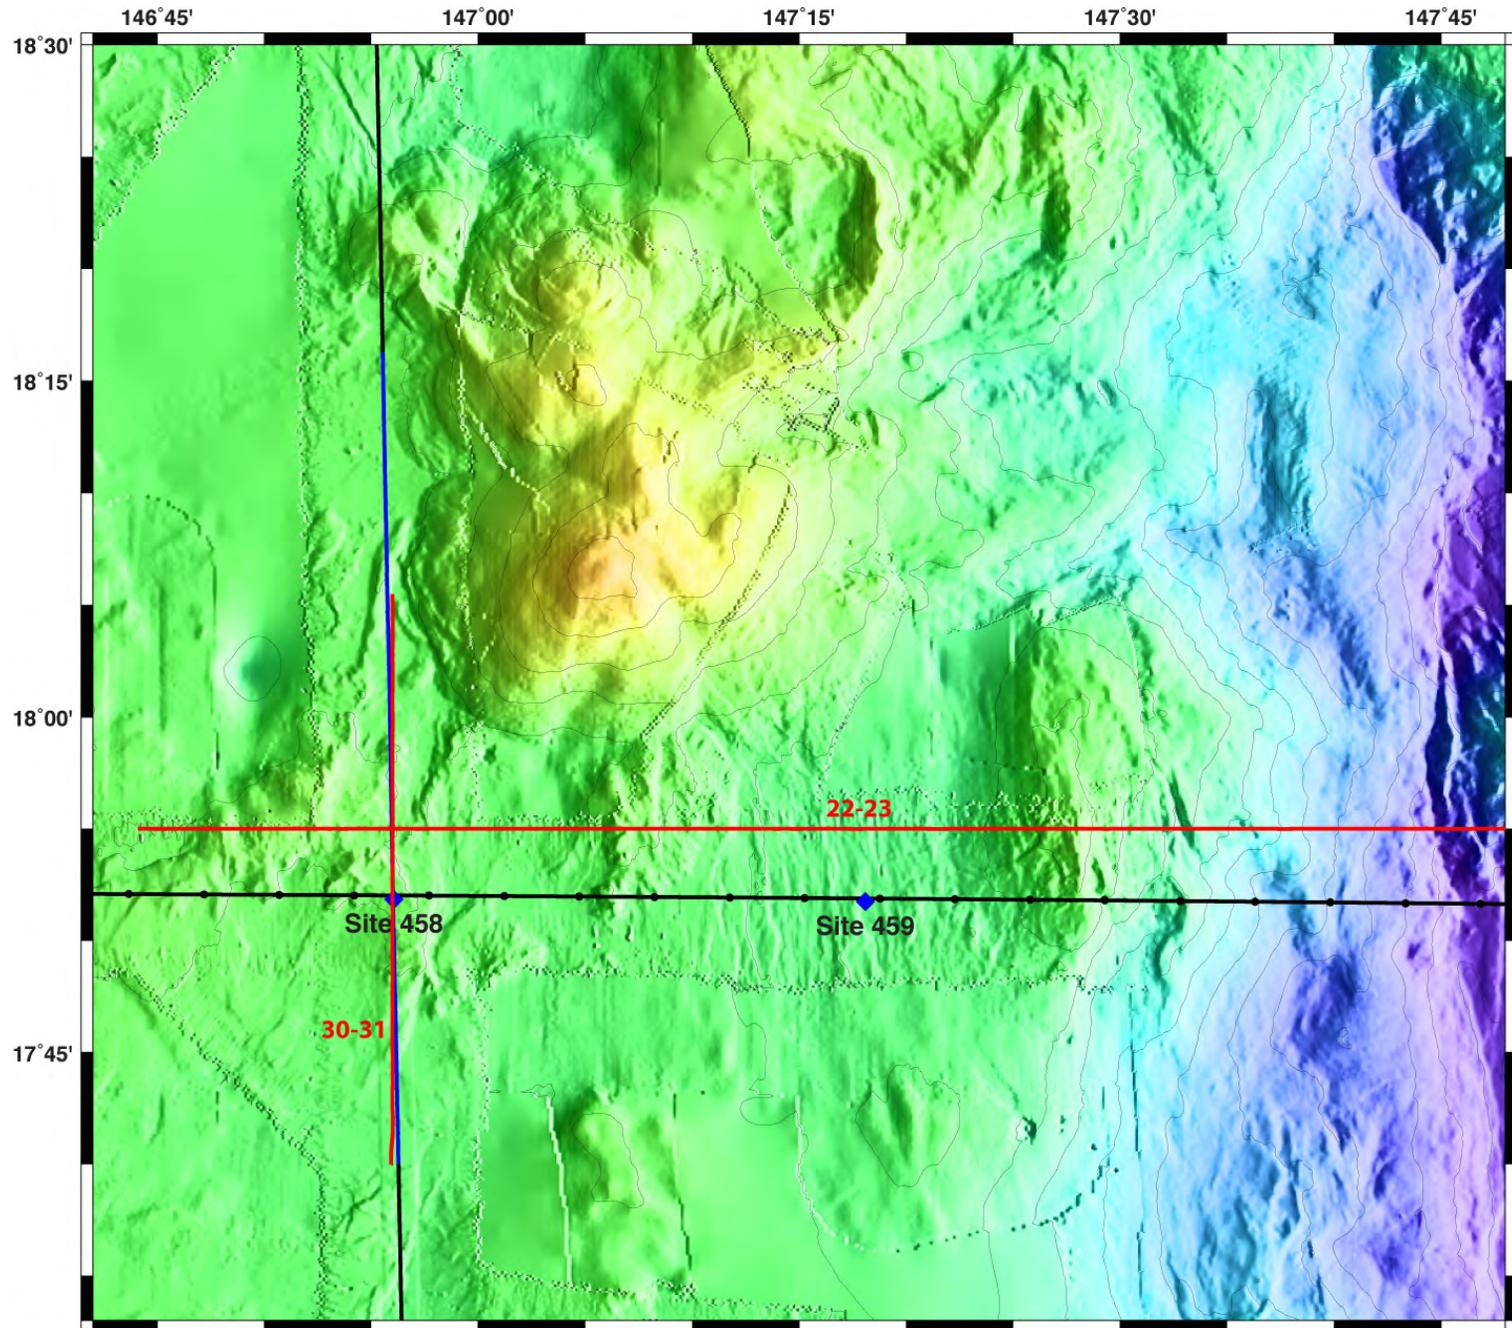

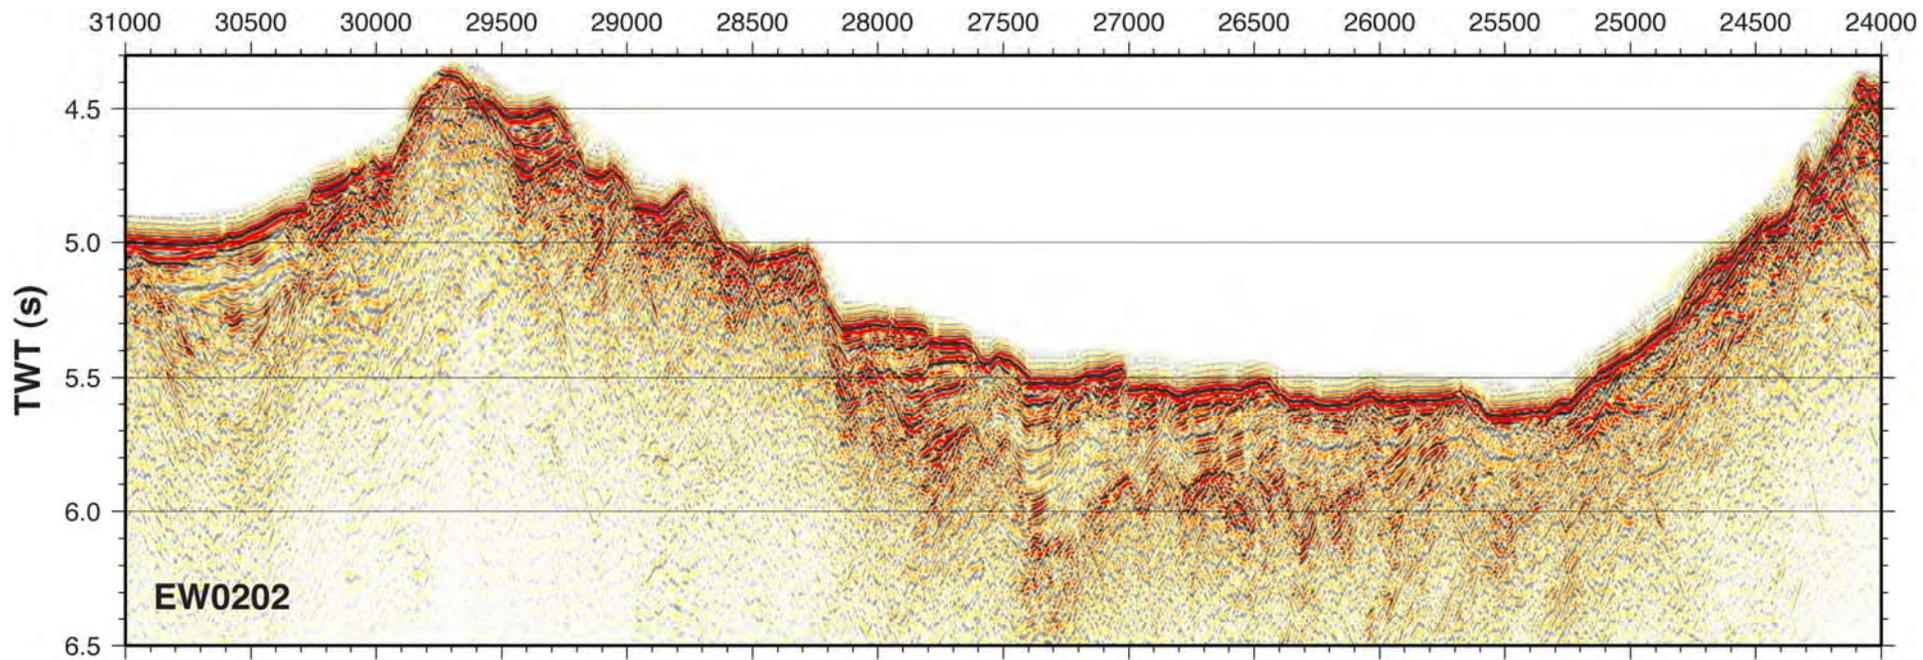

