

## **UNOLS Inventory of Small Research Vessels**

This inventory includes small research vessels from 35 feet to 100 feet located at UNOLS institutions. One of the purposes for this inventory is to assist researchers in finding the best platform for their science. We have divided the country into regions for collecting and maintaining the inventory. The inventory information contains, as a minimum, the vessels name, length, location and contact point.

This inventory of small research vessels has been organized by geographic regions. The listing of these vessels does not certify that they are UNOLS approved, but rather that they are available for scientific programs. UNOLS certification can be coordinated through the listed contact person.

**Updated: November 2018**