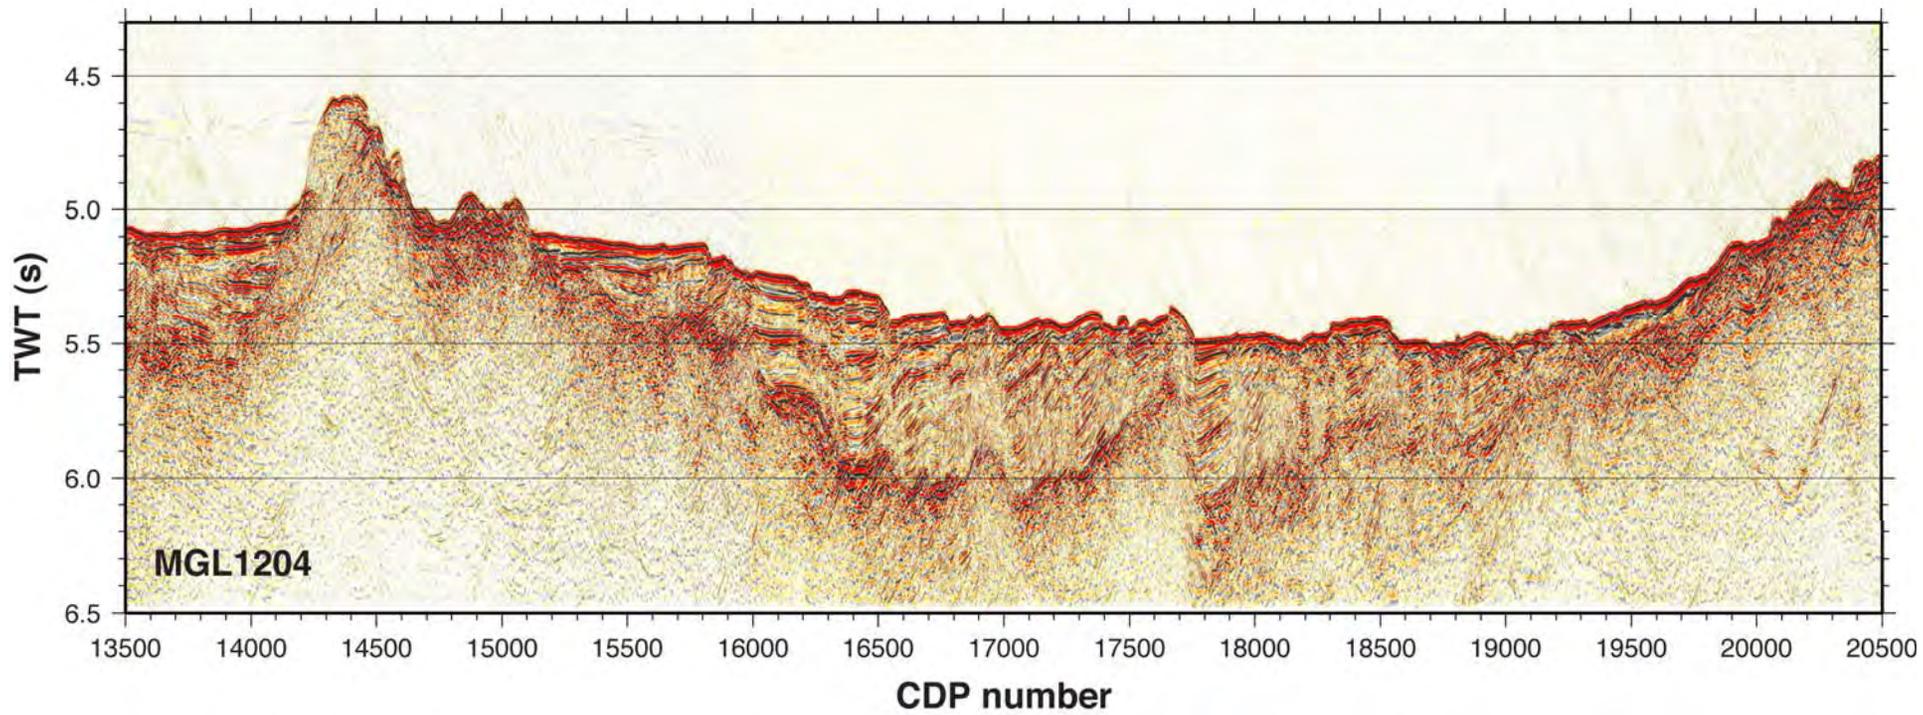

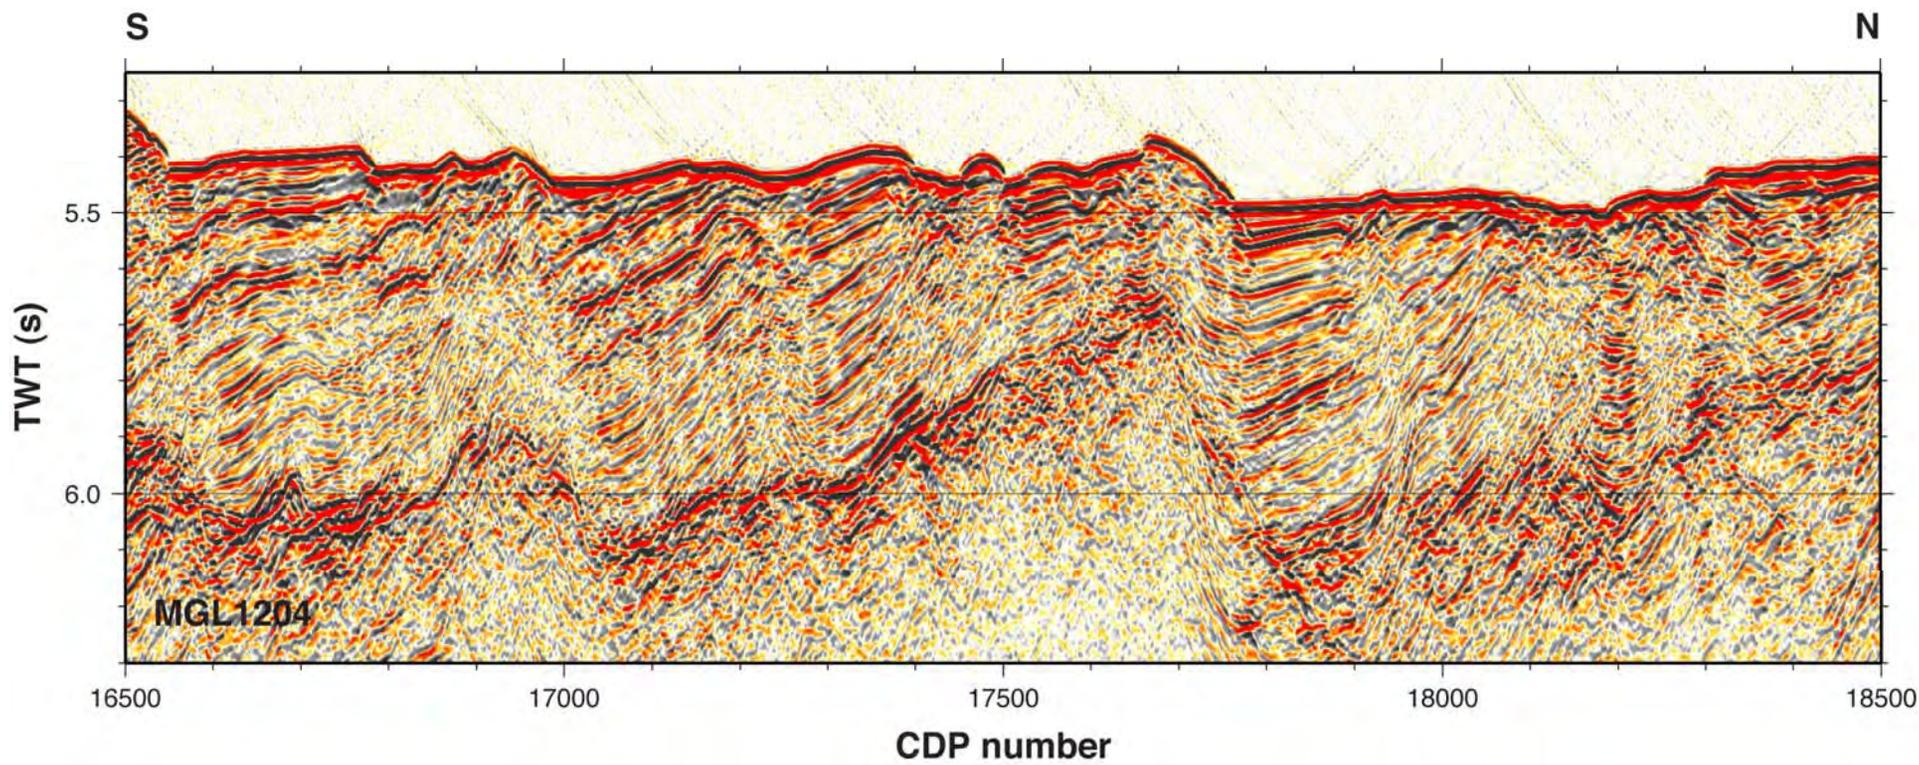

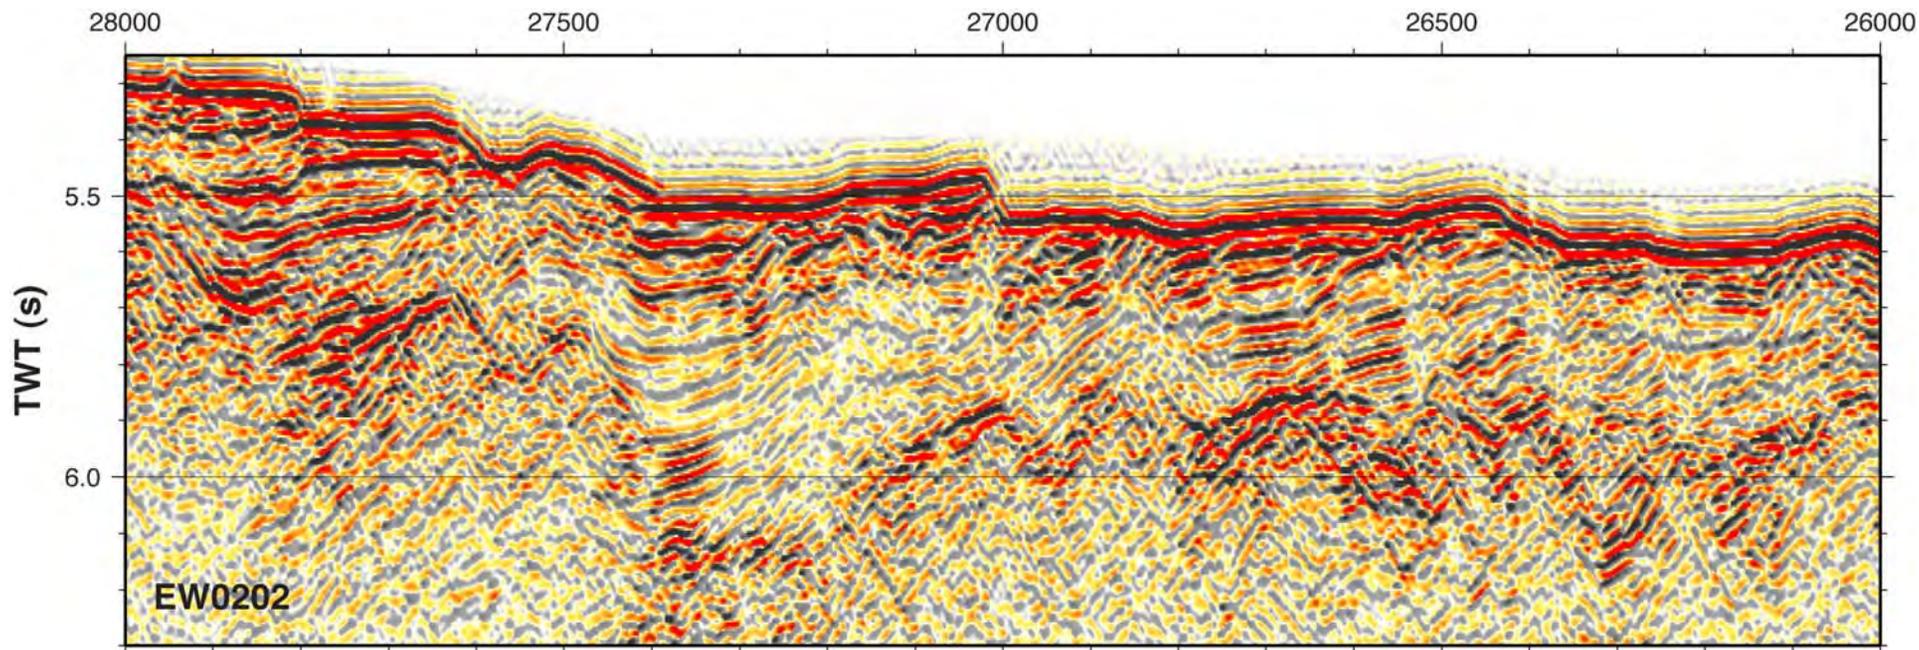

W

E

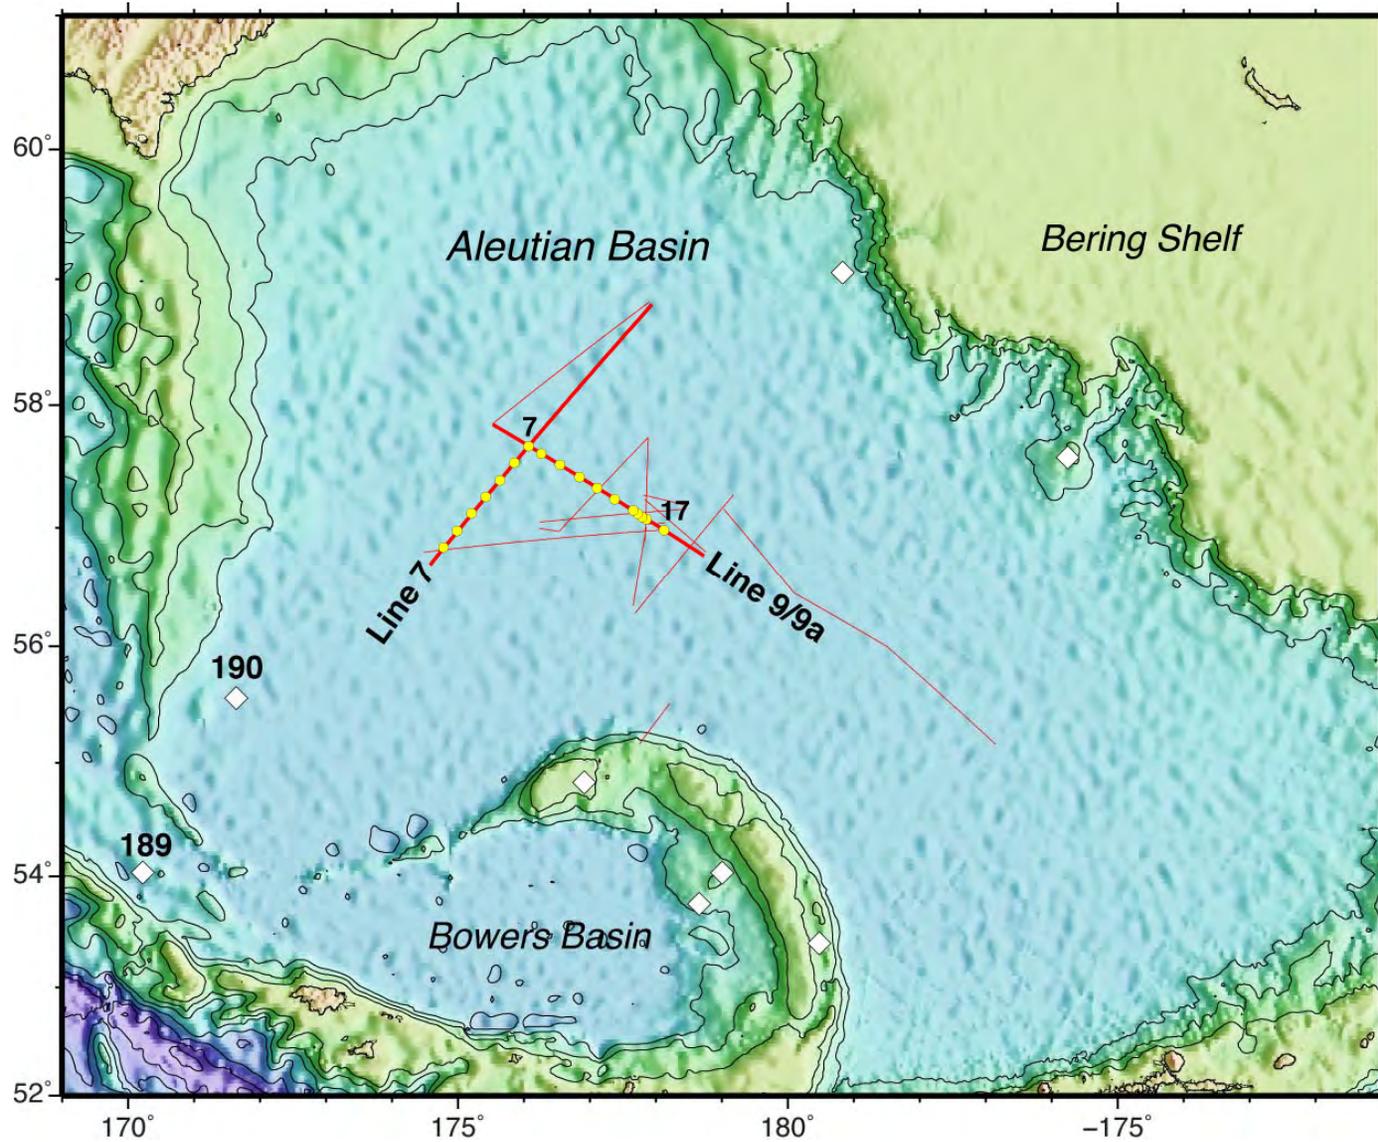

CDP number

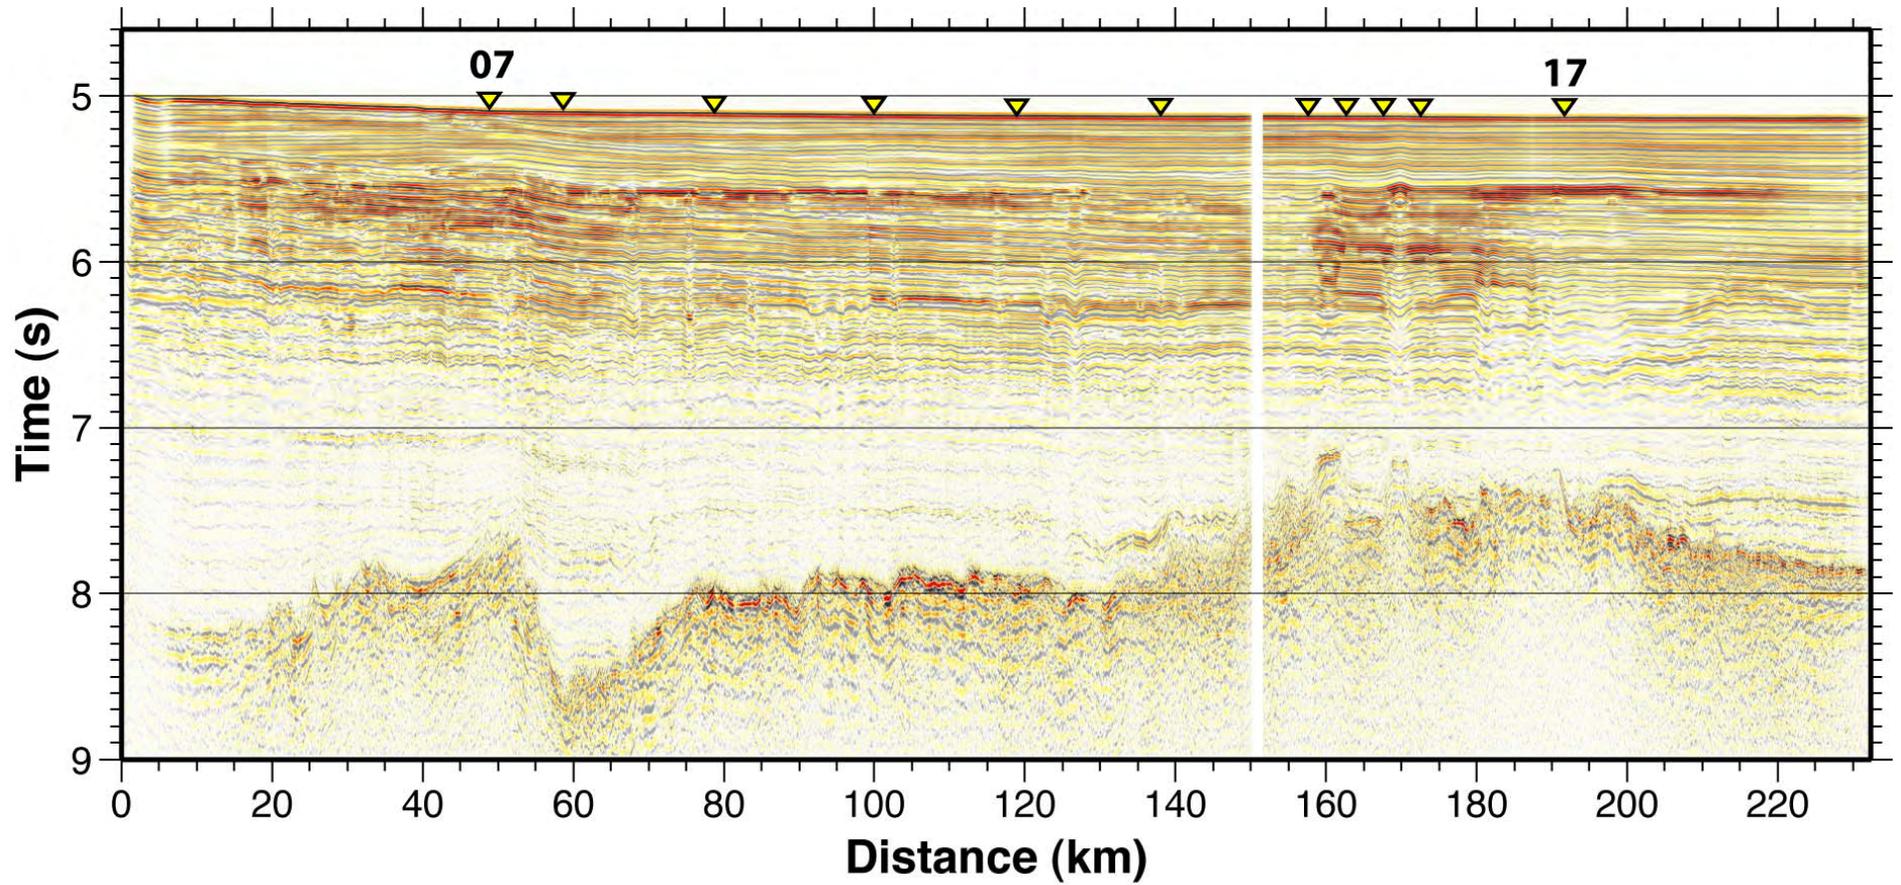

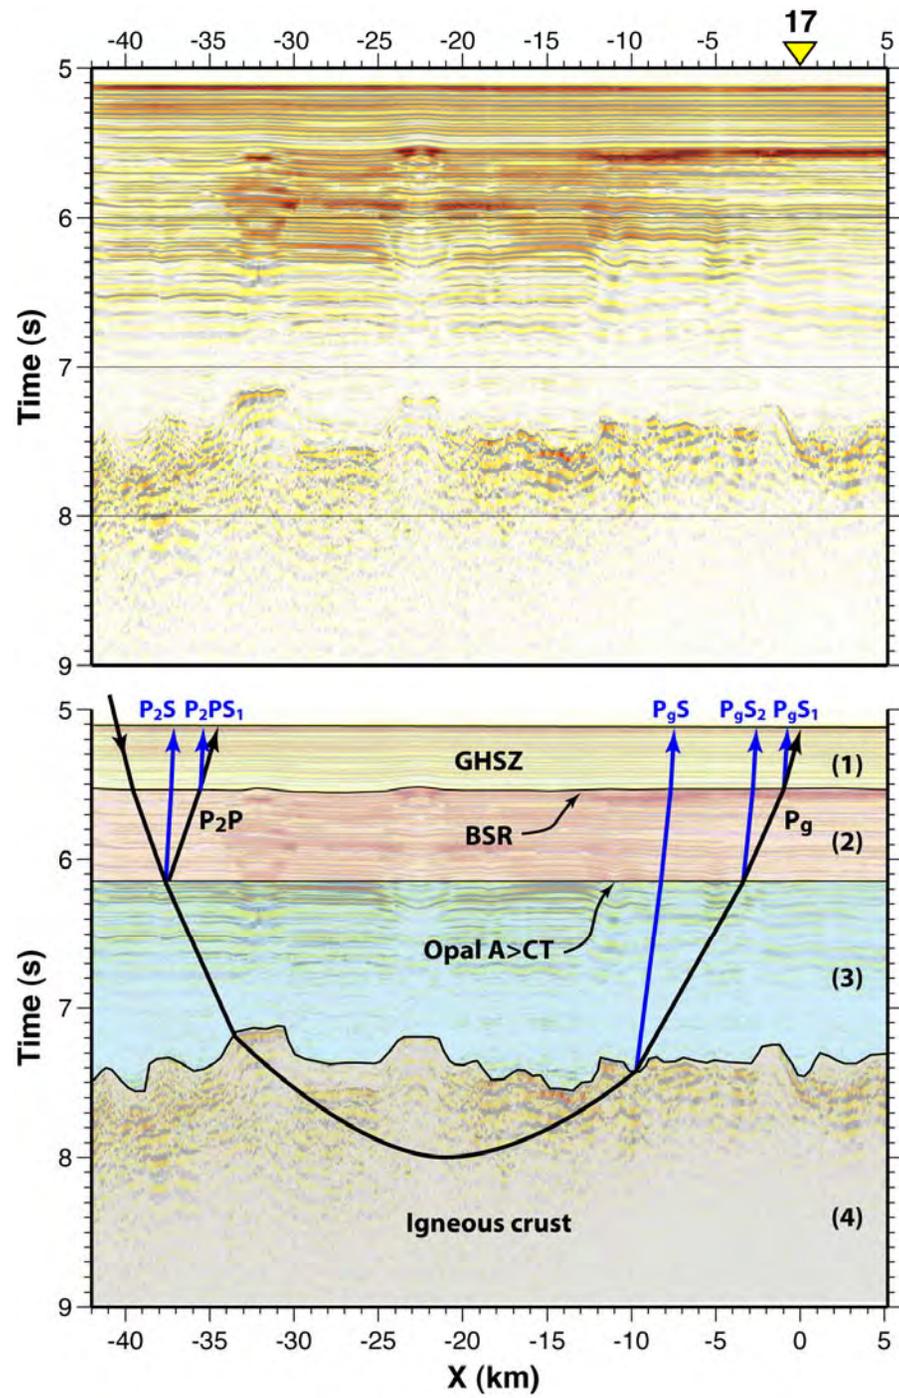

Aleutian Basin (MGL1111): USGS, Barth et al.

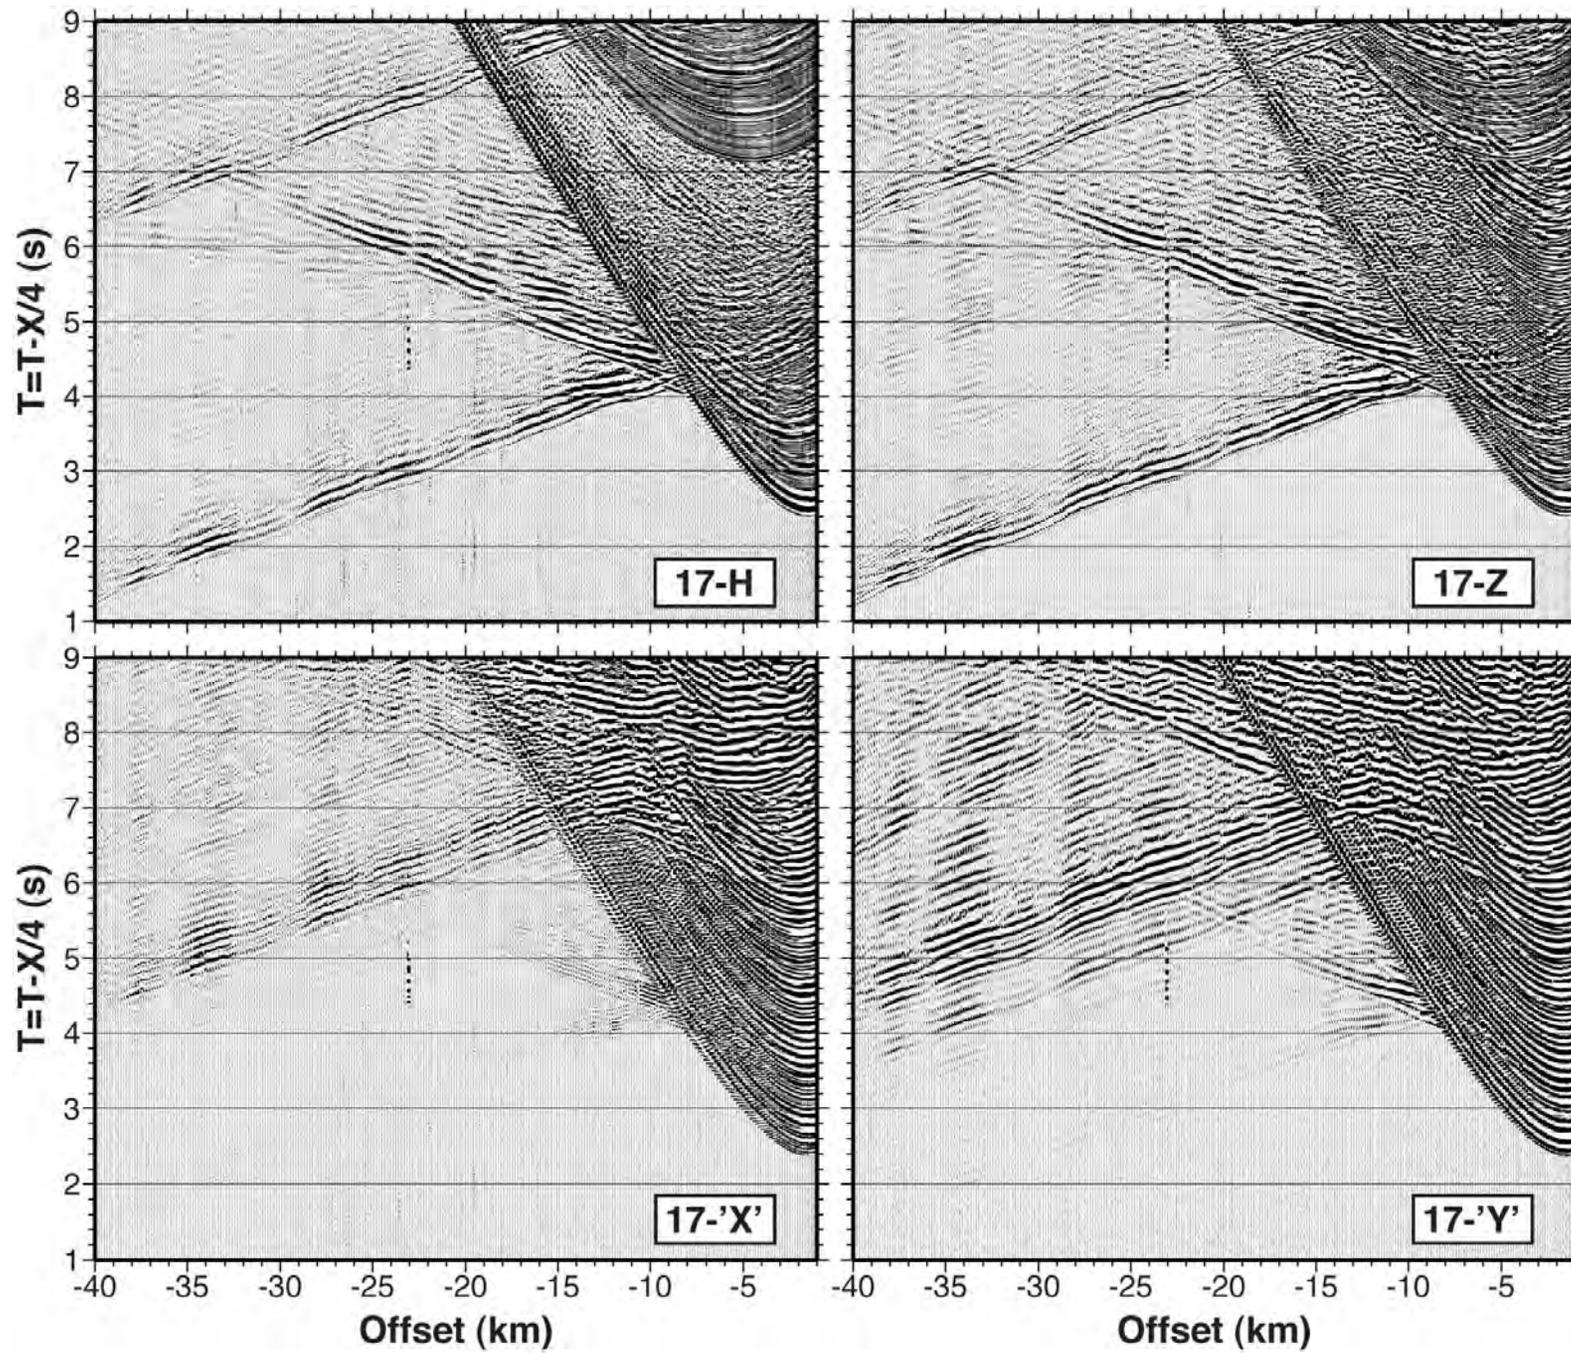

The value of *high-res MCS* plus a *deep-penetrating source* for shallow targets

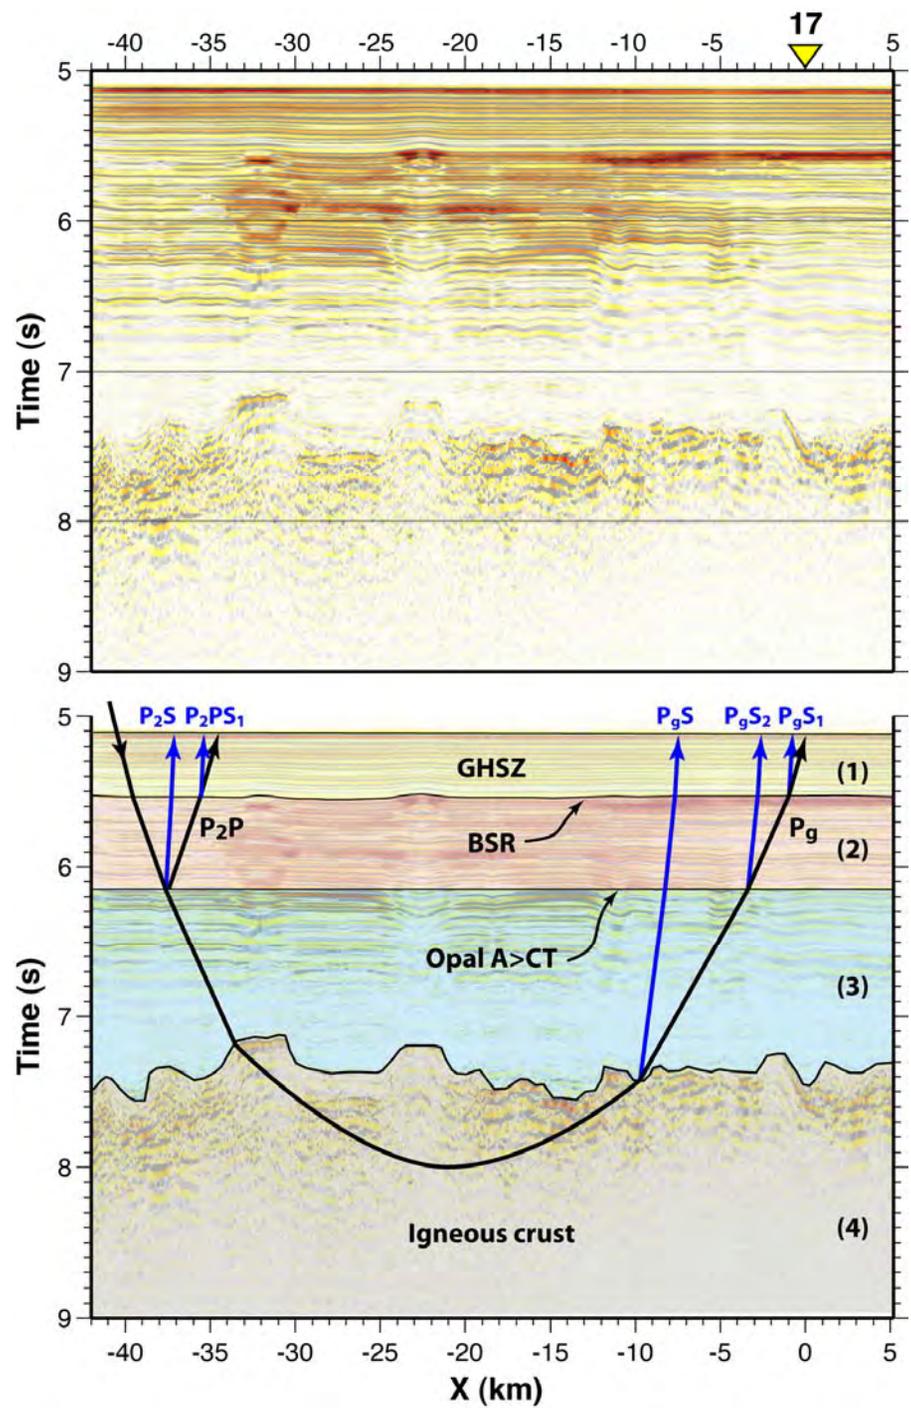

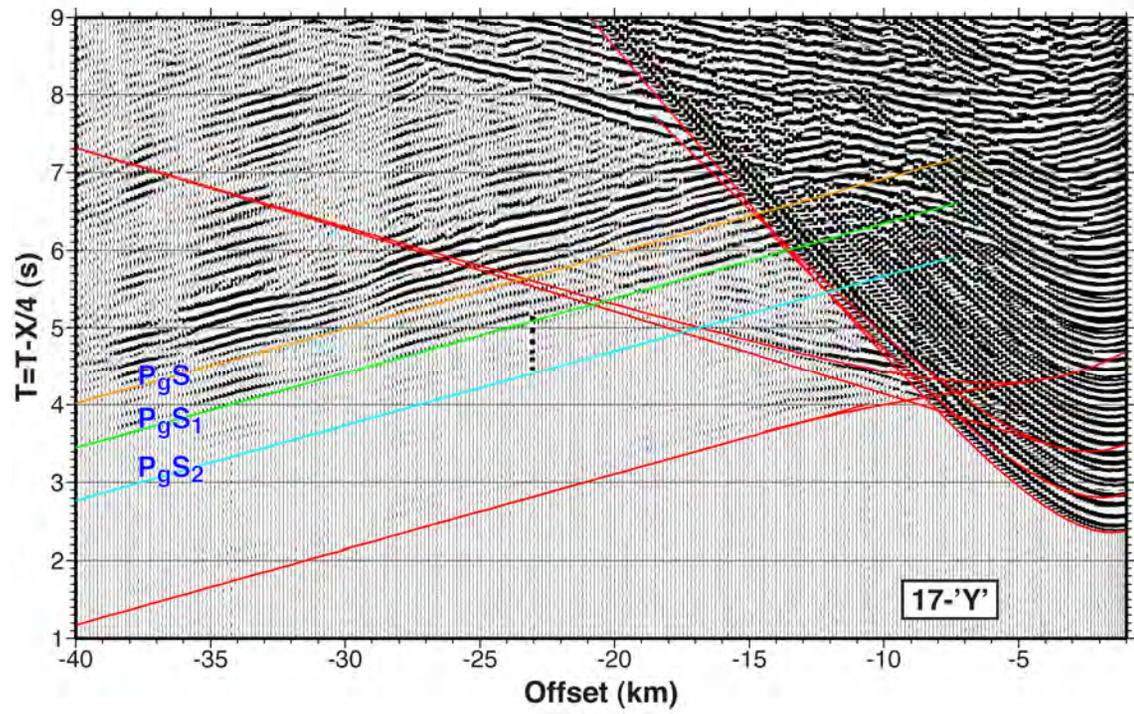

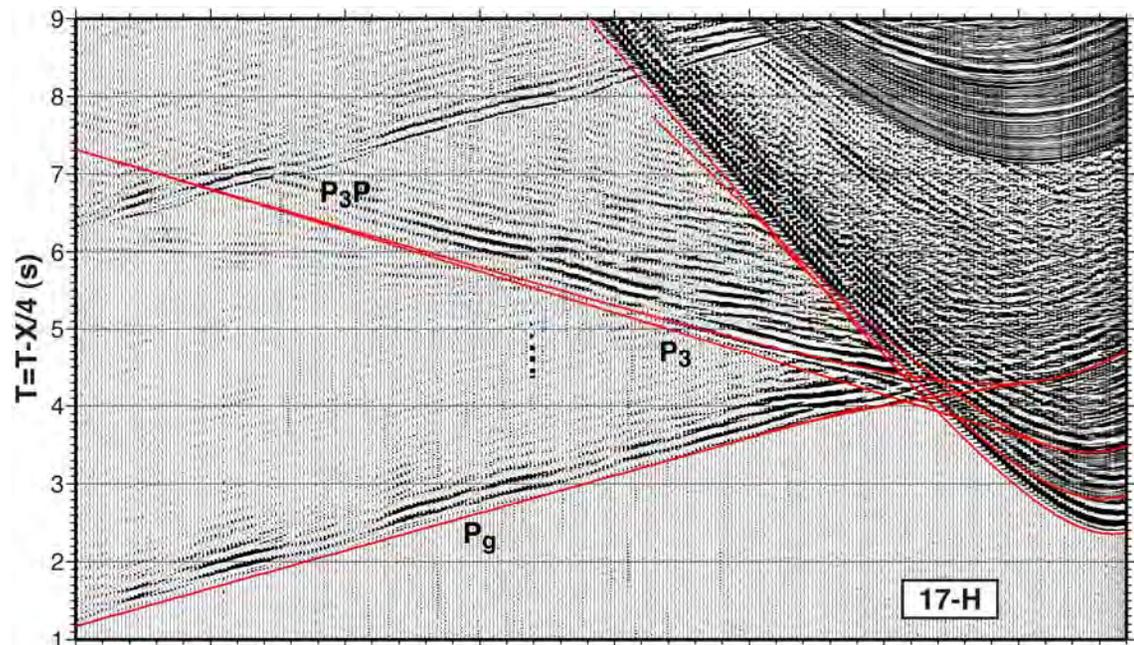

MGL1111: Line 09/09A

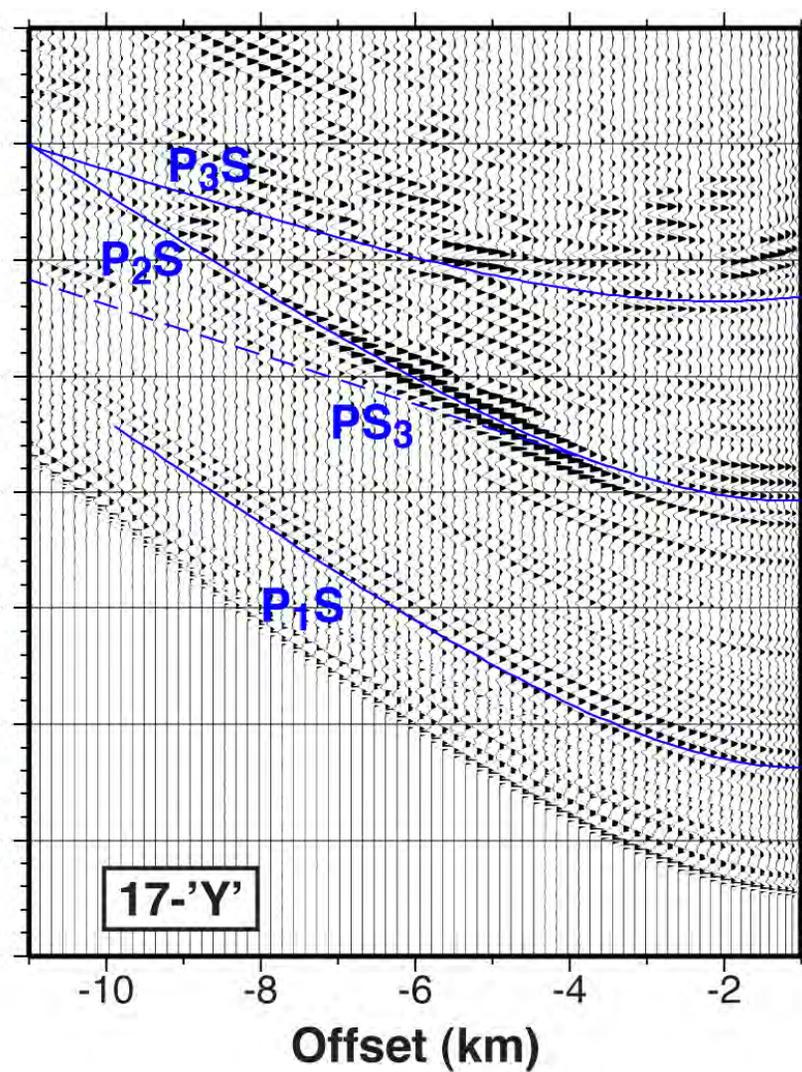

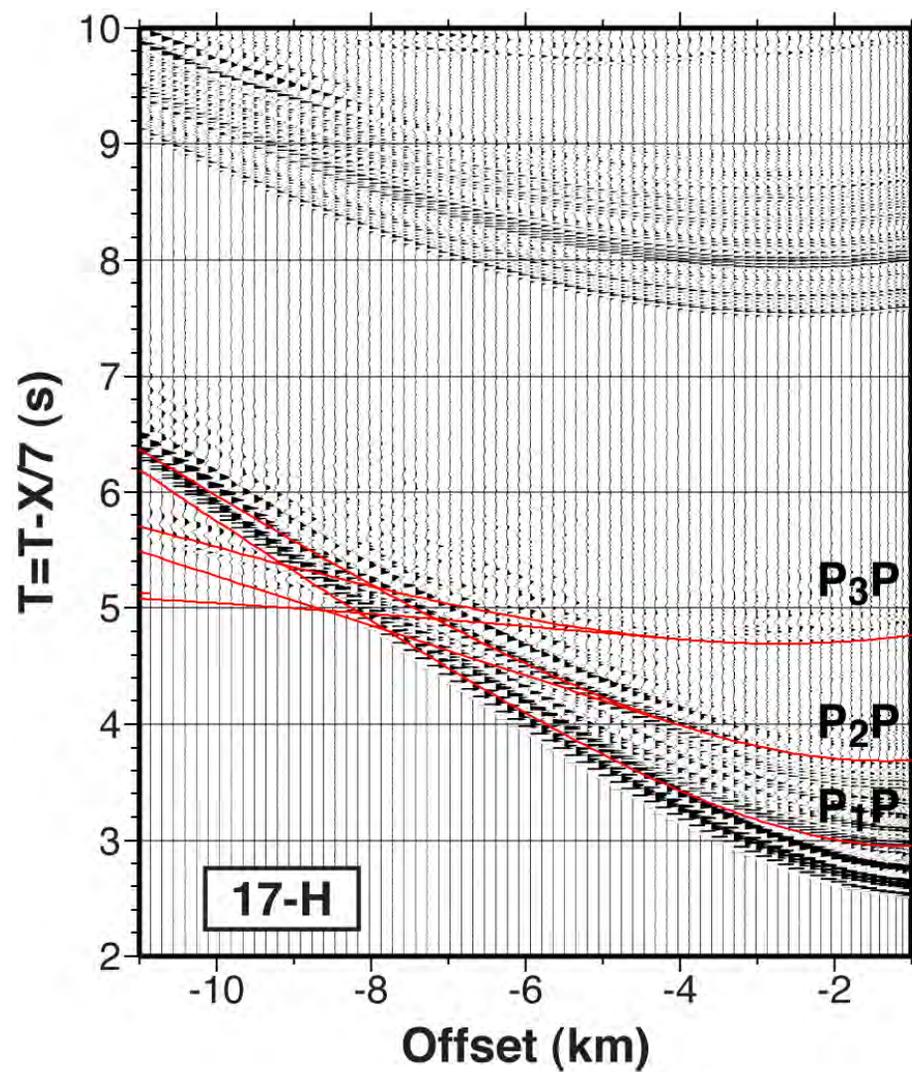

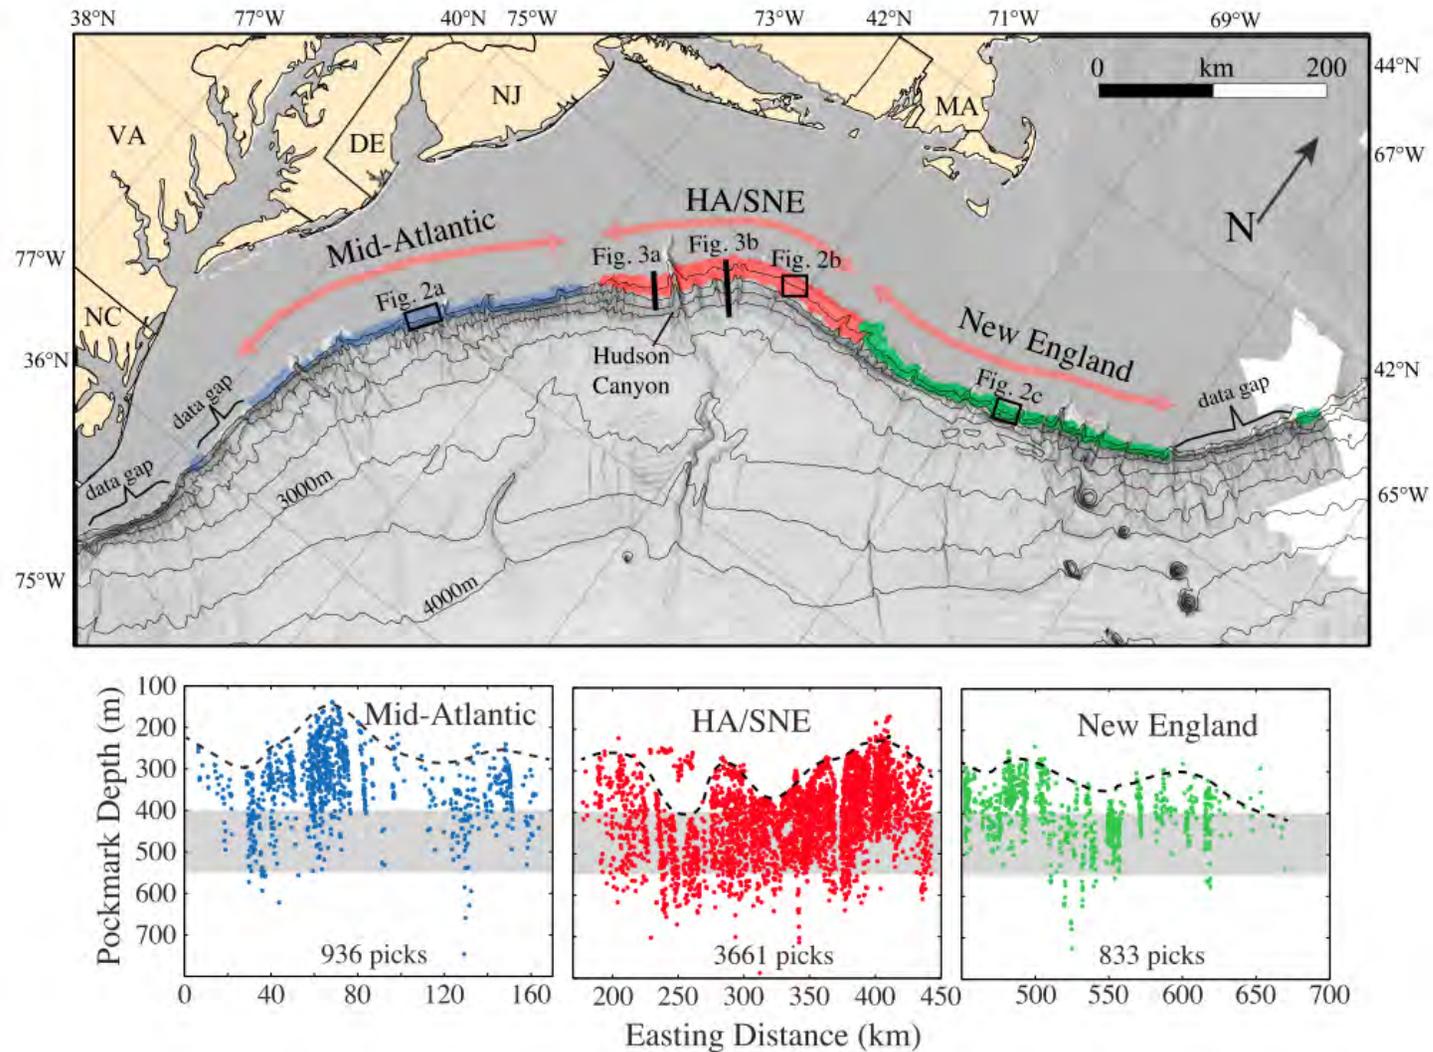

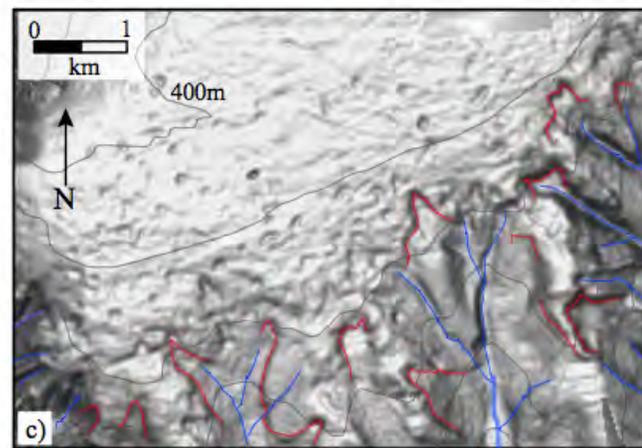

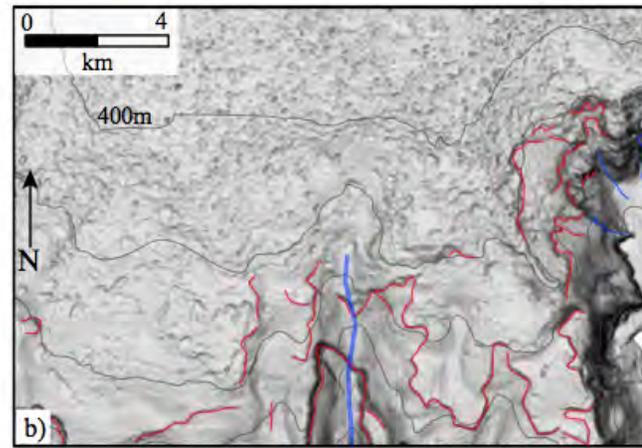

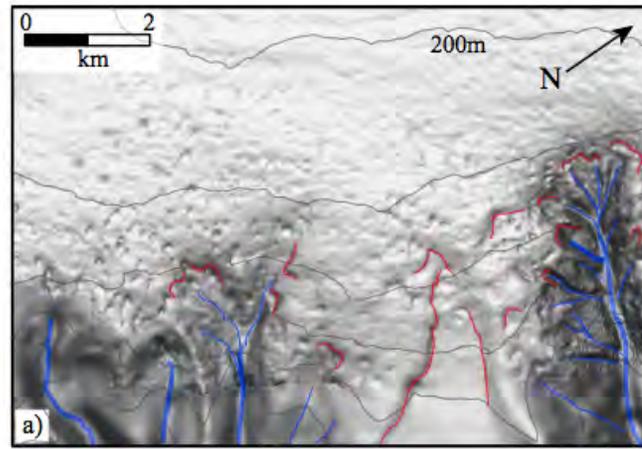

Offset (km)

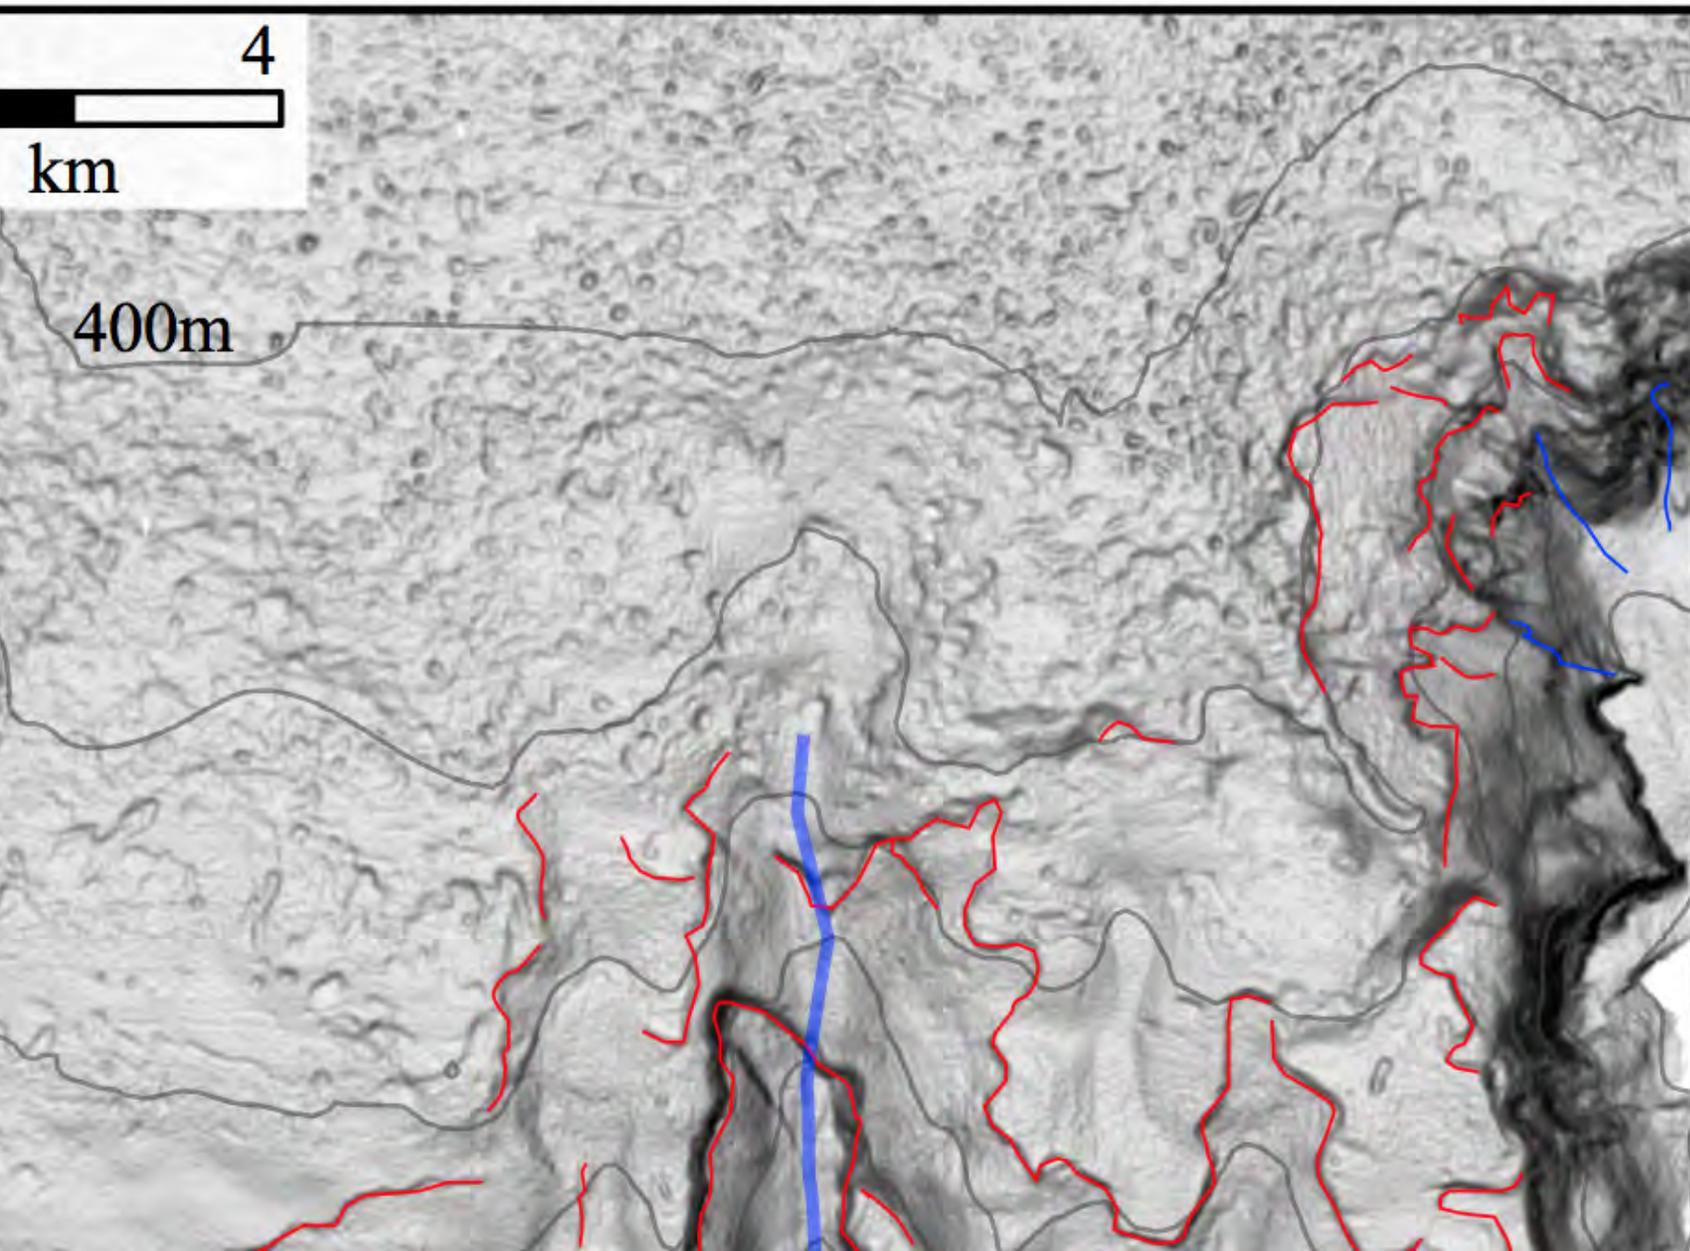

Seabed fluid expulsion along the upper slope and outer shelf of the U.S. Atlantic continental margin

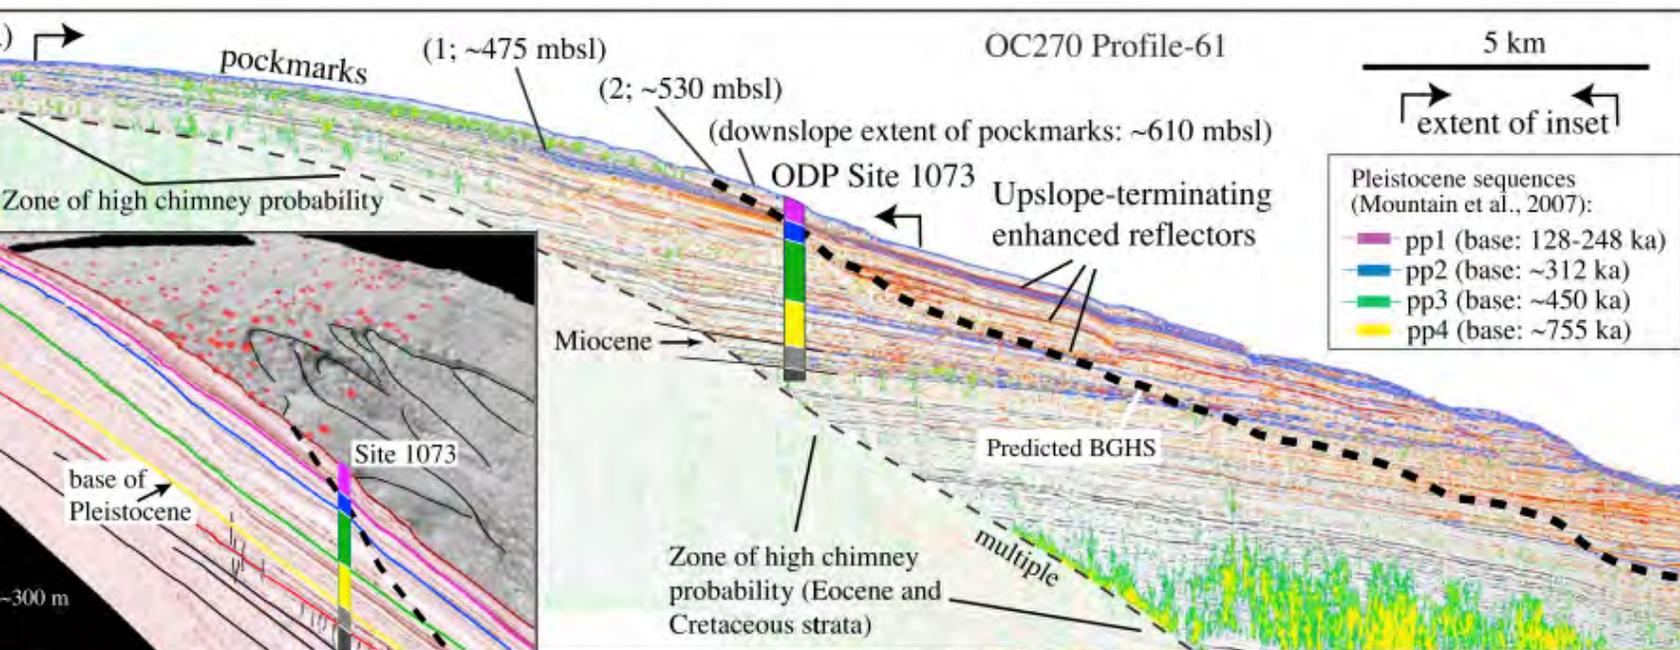

D. S. Brothers,¹ C. Ruppel,¹ J. W. Kluesner,² U. S. ten Brink,¹ J. D. Chaytor,¹ J. C. Hill,³
B. D. Andrews,¹ and C. Flores¹

BROTHERS ET AL.: U.S. ATLANTIC MARGIN FLUID EXPULSION

Spread methane leakage from the sea floor along the northern US Atlantic margin

J. Ruppel², M. Kodis³, D. Brothers⁴ and E. Lobecker⁵
